#### NEW QUESTION # 94

Cloud Kicks has updated several profiles and created a new app in the sandbox. After testing, everything is working as expected. Which two options should the administrator use to migrate these changes to production from the sandbox?

Choose 2 answers

- A. Package deployment
- B. Inbound Change Set
- C. Change Data Capture
- D. Outbound Change Set

**Answer: B,D**

Explanation:

Change sets are tools that allow administrators to move customizations such as fields, page layouts, profiles, permission sets, etc. from one Salesforce org to another. To use change sets, administrators need to establish a deployment connection between a source org (such as a sandbox) and a target org (such as production). Then, administrators can create an outbound change set in the source org that contains the components they want to deploy, and upload it to the target org. In the target org, administrators can view and validate the inbound change set before deploying it to their org. References: <https://help.salesforce.com/s/articleView?id=sf.changesets.htm&type=5>
