Microsoft AI Business Professional Sample Questions (Q87-Q92):

NEW QUESTION # 87

Select the answer that correctly completes the sentence.

Answer:

Explanation:

NEW QUESTION # 88

You are using Microsoft 365 Copilot to plan a trip and have asked Copilot to remember several details about the trip. You cancel the trip plans. You need to ensure that Copilot forgets the details. What should you do?

- A. From Copilot delete custom instructions.
- B. From Copilot delete all the conversation about the trip.
- C. From Copilot delete memories.
- D. From the My Account portal, delete the Copilot activity history.

Answer: C

Explanation:

Microsoft 365 Copilot includes a memory capability that allows it to retain user-provided preferences or details across interactions when explicitly instructed to remember them. These stored details are referred to as memories and are separate from standard conversation history.

If you previously asked Copilot to remember specific trip-related details, those details are stored as structured memory items. Simply deleting the conversation does not necessarily remove stored memory entries. Likewise, deleting activity history through the My Account portal removes conversation records but does not directly manage structured Copilot memories. Custom instructions define persistent behavioral preferences and are unrelated to trip-specific stored data.

To ensure Copilot no longer retains those trip details, you must delete the stored memories directly within Copilot. Microsoft documentation explains that users can view and manage saved memories and remove them individually to control what Copilot retains.

Therefore, the correct action to ensure Copilot forgets the trip details is to delete the memories.

NEW QUESTION # 89

Hotspot Question

From Microsoft 365 Copilot, you add custom instructions.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Yes

Yes - The instructions will apply to new chat conversations.

In Microsoft 365 Copilot, adding custom instructions allows you to define persistent rules for how the AI responds to your prompts.

Once saved, these instructions automatically apply to all new chat conversations and any subsequent interactions within those chats.

Box 2: No

No - The instructions will apply to new conversations with Researcher agent and the Analyst.

In Microsoft 365 Copilot, custom instructions (personalization settings) apply to the standard Copilot Chat experience. However, their application to the Researcher and Analyst agents is more restricted:

No Direct Customization: You cannot currently modify the predefined logic, content, or "internal" instructions of the first-party Researcher agent through standard custom instruction settings.

Contextual Influence: While these global custom instructions (like tone or formatting preferences) are designed to apply across your "Copilot experience", the Researcher and Analyst agents are specialized tools with their own built-in reasoning and reporting structures that may override or ignore certain global formatting preferences in favor of their specific task-oriented output (e.g., source-cited reports).

Application Scope: Custom instructions primarily affect new conversations once they are saved and toggled "On". They do not apply retroactively to existing chat history.

Box 3: No

No - The instructions will apply to previous responses in existing conversation.

These instructions automatically apply to all new chat conversations and any subsequent interactions within those chats.

NEW QUESTION # 90

You have a Microsoft 365 Copilot license.

You plan to run several prompts.

What should you use to ensure that Copilot generates the best response for each prompt? More than one answer choice may achieve the goal. To answer, select the Best options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Use the Analyst agent for Prompt 1 because it is optimized for structured data work: consolidating worksheets, performing calculations, sentiment breakdowns by category (product line), and producing visualizations. These tasks align with analysis-style

workflows where quantitative processing and charting are required.

Use the Researcher agent for Prompt 2 because it is designed to synthesize information from multiple sources, including SharePoint content plus web grounding, and to produce a well-structured brief with citations. Researcher is best when you need evidence-backed insights, reputable sourcing, and an organized narrative with risks and gaps.

Use Chat for Prompt 3 because the goal is drafting a refined executive email based on an attached document with tone control and communication standards. Chat excels at business writing, rewriting, tone adjustment, and producing polished communications without needing the deeper research workflow or heavy data analytics specialization.

NEW QUESTION # 91
