Valid SY0-701 Exam Bootcamp | Exam Sample SY0-701 Questions

You only need 20-30 hours to learn our SY0-701 test braindumps and then you can attend the exam and you have a very high possibility to pass the exam. For many people whether they are the in-service staff or the students they are busy in their job, family lives and other things. But you buy our SY0-701 prep torrent you can mainly spend your time energy and time on your job, the

learning or family lives and spare little time every day to learn our CompTIA Security+ Certification Exam exam torrent. Our answers and questions are compiled elaborately and easy to be mastered. Because our SY0-701 Test Braindumps are highly efficient and the passing rate is very high you can pass the exam fluently and easily with little time and energy needed.

CompTIA Security+ Certification Exam Sample Questions (Q89-Q94):

NEW QUESTION # 89

A security administrator is implementing encryption on all hard drives in an organization. Which of the following security concepts is the administrator applying?

- A. Authentication
- B. Integrity
- C. Zero Trust
- D. Confidentiality

Answer: D

Explanation:

Encrypting hard drives is a direct implementation of confidentiality, one of the three pillars of the CIA Triad emphasized in CompTIA Security+ SY0-701. Full disk encryption ensures that if a laptop, workstation, or server drive is stolen or accessed without authorization, the data remains unreadable without the decryption key.

This controls unauthorized disclosure and protects sensitive business, financial, and personal information.

Drive encryption is widely required for compliance frameworks such as HIPAA, PCI-DSS, and GDPR.

Integrity (A) refers to preventing unauthorized modification of data, which encryption alone does not guarantee. Authentication (B) confirms user identity, such as passwords or biometrics, but is unrelated to data- at-rest protection. Zero Trust (C) is an architectural model requiring constant verification; it is not a control for hard drive encryption.

Since the sole purpose of encrypting storage is to ensure data confidentiality, the correct answer is D.

NEW QUESTION # 90

A security manager created new documentation to use in response to various types of security incidents. Which of the following is the next step the manager should take?

- A. Conduct a tabletop exercise with the team
- B. Set the maximum data retention policy.
- C. Review the documents' data classification policy.
- D. Securely store the documents on an air-gapped network.

Answer: A

Explanation:

A tabletop exercise is a simulated scenario that tests the effectiveness of a security incident response plan. It involves gathering the relevant stakeholders and walking through the steps of the plan, identifying any gaps or issues that need to be addressed. A tabletop exercise is a good way to validate the documentation created by the security manager and ensure that the team is prepared for various types of security incidents.

NEW QUESTION # 91

A security analyst is collecting evidence in response to an incident. Which of the following must the analyst maintain in order to ensure the admissibility of the evidence in a court case?

- A. E-discovery
- B. Legal hold
- C. Chain of custody
- D. Tabletop exercise

Answer: C

Explanation:

Chain of custody is the documented process of handling and tracking evidence from collection to presentation in court, ensuring its integrity and admissibility.

NEW QUESTION # 92

A company has yearly engagements with a service provider. The general terms and conditions are the same for all engagements. The company wants to simplify the process and revisit the general terms every three years. Which of the following documents would provide the best way to set the general terms?

- A. SLA
- B. MSA
- C. MOU
- D. NDA

Answer: B

Explanation:

A Master Service Agreement (MSA) establishes the general terms and conditions for ongoing business engagements. This allows companies to reuse the same terms across multiple contracts, revisiting them periodically for updates.

NDA (B) protects confidential information but does not define service terms.

MOU (C) is a non-binding agreement, often used for partnerships, not formal service contracts.

SLA (D) focuses on service performance expectations, not overall contract terms.

CompTIA Security+ SY0-701 Official Study Guide, Security Program Management and Oversight domain.

NEW QUESTION # 93

A company experiences a breach. The investigation reveals that the threat actor used a zero-day vulnerability to gain access and move laterally. Which of the following would best improve the company's security posture and minimize the time to detect this type of incident?

- A. IDS
- B. UBA
- C. DLP
- D. NAC

Answer: B

Explanation:

UBA builds baselines of normal user and entity activity (logins, data access patterns, movement between hosts) and flags deviations - the kind of anomalous lateral movement a zero-day-driven intruder generates. Because it's behavior-based rather than signature-based, it can surface unseen exploits faster and shrink detection time for novel attacks.

NEW QUESTION # 94

.....

With a vast knowledge in the field, TestKingIT is always striving hard to provide actual, authentic CompTIA Exam Questions so that the candidates can pass their CompTIA Security+ Certification Exam (SY0-701) exam in less time. TestKingIT tries hard to provide the best CompTIA Security+ Certification Exam (SY0-701) dumps to reduce your chances of failure in the CompTIA Security+ Certification Exam (SY0-701) exam. TestKingIT provides an exam scenario with its CompTIA SY0-701 practice test (desktop and web-based) so the preparation of the CompTIA Security+ Certification Exam (SY0-701) exam questions becomes quite easier.
