## EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q27-Q32):

### NEW QUESTION # 27

Question:

A company is implementing a new information security policy. They want to ensure that the policy aligns with its risk appetite, internal policies, and external regulations. Which framework can help the company achieve this goal?

- A. ITIL
- B. GDPR
- C. COBIT
- D. GRC

**Answer: D**

Explanation:

GRC stands for Governance, Risk, and Compliance. It's a comprehensive framework that helps organizations align their IT operations with business objectives, manage risks effectively, and ensure compliance with internal and external regulations.

\* GDPR: A specific regulation focusing on data protection and privacy in the EU.

\* COBIT: A framework for IT governance and management, but not as comprehensive in risk and compliance aspects.

\* ITIL: Focuses on IT service management, not directly on governance or compliance.

#### NEW QUESTION # 28

Question:

A company is looking for a continuous data protection solution that can provide any point-in-time recovery.

Which Dell solution is most suitable for this requirement?

- A. Dell Cloud Tier
- B. Dell TimeFinder SnapVX
- **C. Dell RecoverPoint**
- D. Dell SRDF

**Answer: C**

Explanation:

Dell RecoverPoint is a continuous data protection (CDP) solution that uses journaling to provide any point-in-time recovery of data. It continuously captures and replicates data changes, storing them in a journal to enable precise recovery to any required point in the past.

\* Dell SRDF (Symmetrix Remote Data Facility): Provides synchronous/asynchronous replication, not CDP.

\* Dell TimeFinder SnapVX: Creates point-in-time snapshots but doesn't offer continuous journaling.

\* Dell Cloud Tier: Used for archiving older data to the cloud.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Replication and CDP.

#### NEW QUESTION # 29

Question:

Which information is contained in a stub file?

- A. Address of the source file
- **B. Address of the archived file**
- C. Name and size of the archived file
- D. Hard drive address storing the archived file

**Answer: B**

Explanation:

A stub file is a small placeholder file that remains on primary storage after data has been archived or moved to secondary storage. It contains a pointer or address of the archived data's location.

When accessed, the data is transparently retrieved from the archive.

\* Address of the source file and other options do not accurately describe a stub file's purpose.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Data Archiving Solutions.

#### NEW QUESTION # 30

Question:

What information is available in a capacity planning report for storage infrastructure?

- **A. Current and historical information about the utilization of storage, file systems, and ports**
- B. Number of units of storage available, used, and the cost
- C. Equipment purchase dates, licenses, lease status, and maintenance records
- D. Current and historical performance information about IT components and operations

**Answer: A**

Explanation:

Capacity planning reports in storage environments focus on:

- \* Utilization trends of storage systems (e.g., used vs. available space)
- \* File system usage (volumes, file systems)
- \* Ports (SAN/NAS connections)

This enables proactive capacity management and ensures enough resources are available to meet future demands.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Storage Infrastructure Management - Capacity Management.

### NEW QUESTION # 31

Question:

An IT team needs to reduce or eliminate data frame loss during times of network congestion in their converged Ethernet network. What standard should they implement?

- A. QoS
- B. NAT
- **C. DCB**
- D. VLAN

**Answer: C**

Explanation:

Data Center Bridging (DCB) is a set of IEEE standards designed to enhance Ethernet for converged data center networks.

DCB includes priority-based flow control (PFC) to reduce frame loss during congestion.

Ensures lossless Ethernet transport, crucial for storage traffic (like FCoE).

- \* QoS (A) prioritizes traffic but doesn't guarantee lossless transport.
- \* NAT (C) translates IP addresses, not relevant to lossless transport.
- \* VLAN (D) segments networks logically but doesn't address congestion.
