ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q349-Q354):

NEW QUESTION # 349

Your company performs penetration tests and security assessments for small and medium-sized businesses in the local area. During a routine security assessment, you discover information that suggests your client is involved with human trafficking. What should you do?

- A. Ignore the data and continue the assessment until completed as agreed.
- **B. Immediately stop work and contact the proper legal authorities.**
- C. Confront the client in a respectful manner and ask her about the data.
- D. Copy the data to removable media and keep it in case you need it.

Answer: B

Explanation:

Per CEH v13 Official Courseware - Module 01: Introduction to Ethical Hacking, ethical hackers and penetration testers are bound by legal and professional standards. When illegal activities such as human trafficking are discovered:

The ethical response is to cease operations and report the findings to the appropriate legal authorities.

Continuing work, ignoring the findings, or confronting the client personally is both unprofessional and may potentially expose the tester to legal liability.

NEW QUESTION # 350

An AWS security operations team receives an alert regarding abnormal outbound traffic from an EC2 instance. The instance begins transmitting encrypted data packets to an external domain that resolves to a Dropbox account not associated with the organization. Further analysis reveals that a malicious executable silently modified the Dropbox sync configuration to use the attacker's access token, allowing automatic synchronization of internal files to the attacker's cloud storage. What type of attack has likely occurred?

- A. Side-channel attack exploiting CPU cache
- B. Cryptojacking using Coin Hive scripts
- **C. Man-in-the-Cloud (MITC) attack**
- D. Cloud Snooper attack leveraging port masquerading

Answer: C

Explanation:

Man-in-the-Cloud (MITC) attacks target cloud synchronization services such as Dropbox, Google Drive, and OneDrive by manipulating authentication tokens instead of user passwords. CEH courseware explains that cloud storage clients rely heavily on sync tokens stored locally, which authorize access without user interaction. If an attacker replaces or injects a malicious token, they can hijack the victim's cloud account or redirect synced data to attacker-controlled locations. In this scenario, the EC2 instance continues to operate normally, but its Dropbox client silently synchronizes data to an external account using the attacker's token. This bypasses traditional defenses such as perimeter firewalls, credential monitoring, or user behavior analytics, because the synchronization process appears legitimate and authenticated. MITC attacks are uniquely stealthy, as they require no further compromise once the sync token is stolen or replaced. Other choices, such as Cloud Snooper or cryptojacking, do not match the described behavior. Therefore, this attack clearly aligns with a Man-in-the-Cloud attack.

NEW QUESTION # 351

Which of the following is a low-tech way of gaining unauthorized access to systems?

- A. Eavesdropping
- **B. Social Engineering**
- C. Sniffing
- D. Scanning

Answer: B

NEW QUESTION # 352

John, a professional hacker, performs a network attack on a renowned organization and gains unauthorized access to the target

network. He remains in the network without being detected for a long time and obtains sensitive information without sabotaging the organization. Which of the following attack techniques is used by John?

- A. threat Diversion theft
- **B. Advanced persistent theft**
- C. Spear-phishing sites
- D. insider threat

Answer: B

Explanation:

An advanced persistent threat (APT) may be a broad term used to describe an attack campaign within which an intruder, or team of intruders, establishes a foothold, long presence on a network so as to mine sensitive knowledge.

The targets of those assaults, that square measure terribly fastidiously chosen and researched, usually embrace massive enterprises or governmental networks. the implications of such intrusions square measure huge, and include:

Intellectual property thieving (e.g., trade secrets or patents)

Compromised sensitive info (e.g., worker and user personal data)

The sabotaging of essential structure infrastructures (e.g., information deletion) Total website takeovers Executing an APT assault needs additional resources than a regular internet application attack. The perpetrators square measure typically groups of intimate cybercriminals having substantial resource. Some APT attacks square measure government-funded and used as cyber warfare weapons.

APT attacks dissent from ancient internet application threats, in that:

They're considerably additional advanced.

They're not hit and run attacks-once a network is infiltrated, the culprit remains so as to realize the maximum amount info as potential.

They're manually dead (not automated) against a selected mark and indiscriminately launched against an outsized pool of targets.

They typically aim to infiltrate a complete network, as opposition one specific half.

More common attacks, like remote file inclusion (RFI), SQL injection and cross-site scripting (XSS), square measure oftentimes employed by perpetrators to ascertain a footing in a very targeted network. Next, Trojans and backdoor shells square measure typically wont to expand that foothold and make a persistent presence inside the targeted perimeter.

NEW QUESTION # 353

Which of the following tools are used for enumeration? (Choose three.)

- **A. SID2USER**
- B. Cheops
- C. SolarWinds
- **D. USER2SID**
- **E. DumpSec**

Answer: A,D,E

Explanation:

Enumeration is the process of extracting usernames, shares, services, and other system-specific information from a target system.

Tools used for enumeration include:

* B. USER2SID: Resolves a username to its associated Security Identifier (SID).

* D. SID2USER: Resolves an SID back to the corresponding username.

* E. DumpSec: A powerful GUI tool used to enumerate users, shares, and permissions on Windows systems.

From CEH v13 Courseware:

* Module 4: Enumeration

* Section: NetBIOS and Windows Enumeration Tools

CEH v13 Study Guide states:

"USER2SID and SID2USER are classic tools used to map usernames to SIDs and vice versa during Windows enumeration.

DumpSec can enumerate user accounts, group memberships, and shared resources on systems with open permissions." Incorrect

Options:

* A. SolarWinds: Primarily a network performance monitoring tool, not designed for enumeration.

* C. Cheops: A network mapping tool, not an enumeration utility.
