It is also suitable for ServiceNow administrators, developers, and consultants who work with ServiceNow hardware asset management solutions. By obtaining this certification, candidates can demonstrate their expertise in the ServiceNow platform and improve their job prospects.

ServiceNow Certified Implementation Specialist - Hardware Asset Management Sample Questions (Q40-Q45):

NEW QUESTION # 40
When running an asset audit, you receive the result of 10 "Scanned and expected" assets. What does this mean?

- A. You expected 10 assets during your audit inventory and scanned 10 assets, but none of them have a record in your ServiceNow instance.
- B. You expected 10 assets in your inventory and scanned 10 assets during your audit, but none of them are on your expected inventory list.
- C. You expected 10 assets in your inventory and scanned these 10 assets during your audit.
- D. You scanned 10 assets in your inventory, but none of them were on your expected inventory list.

Answer: C

Explanation:
* According to the Hardware Asset Management documentation, an asset audit is a process of verifying the physical existence and location of assets in an organization.
* The asset audit results show the status of each scanned asset, such as "Scanned and expected",
"Scanned and not expected", "Expected and not scanned", or "Not expected and not scanned".
* The status of "Scanned and expected" means that the asset was both expected to be in the inventory and scanned during the audit, indicating a match between the physical and the logical inventory.
* Therefore, if you receive the result of 10 "Scanned and expected" assets, it means that you expected 10 assets in your inventory and scanned these 10 assets during your audit, as stated in option B. References:

NEW QUESTION # 41
Once a Catalog Item has been requested, what mechanism determines the approvals, and tasks that are triggered in the application?

- A. Processes
- B. Procedures
- C. Flows
- D. Actions
- E. Scripts

Answer: C

Explanation:
Once a catalog item has been requested, the mechanism that determines the approvals and tasks that are triggered in the application is the flow12.
A flow is a graphical representation of a business process that consists of one or more actions, such as approvals, tasks, notifications, scripts, etc., that are executed based on certain conditions and triggers12.
A flow can be associated with a catalog item to define the fulfillment process for that item, such as who needs to approve it, what tasks need to be performed, and what notifications need to be sent12.
A flow can be created and managed using the Flow Designer, a low-code development tool that allows users to design and test flows without writing any code12.
A flow can be activated or deactivated, versioned, and published to make it available for use12.
A flow can be monitored and debugged using the Flow Execution Details and the Flow Logs12. References:
Flow Designer
Service Catalog Request Fulfillment

NEW QUESTION # 42
What is a requirement for sourcing a request from the requester's local stockroom?

- A. The requested stock must be in transit from a vendor
- B. The requested stock must be in transit from a remote stockroom
- C. The requested stock must be available via transfer order from a remote stockroom
- D. The requested stock must be available in the local stockroom

Answer: D

NEW QUESTION # 43

What is the primary goal of the Inventory tab of the Hardware Asset Management dashboard?

- A. Show the value from bulk purchasing
- B. Help the asset manager process purchase orders
- C. Help the stock manager process transfer orders
- D. Show the value from maintaining inventory
- E. Help the asset manager generate reports

Answer: D

Explanation:
According to the ServiceNow Hardware Asset Management documentation, the Inventory tab of the Hardware Asset Management dashboard provides a comprehensive view of the inventory functions, such as asset audits, disposal orders, stock orders, and shipments. The primary goal of this tab is to show the value from maintaining inventory, such as reducing costs, improving service delivery, and optimizing asset utilization. The Inventory tab also helps users to take inventory-related actions, such as creating or managing stock orders, disposal orders, or shipments, scanning assets with a mobile device, and assigning assets to pallets.

NEW QUESTION # 44
What core table requires migration when extending ITSM Asset Management with Hardware Asset Management?

- A. alm_asset
- B. alm_hardware
- C. cmdb_model_category
- D. No migration is required

Answer: D

Explanation:
* The core table that requires migration when extending ITSM Asset Management with Hardware Asset Management is the alm_asset table1.
* The alm_asset table stores the records of all the assets in the system, regardless of their type or class1.
* When you activate the Hardware Asset Management plugin, a migration script runs that converts the existing asset records in the alm_asset table to hardware asset records in the alm_hardware table2.
* The alm_hardware table is a child table of the alm_asset table that stores the records of the hardware assets only2.
* The migration script also updates the references and relationships of the migrated assets to the new table2.
* The migration script runs only once and does not affect the future creation or update of asset records2. References:
