### NEW QUESTION # 56

Which one of the following is NOT a purpose of application scoping?

- A. Provide a way of tracking the user who developed an application
- **B. Provide a relationship between application artifacts**
- C. Provide controls for how scripts from another scope can alter tables in a scoped application
- D. Provide a namespace (prefix and scope name) to prevent cross application name collisions

**Answer: B**

Explanation:

The purpose of application scoping is NOT to provide a way of tracking the user who developed an application. Application scoping does not store or display information about the user who created or modified an application or its artifacts. The purpose of application scoping is to provide a relationship between application artifacts, provide a namespace to prevent cross-application name collisions, and provide controls for how scripts from another scope can alter tables in a scoped application.
