

# Pass Guaranteed Quiz 2026 Valid ISACA AAISM: ISACA Advanced in AI Security Management (AAISM) Exam Fresh Dumps

What's more, part of that Easy4Engine AAISM dumps now are free: [https://drive.google.com/open?id=1jzcmumNGQjRvnhao5A-7uyW\\_lee\\_8r6P](https://drive.google.com/open?id=1jzcmumNGQjRvnhao5A-7uyW_lee_8r6P)

Now ISACA AAISM certification test is very popular. Not having got AAISM certificate, you must want to take the exam. Indeed, ISACA AAISM test is very difficult exam, but this is not suggested that you cannot get high marks and pass your exam with ease. Without knowing the shortcut of ISACA AAISM Exam, do you want to know the testing technique? As for the point, I can tell you that Easy4Engine ISACA AAISM study guide is your unique choice.

Have you ever used Easy4Engine ISACA AAISM Dumps? The braindump is latest updated certification training material, which includes all questions in the real exam that can 100% guarantee to pass your exam. These real questions and answers can lead to some really great things. If you fail the exam, we will give you FULL REFUND. Easy4Engine practice test materials are used with no problem. Using Easy4Engine exam dumps, you will achieve success.

## AAISM Exam Materials Preparation Torrent - AAISM Learning Prep - Easy4Engine

As is known to us, a suitable learning plan is very important for all people. For the sake of more competitive, it is very necessary for you to make a learning plan. We believe that our AAISM actual exam will help you make a good learning plan. You can have a model test in limited time by our AAISM Study Materials, if you finish the model test, our system will generate a report according to your performance. You can know what knowledge points you do not master. By the report from our AAISM study questions. Then it will be very easy for you to pass the AAISM exam.

### ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.</li></ul>

## ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q115-Q120):

### NEW QUESTION # 115

An organization utilizes AI-enabled mapping software to plan routes for delivery drivers. A driver following the AI route drives the wrong way down a one-way street, despite numerous signs. Which of the following biases does this scenario demonstrate?

- A. Selection
- B. Reporting
- C. Automation
- D. Confirmation

**Answer: C**

Explanation:

AAISM defines automation bias as the tendency of individuals to over-rely on AI-generated outputs even when contradictory real-world evidence is available. In this scenario, the driver ignores traffic signs and follows the AI's instructions, showing blind reliance on automation. Selection bias relates to data sampling, reporting bias refers to misrepresentation of results, and confirmation bias involves interpreting information to fit pre-existing beliefs. The most accurate description is automation bias.

AI Security Management Study Guide - Automation Bias in AI Use

### NEW QUESTION # 116

Which of the following BEST addresses risk associated with hallucinations in AI systems?

- A. Human oversight
- B. Content enrichment
- C. Recursive chunking
- D. Automated output validation

**Answer: A**

Explanation:

AAISM prescribes human-in-the-loop (HITL) controls as the primary safeguard for high-impact generative AI use cases to mitigate hallucination risk. Human oversight ensures critical outputs are reviewed, corrected, and approved before use, with accountability, escalation, and documented decision trails. Automated validators and enrichment help reduce errors but are secondary; recursive chunking is a prompting tactic, not a governance control.

References: AI Security Management™ (AAISM) Body of Knowledge: Responsible AI & Human Oversight; Generative AI Risk Controls-Approval Workflows and Human Review; AAISM Study Guide: Hallucination Risk Treatment with HITL and Approval Gates.

### NEW QUESTION # 117

An organization is updating its vendor arrangements to facilitate the safe adoption of AI technologies. Which of the following would be the PRIMARY challenge in delivering this initiative?

- A. Failure to adequately assess AI risk
- B. Insufficient legal team experience with AI
- C. Inability to sufficiently identify shadow AI within the organization
- D. Unwillingness of large AI companies to accept updated terms

**Answer: D**

Explanation:

In the AAISM guidance, vendor management for AI adoption highlights that large AI providers often resist contractual changes, particularly when customers seek to impose stricter security, transparency, or ethical obligations. The official study materials emphasize that while organizations must evaluate AI risk and build internal expertise, the primary challenge lies in negotiating acceptable contractual terms with dominant AI vendors who may not be willing to adjust their standardized agreements. This resistance limits the ability of organizations to enforce oversight, bias controls, and compliance requirements contractually.

AI Security Management Study Guide - Third-Party and Vendor Risk

### NEW QUESTION # 118

During the deployment of a generative AI platform, a risk assessment highlighted threats such as data leakage and prompt manipulation. Which of the following is the BEST way to ensure appropriate control selection?

- A. Apply AI-specific controls from external frameworks without customization and initiate monitoring to expedite compliance
- B. Rely primarily on vendor-provided security features and seek third-party certifications
- C. Postpone control selection until deployment and address risk through enhanced monitoring
- **D. Map identified AI threats to enterprise control catalogs and integrate AI-specific safeguards where gaps exist**

**Answer: D**

Explanation:

AAISM requires that control selection be threat-led and context-specific, aligning AI threats to the organization's existing enterprise control catalogs (security, privacy, resilience) and augmenting them with AI-specific safeguards where coverage is insufficient. This ensures consistency with the risk appetite, removes duplication, and closes AI-unique gaps (e.g., prompt injection, data leakage from context windows, model misuse). Generic reliance on vendors or uncustomized external frameworks does not ensure fit-for-purpose coverage, and deferring control selection to post-deployment contradicts proactive risk treatment.

References: AI Security Management (AAISM) Body of Knowledge - Governance & Program Controls; Control Selection and Tailoring; Threat-to-Control Mapping for AI Systems; Risk Appetite & Control Assurance Alignment.

### NEW QUESTION # 119

Which defense is MOST effective against cyberattacks that alter input data to avoid detection?

- A. Conducting periodic monitoring of decisions
- B. Restricting access to internal model parameters
- C. Applying differential privacy to training data
- **D. Enhancing model robustness through adversarial training**

**Answer: D**

Explanation:

AAISM lists adversarial training as the strongest method to harden models against input manipulation attacks.

By exposing models to adversarial examples during training, the system learns to resist evasion techniques.

Access restriction (B) protects confidentiality, not detection evasion. Monitoring (C) is reactive, not preventative. Differential privacy (D) protects individual data, not adversarial inputs.

### NEW QUESTION # 120

.....

With our numerous advantages of our AAISM latest questions and service, what are you hesitating for? Our company always serves our clients with professional and precise attitudes, and we know that your satisfaction is the most important thing for us. We always aim to help you pass the AAISM Exam smoothly and sincerely hope that all of our candidates can enjoy the tremendous benefit of our AAISM exam material, which might lead you to a better future!
