With 1z0-1093-25 study engine, you will get rid of the dilemma that you work hard but cannot improve. With our 1z0-1093-25 learning materials, you can spend less time but learn more knowledge than others. 1z0-1093-25 exam questions will help you reach the peak of your career. Just think of that after you get the 1z0-1093-25 Certification, you will have a lot of opportunities of going to bigger and better company and getting higher incomes! what a brighter future!

## Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.</li> </ul>

## 1z0-1093-25 Test Vce | Minimum 1z0-1093-25 Pass Score

The memory needs clues, but also the effective information is connected to systematic study, in order to deepen the learner's impression, avoid the quick forgetting. Therefore, we can see that in the actual 1z0-1093-25 exam questions, how the arrangement plays a crucial role in the teaching effect. The 1z0-1093-25 Study Guide in order to allow the user to form a complete system of knowledge structure, the qualification 1z0-1093-25 examination of test interpretation and supporting course practice organic reasonable arrangement together.

## Oracle Cloud Database Services 2025 Professional Sample Questions (Q51-Q56):

### NEW QUESTION # 51

Which two are valid storage options you must select when provisioning Exadata Database Service using the Oracle Cloud Infrastructure (OCI) Console?

- A. The number of CPUs required for the Exadata Database Service Instance.
- B. Data disk group encryption using Oracle Cloud Infrastructure Vault.**
- C. Data disk group compression and deduplication algorithm.
- D. The size of the DATA disk group and RECO disk group.**
- E. The database name and version.

**Answer: B,D**

Explanation:

A:Data disk group encryption using OCI Vault provides enhanced security for sensitive data by encrypting data stored within the Exadata storage cells.

B:During provisioning, the size of the DATA and RECO disk groups must be specified. The DATA disk group is used for primary database files, while the RECO disk group is used for recovery-related files.

Why the other options are incorrect:

\* C:CPU count is part of the compute configuration, not storage.

\* D:Compression and deduplication settings are managed at the database level, not during storage configuration.

\* E:Database name and version are part of the database configuration, not storage settings.

#### NEW QUESTION # 52

When a new security patch is released for the Oracle Database software on a BaseDB VM system, what is the recommended approach for applying it in a production environment?

- **A. Download the patch and apply it to a non-production environment that mirrors the production environment for testing before applying it to production.**
- B. Wait for Oracle Cloud Infrastructure to automatically apply the security patch to all BaseDB VM systems.
- C. Apply the patch to a production standby database (if one exists) and then failover to the patched standby.
- D. Immediately apply the patch directly to the production database during off-peak hours to minimize potential security vulnerabilities.

**Answer: A**

Explanation:

B: Testing patches in a non-production environment:

- \* Critical to ensure that the patch does not introduce performance issues or compatibility problems.
- \* Best Practice: Apply the patch to a staging environment that mirrors production, validate stability, and then proceed to production.
- \* Minimizes the risk of unplanned downtime or disruptions.

Why the other options are incorrect:

- \* A. Immediate application in production: Risky as untested patches might cause outages.
- \* C. Automatic patching by OCI: OCI does not automatically apply database patches; the customer must manage this.
- \* D. Patching the standby and failing over: While a good strategy when applicable, it still requires prior testing.

#### NEW QUESTION # 53

You are tasked with checking the status of the Exadata Database Service (ExaDB) components using the dcli utility. You need to gather information about the health and status of the database servers and storage cells across the ExaDB infrastructure. Which dcli command, combined with appropriate commands run across the nodes, will provide the most comprehensive overview?

- A. `dcli -g all "list status"`
- B. `dcli -g cell_group "list cell attributes name, status, metriccurrent"`
- **C. `dcli -g cell_group "list cell attributes name, status"` combined with `dcli -g dbnodes "srvctl status database -d dbname"`**
- D. `dcli -g dbnodes "list dbnodes"`

**Answer: C**

Explanation:

A: `dcli -g cell_group "list cell attributes name, status"` combined with `dcli -g dbnodes "srvctl status database -d dbname"` dcli Utility:

\* dcli (Distributed Command Line Interface) allows you to run commands on multiple nodes simultaneously.

\* cell\_group: A group configuration file listing all storage cells.

\* dbnodes: A group configuration file listing all database nodes.

Commands Explanation:

\* `dcli -g cell_group "list cell attributes name, status"`:

\* Retrieves the name and current status of each storage cell.

\* `dcli -g dbnodes "srvctl status database -d dbname"`:

\* Checks the status of the database instances on the compute nodes.

\* Combining these commands provides a complete picture of both storage and compute components.

Why the other options are incorrect:

- \* B. Including metriccurrent: Produces excessive output, not suitable for a quick health check.
- \* C. Listing dbnodes only: Insufficient as it lacks storage cell status.
- \* D. `dcli -g all "list status"`: Invalid syntax and lacks specificity.

#### NEW QUESTION # 54

What primary security mechanism within Oracle NoSQL Database Cloud Service governs access to individual tables, dictating which users or groups can perform specific actions?

- A. Transparent Data Encryption (TDE)
- B. Virtual Cloud Network (VCN) security lists
- C. Database Vault
- **D. Identity and Access Management (IAM) policies**

**Answer: D**

Explanation:

IAM Policies:

Oracle NoSQL Database Cloud Service uses OCI IAM policies to control access to tables. These policies specify who (user or group) can perform what actions (read, write, delete) on specific database resources. This centralized approach allows for granular permission control, supporting the principle of least privilege.

IAM policies are configured at the OCI tenancy level and can be customized to define access based on users, groups, and dynamic groups. They are essential for maintaining secure data access, especially in multi-tenant environments.

Why the other options are incorrect:

- \* A: VCN security lists control network traffic, not table-level access.
- \* C: Database Vault is for fine-grained access control within traditional Oracle Databases, not NoSQL.
- \* D: TDE handles data encryption, not access management.

### NEW QUESTION # 55

In a BaseDB environment configured with automatic backups, what happens to the automatic backups when the DB system is terminated?

- A. The retention of automatic backups after DB system termination is configurable during DB system creation.
- **B. All automatic backups are retained in object storage for a period determined by the original backup retention policy.**
- C. All automatic backups are immediately and permanently deleted from object storage.
- D. The most recent automatic backup is retained, while older backups are deleted.
- E. Automatic backups are migrated to a lower-cost archive storage tier.

**Answer: B**

Explanation:

Backup Retention Policy:

When a BaseDB system is terminated, automatic backups are not immediately deleted. Instead, they remain stored in OCI Object Storage for the duration specified by the backup retention policy that was configured at the time of database creation.

- \* This approach ensures that data can be recovered even after the database instance itself is terminated.
- \* Administrators can manually delete backups if they are no longer needed, but they are not automatically purged.

Why the other options are incorrect:

- \* A: Backups are not deleted instantly upon termination.
- \* B: All backups are retained as per the policy, not just the most recent.
- \* D: No automatic migration to archive tier occurs.
- \* E: Backup retention settings are defined during provisioning, but not dynamically configurable after termination.

### NEW QUESTION # 56

.....

You can install Oracle 1z0-1093-25 PRACTICE TEST file and desktop practice test software on your devices and easily start Oracle Cloud Database Services 2025 Professional (1z0-1093-25) exam preparation right now. Whereas the "Actualtests4sure" 1z0-1093-25 web-based practice test software is concerned, it is a simple browser-based application that works with all the latest web browsers. Just put the link of Actualtests4sure 1z0-1093-25 web-based practice test application in your browser and start Oracle 1z0-1093-25 exam preparation without wasting further time. The "Actualtests4sure" is quite confident that you will be the next successful Oracle Cloud Database Services 2025 Professional exam candidate.
