No matter the worker generation or students, they are busy in dealing with other affairs, so spending much time on a Development-Lifecycle-and-Deployment-Architect exam may make a disturb between their work and life. However if you buy our Development-Lifecycle-and-Deployment-Architect exam engine, you just only need to spend 20-30 hours to practice training material and then you can feel secure to participate in this exam. We can make sure the short time on Development-Lifecycle-and-Deployment-Architect training engine is enough for you to achieve the most outstanding result.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q86-Q91):

NEW QUESTION # 86

Universal Containers (UC) is implementing Salesforce and wants the custom code to be unit-tested for all adverse conditions. Which two best practices should an Architect recommend while implementing Test Classes? Choose 2 answers

- A. Test classes must use existing data in the environment.
- B. Test classes should not create custom setting data.
- **C. Test data must have positive as well as negative data.**
- **D. Execute test classes under various profiles**

Answer: C,D

Explanation:

Test classes should execute under various profiles to ensure that the code works for different user permissions and sharing settings. Test data must have positive as well as negative data to cover all possible scenarios and edge cases.

NEW QUESTION # 87

Universal Containers has five development teams. The performance of the teams has been good, but the number of bugs has been increasing. After each sprint, they need more time to understand the code and make changes. What are two ways to improve the performance?

Choose 2 answers

- **A. Sprint review process.**
- **B. Define and follow code standards.**
- C. Define a team that will analyze/approve all changes.
- D. Version control system to identify who is generating the bugs.

Answer: A,B

Explanation:

To improve the performance of the development teams, the following ways can be suggested: Define and follow code standards, and implement a sprint review process. Code standards can help ensure consistency, readability, and maintainability of the code, as well as reduce errors and bugs. A sprint review process can help evaluate the work done in each sprint, demonstrate the functionality, and gather feedback from the stakeholders and users.

NEW QUESTION # 88

Universal Containers has multiple projects being developed in parallel. One of the projects is in the testing phase and the testing team found a list of issues on the items that will be deployed to production. As the project deadline is short, the customer team proposes that the fixes be done in the test sandbox and then deployed to production. What should be the Architect recommend?

- A. Recommend fixing the issues in the development sandbox, migrating them to testing, and deploy to production after testing.
- B. Recommend fixing the issues in the test environment and migrating the changes to the development sandbox.
- C. Recommend the customer team's proposal to fix the issues in the testing environment and deploy them to production.
- D. Recommend fixing the issues in the development environment and deploying the changes to production.

Answer: A

Explanation:

Explanation

The best practice is to fix the issues in the development sandbox, migrate them to the testing sandbox, and deploy to production after testing. This ensures that the development and testing environments are in sync and that the changes are properly tested before going to production. Fixing the issues in the testing environment and deploying them to production may introduce errors or conflicts, as the development environment may not have the same changes. Fixing the issues in the test environment and migrating them to the development sandbox may also cause errors or conflicts, as the development environment may have other changes that are not ready for testing.

NEW QUESTION # 89

Universal Containers (UC) deploys major releases on a monthly schedule. In recent months, the team has noticed the deployment time has increased two-fold from 2 hours to 4 hours. The team wants to get back to reasonable deployment times. Which three issues could be affecting their deployment times? Choose 3 ans

- A. The team is highly constrained with pre-deployment and post-deployment changes.
- B. The deployments are being scheduled during off-peak hours, which is not the best time.
- C. The number and complexity of Apex tests will have a large impact on the deployment time.
- D. Users are working in the org during deployment locking can affect users and the deployment.
- E. Some components' profiles, custom junction objects, and fields take longer to process than others.

Answer: C,D,E

Explanation:

The following issues could be affecting their deployment times:

* The number and complexity of Apex tests will have a large impact on the deployment time, as the tests will take longer to run and consume more resources.

* Some components such as profiles, custom junction objects, and fields take longer to process than others, as they have more dependencies and validations to check.

* Users are working in the org during deployment can affect users and the deployment, as they can lock records or metadata components that are being deployed, causing errors or delays.

NEW QUESTION # 90

What advice should a technical architect provide in a Change Advisory Board meeting?

- A. Solution is usable by the business.
- B. Solution is technically sound.
- C. Troubleshooting strategies for deployment issues
- D. Functionality meets the business needs.

Answer: C

Explanation:

The advice that a technical architect should provide in a Change Advisory Board meeting is troubleshooting strategies for deployment issues. This is because the Change Advisory Board is responsible for reviewing and approving changes to the IT environment, and the technical architect should provide guidance on how to resolve any potential problems that may arise during the deployment process. The other options are not relevant for the Change Advisory Board meeting, as they are more related to the

requirements analysis, design, or testing phases of the development lifecycle.

NEW QUESTION # 91

.....

If you want to pass exam and get the related certification in the shortest time, the Development-Lifecycle-and-Deployment-Architect study practice dump from our company will be your best choice. Although there are a lot of same study materials in the market, we still can confidently tell you that our Development-Lifecycle-and-Deployment-Architect exam questions are most excellent in all aspects. With our experts and professors' hard work and persistent efforts, the Development-Lifecycle-and-Deployment-Architect Prep Guide from our company have won the customers' strong support in the past years. A growing number of people start to choose our Development-Lifecycle-and-Deployment-Architect study materials as their first study tool. It is obvious that the sales volume of our study materials is increasing every year.
