HOT NCP-MCA Exam Pass Guide 100% Pass | Valid Valid Dumps Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Questions Pass for sure

Today, getting NCP-MCA certification has become a trend, and NCP-MCA exam dump is the best weapon to help you pass certification. We all know that obtaining the NCP-MCA certification is very difficult, and students who want to pass the exam often have to spend a lot of time and energy. After years of hard work, the experts finally developed a set of perfect learning materials NCP-MCA practice materials that would allow the students to pass the exam easily. With our study materials, you only need 20-30 hours of study to successfully pass the exam and reach the peak of your career. What are you waiting for? Come and buy it now.

Nutanix NCP-MCA Certification Exam covers a broad range of topics related to multicloud automation, including Nutanix Calm, Nutanix Flow, Nutanix Era, and Nutanix Xi Leap. NCP-MCA exam also tests the candidate's knowledge of cloud computing concepts, such as virtualization, networking, storage, and security. Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) certification is designed to provide IT professionals with the skills and knowledge required to be successful in the industry.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q25-Q30):

NEW QUESTION # 25

An administrator has been asked to review and clean up all existing categories within the Nutanix environment.

What information should the administrator filter on to organize the findings and eliminate unused categories?

- A. Blueprint, Policies, Value, and Entities
- **B. Name, Value, Entities, and Policies**
- C. Policies, Triggers, Categories, and Entities
- D. Blueprint, Triggers, Categories, and Polices

Answer: B

Explanation:

According to the Nutanix Prism Central Guide¹, categories are key-value pairs that can be assigned to entities such as VMs, images, blueprints, etc. Categories can be used to filter, group, and manage entities based on their attributes. To review and clean up all existing categories within the Nutanix environment, the administrator should filter on the name, value, entities, and policies of the categories. The name and value of the categories identify the category type and the category value respectively. The entities show how many and which entities are assigned to the category. The policies show how many and which policies are associated with the category.

By filtering on these information, the administrator can organize the findings and eliminate unused categories. References:

* 1 Nutanix Prism Central Guide: Categories²

NEW QUESTION # 26

After deploying a blueprint in Self-Service, an administrator notices that the invoked Playbook did not execute as expected. The blueprint deploys the VMs correctly, but no categories are applied and no notifications are sent.

What is the most likely cause of this issue?

- A. The VMs were deployed in Prism Element instead of in Prism Central.
- B. The blueprint was not assigned to a Self-Service Project.
- C. The Playbook was not published to the Marketplace.
- **D. The Playbook was not properly called by the blueprint's Create task.**

Answer: D

Explanation:

When a Blueprint is designed to trigger external automation (like a Playbook via Webhook or API) or perform post-deployment actions (like applying categories via script), these actions must be explicitly defined as Tasks within the Blueprint's lifecycle.

* The Symptom: The VM provisioning (Substrate) succeeded, but the subsequent logic (Categories / Notifications) failed to happen.

* The Cause: In Self-Service, simply creating a Blueprint does not automatically link it to an Intelligent Operations Playbook. The developer must add a specific task (e.g., an HTTP Request task targeting the Playbook trigger, or a specific "Execute Playbook" action) to the Service Profile (specifically the Post-Create or Create phase).

* If this task is missing, disabled, or misconfigured (e.g., wrong URL or payload), the VM will deploy, but the call to the Playbook will never occur, resulting in missing categories and notifications.

* Option A is incorrect because deployment would not start at all without a Project. Option D is incorrect because Playbooks are not published to the Marketplace (Blueprints are).

NEW QUESTION # 27

An administrator needs to reference several hosts in an Affinity Policy as part of a multi-VM blueprint.

What is the best way to accomplish this task?

- A. Associate a Prism Central Category to a policy within a Project.
- **B. Assign a Prism Central Category within the blueprint.**
- C. Assign to a Prism Central Tag within the blueprint.
- D. Associate a Prism Central Tag to a policy within a Project.

Answer: B

Explanation:

To utilize a VM-Host Affinity Policy (which pins VMs to specific Hosts) in the context of a Self-Service Blueprint, the administrator must leverage Categories.

* The Mechanism:

* Infrastructure Level: The administrator creates a Category (e.g., License:Oracle) and assigns it to the specific Hosts in Prism Central. They then create an Affinity Policy that enforces "VMs with Category App:Oracle must run on Hosts with Category License:Oracle."

* Blueprint Level (The Answer): In the Blueprint editor, the administrator cannot "select hosts" directly. Instead, they assign the specific Prism Central Category (e.g., App:Oracle) to the Service (VM) definition.

* Execution: When the blueprint is deployed, the VM is provisioned with that Category tag. The AHV scheduler immediately recognizes the tag and enforces the pre-existing Affinity Policy, ensuring the VM lands on the correct hosts.

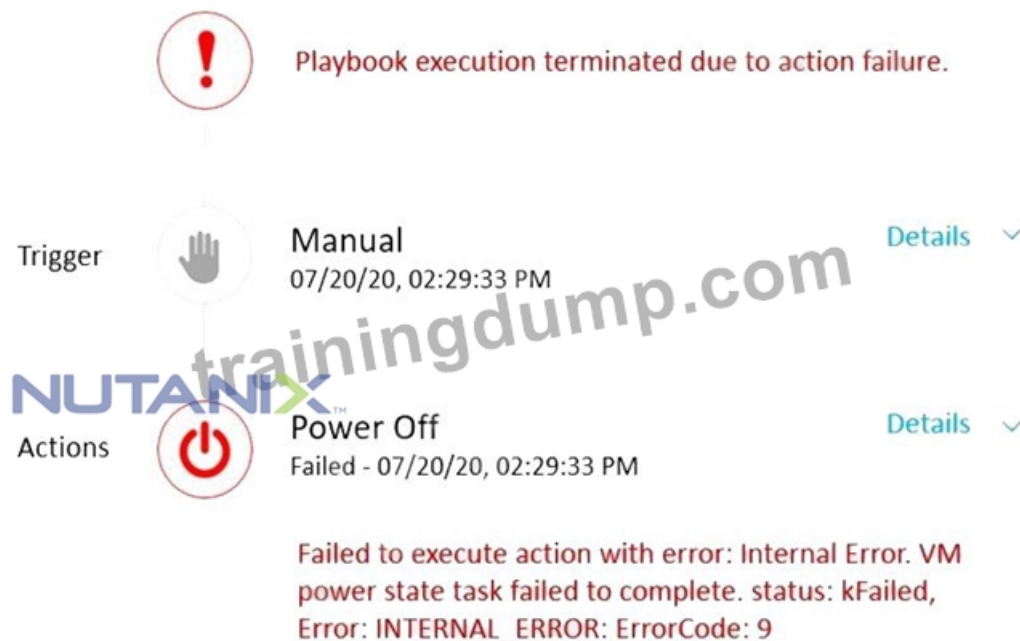

* Option A describes a non-existent workflow (Policies are typically global or environment-mapped, not

"associated to a policy within a project" in this context). Options C and D refer to "Tags," but Nutanix uses the term "Categories" for policy enforcement.

NEW QUESTION # 28

Refer to the exhibit.

Data Flow

A subset of Linux VMs are required to be gracefully shutdown each evening. A Playbook is created to shutdown the targeted VMs, however the error message shown in the exhibit is displayed when the Playbook is executed.

What is causing the error message?

- A. User executing the Playbook does not have Admin privileges.
- **B. The SSH Service is not running on the VMs.**
- C. The VM is missing Nutanix Guest Tools.
- D. The VM is already powered off.

Answer: B

Explanation:

According to the Nutanix Multicloud Automation Administration (NMCAA) course 1, one of the prerequisites for using X-Play to automate tasks on VMs is to have SSH enabled and configured on the target VMs. This allows X-Play to connect to the VMs and execute commands or scripts remotely. If the SSH service is not running on the VMs, then X-Play will fail to connect and perform the actions, resulting in the error message shown in the exhibit. The other options are not likely to cause this error, as they are either unrelated to X-Play (A and B) or not required for X-Play to work. Reference: Nutanix Multicloud Automation Administration (NMCAA) course

NEW QUESTION # 29

An administrator needs to enable Showback in Calm to allow departments to see costs associated with their Projects.

Where in Calm would the administrator enable Showback?

- A. Setting
- B. Projects
- C. LCM
- D. Marketplace

Answer: A

NEW QUESTION # 30

.....

After so many years' development, our Nutanix Certified Professional exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our NCP-MCA guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine. TrainingDump have most professional team to compiled and revise NCP-MCA Exam Question. In order to try our best to help you pass the exam and get a better condition of your life and your work, our team worked day and night to complete it. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of our practice materials that you can pass the exam easily, this is simply unimaginable.
