100% Pass CompTIA - 220-1201 –High Hit-Rate Latest Learning Material

You can try our 220-1201 study demo for free. There is no any personal information required from your side. The 220-1201 complete study material contains comprehensive test information than the demo. So if you are interested with our 220-1201 free demo then go for the 220-1201 complete questions & answers. We will give you the best offer for the 220-1201 practice dumps. 100% pass with 220-1201 training dumps at first time is our guarantee.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q182-Q187):

NEW QUESTION # 182

A technician is troubleshooting a network issue. Users report that the connection keeps dropping and reconnecting every few seconds. The technician:

- Verifies the network configuration settings are correct on the workstation
- Tests the network cable from the workstation to the switch and finds no issues
- Uses a known-good workstation on the existing network cable and replicates the reported issue

Which of the following should the technician do next?

- A. Add new network hardware to reduce congestion
- B. **Check the network logs for evidence of port flapping.**
- C. Validate the environment for external interference.
- D. Assign a static IP to the impacted workstations.

Answer: B

Explanation:

Since the NIC, cable, and workstation configuration have all been ruled out, and the problem persists even with a known-good PC on the same switch port, this behavior points to an unstable link at the switch itself (often called "port flapping"). Examining the switch's event or syslog will reveal if the port is constantly going up and down, confirming a hardware or configuration issue on the switch side.

NEW QUESTION # 183

Which of the following describes the function of an injector?

- A. To provide only data connectivity
- B. To improve wireless performance
- C. **To supply power across a cable**
- D. To extend a network connection

Answer: C

Explanation:

A PoE injector is used to add power to an Ethernet cable, enabling the cable to deliver both power and data. This is crucial when connecting to PoE-enabled devices like IP cameras or wireless access points that are far from power outlets.

NEW QUESTION # 184

A computer is experiencing random shutdowns. A technician notices that the fans on the computer work but are noisy. The CPU temperature is about 122°F (50°C) when the computer is started but rises to 208°F (98°C) when applications are opened. Which of the following would most likely fix this issue?

- A. Replacing the power supply
- B. Adjusting the fan settings
- C. **Installing a high-performance heat sink**
- D. Adding more RAM to the computer

Answer: C

Explanation:

Excessive heat buildup due to insufficient cooling is a primary cause of unexpected shutdowns. A high-performance heat sink

improves thermal transfer, dissipates more heat, and helps maintain CPU temperature within safe limits. When CPU temperatures reach levels like 208°F (98°C), the system may shut down to prevent damage.

NEW QUESTION # 185

A customer reports that a text-only document prints with unrecognizable characters. The print preview correctly displays the document. Which of the following is the most likely cause of the issue?

- A. Bad toner cartridge
- B. Outdated firmware
- C. Corrupted document file
- D. Incorrect driver

Answer: D

NEW QUESTION # 186

A technician upgrades a PC with two DIMMs, for a total of 32GB. After installing the two DIMMs, the user notices the OS is reporting only 16GB. Which of the following tasks should the technician perform to resolve the issue in the most rapid, cost-effective way possible?

- A. Reinstall RAM in different slots.
- B. Update the OS to the latest version
- C. Replace the faulty motherboard
- D. Roll back recent system updates

Answer: A

Explanation:

If newly installed RAM is not fully recognized, the most likely cause is incorrect installation or incompatible slots. Reseating or reinstalling the RAM modules in the correct slots can quickly resolve the issue without extra cost.

From CompTIA A+ 220-1101 Official Study Guide, Objective 3.2 - Install and configure PC components:

"If memory is not detected, check installation and reseat modules. Ensure they are placed in the correct, matched slots for dual-channel operation." Verified Source:
