Successful companies are those which identify customers' requirements and provide the solution to Integration-Architect exam candidate needs and to make those dreams come true, we are in continuous touch with the exam candidates to get more useful ways. We have favorable quality reputation in the mind of exam candidates these years by trying to provide high quality Integration-Architect Study Guide with the lowest prices while the highest quality. So you can't miss our Integration-Architect learning prep.

Salesforce Integration-Architect Certification Exam is a highly sought-after certification in the Salesforce ecosystem. It validates the professional's ability to design and implement seamless, efficient, and effective integrations between Salesforce and other systems. Integration-Architect exam covers a range of topics, including integration architecture, data integration, API integration, security and governance, and performance optimization. Passing this certification exam demonstrates an individual's expertise in designing and implementing robust integration solutions that meet business requirements and maximize the value of Salesforce investments.

Salesforce Certified Integration Architect Sample Questions (Q100-Q105):

NEW QUESTION # 100

A Salesforce customer is planning to roll out Salesforce for all their Sales and Service staff.

Senior Management has requested that monitoring is to be in pla for Operations to notify any degradation in Salesforce performance. How should an integration consultant implement monitoring?

- A. Use Salesforce limits API to capture current API usage and configure alerts for monitoring.
- B. Request Salesforce to monitor the Salesforce instance and notify when there is degradation in performance.
- **C. Identify critical business processes and establish automation to monitor performance against established benchmarks.**
- D. Use APIEVENT to track all user initiated API calls through SOAP, REST or BULK APIs.

Answer: C

NEW QUESTION # 101

An Architect is asked to build a solution that allows a service to access Salesforce through the API. What is the first thing the Architect should do?

- A. Create a new user with SystemAdministrator profile.
- B. Authenticate the integration using existing Network-BasedSecurity.
- **C. Create a special user solely for the integration purposes.**
- D. Authenticate the integration using existing Single Sign-On.

Answer: C

Explanation:

Explanation

Create a special user solely for the integration purposes. This is the first thing that the Architect should do when building a solution that allows a service to access Salesforce through the API. Creating a special user for the integration purposes can help to ensure security, accountability, and traceability of the API calls. The special user should have a unique username, password, security token, and profile that grants only the necessary permissions and access for the integration. The special user should also be assigned to an API-only user license type that prevents logging in to the Salesforce UI. References: Certification - Integration Architect - Trailhead, [User Licenses], [API User Permission]

NEW QUESTION # 102

Given the diagram below, a Salesforce org, middleware, and Historical data store (with 20million records and growing) exists with connectivity between them

Historical records are archived from Salesforce and moved to Historical Data store (which houses 20M records and growing; fine-tuned to be performant with search queries).

Call center agents use Salesforce, when reviewing occasional special cases, have requested access to view the related historical case items that relate to submit cases.

Which mechanism and patterns are recommended to maximize declarative configuration?

- A. Use an ESB tool with Request-Reply pattern and then make a real-time Apex callout to the ESB endpoint to fetch and display component related to Case object
- **B. Use ESB tool with Data Virtualization pattern, expose OData endpoint, and then use Salesforce Connect to consume and display the External Object alongside with the Case object.**
- C. C Use an ESB tool with a fire and forget pattern and then publish a platform event for the requested historical data.
- D. Use an ETL tool with a Batch Data Synchronization pattern to migrate historical data into Salesforce and into a custom object (historical data) related to Case object.

Answer: B

Explanation:

Explanation

The Data Virtualization pattern allows Salesforce to access external data sources without storing the data in Salesforce. This reduces the data storage and synchronization costs and enables real-time access to the historical data. Salesforce Connect can be used to consume OData endpoints exposed by the ESB tool and display the external objects as related lists or custom components on the Case object

NEW QUESTION # 103

Northern Trail Outfitters has recently experienced intermittent network outages in its call center. When network service resumes, Sales representatives have inadvertently created duplicate orders in the manufacturing system because the order was placed but the return acknowledgement was lost during the outage.

Which solution should an architect recommend to avoid duplicate order booking?

- A. Have scheduled Apex resubmit orders that do not have a successful response.
- B. Implement idempotent design and have Sales Representatives retry order(s) in question.
- C. Use scheduled apex to query manufacturing system for potential duplicate or missing orders.
- **D. Use Outbound Messaging to ensure manufacturing acknowledges receipt of order.**

Answer: D

NEW QUESTION # 104

Northern Trail Outfitters is planning to perform nightly batch loads into Salesforce from an external system with a custom Java application using the and the CIO is curious about monitoring recommendations for the jobs from the Technical Architect Which two recommendations will help meet the requirements?

Choose 2 answers

- A. Set the Salesforce debug logs level to "finest" and add the user Id running the job to monitor in the "Debug Logs" in the setup menu.
- **B. Use the getBatchInfo method in the Java application to monitor the status of the jobs from the Java application.**
- **C. Visually monitor in the Salesforce UI using the "Bulk Data Load Jobs in Salesforce in the setup menu.**
- D. Write the error response from the Bulk API status to a custom error logging object in Salesforce using an Apex trigger and create reports on the object.

Answer: B,C
