Test C-ABAPD-2507 Pattern | Latest C-ABAPD-2507 Exam Answers

As we all know, sometimes the right choice can avoid the waste of time, getting twice the result with half the effort. Especially for C-ABAPD-2507 preparation materials, only by finding the right ones can you reduce the pressure and help yourself to succeed. If you haven't found the right materials yet, please don't worry. Maybe our C-ABAPD-2507 Practice Engine can give you a leg up which is our company's flagship product designed for the C-ABAPD-2507 exam.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q47-Q52):

NEW QUESTION # 47

Given the following Core Data Services View Entity Data

1. Definition, DEFINE VIEW ENNTITY demo_cds_view_entity
2. AS SELECT FROM spfli
3. {
4. cityfrom,
5. cityto,
6. carrid,
7. conmid
8. }

when you attempt to activate the definition, what will be the response?

- A. Activation error due to missing annotation "@AccessControl.authorizationCheck"
- B. Activation error due to missing annotation "@AbapCatalog.sqlViewName"
- C. Activation will be successful
- **D. Activation error due to no key defined**

Answer: D

NEW QUESTION # 48

Which of the following integration frameworks have been released for ABAP cloud development? Note: There are 3 correct answers to this question.

- **A. SOAP consumption**
- **B. Business events**
- **C. OData services**
- D. CDS Views
- E. Business Add-ins (BAdIs)

Answer: A,B,C

NEW QUESTION # 49

Which of the following ON conditions must you insert in place of "???"?

- **A. ON Sprojection.carrier_id=Z_Source2.carrier_id**
- B. ON Sprojection. Carrier Source2.carrier
- C. ON Z_Source1.camer_id = 7_Source2 carrier_id
- D. ON Sprojection Camer=Source2 carrier_id

Answer: A

Explanation:

The correct ON condition that must be inserted in place of "???" is:

ON Sprojection.carrier_id=Z_Source2.carrier_id

This ON condition specifies the join condition between the CDS view Sprojection and the database table Z_Source2. The join condition is based on the field carrier_id, which is the primary key of both the CDS view and the database table. The ON condition ensures that only the records that have the same value for the carrier_id field are joined together.

The other options are not valid ON conditions, because:

A . ON Z_Source1.camer_id = 7_Source2 carrier_id is not valid because Z_Source1 and 7_Source2 are not valid data sources in the given code. There is no CDS view or database table named Z_Source1 or 7_Source2. The correct names are Z_Source1 and Z_Source2. Moreover, the field camer_id is not a valid field in the given code. There is no field named camer_id in any of the data sources. The correct name is carrier_id.

B . ON Sprojection Camer=Source2 carrier_id is not valid because Sprojection and Source2 are not valid data sources in the given code. There is no CDS view or database table named Sprojection or Source2. The correct names are Sprojection and Z_Source2. Moreover, the field Camer is not a valid field in the given code. There is no field named Camer in any of the data sources. The correct name is carrier_id. Furthermore, the ON condition is missing the dot (.) operator between the data source name and the field name, which is required to access the fields of the data source.

C . ON Sprojection. Carrier Source2.carrier is not valid because Carrier and carrier are not valid fields in the given code. There is no field named Carrier or carrier in any of the data sources. The correct name is carrier_id. Moreover, the ON condition is missing the dot (.) operator between the data source name and the field name, which is required to access the fields of the data source.

NEW QUESTION # 50

You want to join two database tables, T_CARRIER, and T_CONNECTIONS, to retrieve all carriers, whether they have corresponding connections or not.

Which statements would achieve this? Note: There are 2 correct answers to this question.

- A. SELECT FROM carrier INNERR JOIN t_connections ON...
- **B. SELECT FROM carrier LEFT OUTER JOIN t_connections ON...**

- C. SELECT FROM carrier LEFT INNER JOIN t_connections ON..
- D. SELECT FROM connections RIGHT OUTER JOIN t_carrier ON...

Answer: B,D

NEW QUESTION # 51

What would be the correct expression to change a given string value 'mr joe doe' into 'JOE' in an ABAP SQL field list?

- A. SELECT FROM TABLE dbtabl FIELDS
Of1,
left(lower(substring('mr joe doe', 4, 3)), 3) AS f2_left_lo_sub, f3,
- B. SELECT FROM TABLE dbtabl FIELDS
Of1,
upper(left('mr joe doe', 6)) AS f2_up_left, f3,
- C. SELECT FROM TABLE dbtabl FIELDS
Of1,
substring(lower(upper('mr joe doe')), 4, 3) AS f2_sub_lo_up, f3,
- D. SELECT FROM TABLE dbtabl FIELDS
Of1,
substring(upper('mr joe doe'), 4, 3) AS f2_sub_up, f3,...

Answer: D

Explanation:

The correct expression to change a given string value 'mr joe doe' into 'JOE' in an ABAP SQL field list is C. SELECT FROM TABLE dbtabl FIELDS Of1, substring(upper('mr joe doe'), 4, 3) AS f2_sub_up, f3,... This expression uses the following SQL functions for strings12:

upper: This function converts all lowercase characters in a string to uppercase. For example, upper('mr joe doe') returns 'MR JOE DOE'.

substring: This function returns a substring of a given string starting from a specified position and with a specified length. For example, substring('MR JOE DOE', 4, 3) returns 'JOE'.

AS: This keyword assigns an alias or a temporary name to a field or an expression in the field list. For example, AS f2_sub_up assigns the name f2_sub_up to the expression substring(upper('mr joe doe'), 4, 3).

You cannot do any of the following:

A. SELECT FROM TABLE dbtabl FIELDS Of1, upper(left('mr joe doe', 6)) AS f2_up_left, f3,...: This expression uses the wrong SQL function for strings to get the desired result. The left function returns the leftmost characters of a string with a specified length, ignoring the trailing blanks. For example, left('mr joe doe', 6) returns 'mr joe'. Applying the upper function to this result returns 'MR JOE', which is not the same as 'JOE'.

B. SELECT FROM TABLE dbtabl FIELDS Of1, left(lower(substring('mr joe doe', 4, 3)), 3) AS f2_left_lo_sub, f3,...: This expression uses unnecessary and incorrect SQL functions for strings to get the desired result. The lower function converts all uppercase characters in a string to lowercase. For example, lower(substring('mr joe doe', 4, 3)) returns 'joe'. Applying the left function to this result with the same length returns 'joe' again, which is not the same as 'JOE'.

D. SELECT FROM TABLE dbtabl FIELDS Of1, substring(lower(upper('mr joe doe')), 4, 3) AS f2_sub_lo_up, f3,...: This expression uses unnecessary and incorrect SQL functions for strings to get the desired result. The lower function converts all uppercase characters in a string to lowercase, and the upper function converts all lowercase characters in a string to uppercase. Applying both functions to the same string cancels out the effect of each other and returns the original string. For example, lower(upper('mr joe doe')) returns 'mr joe doe'. Applying the substring function to this result returns 'joe', which is not the same as 'JOE'.

NEW QUESTION # 52

.....

Evaluate your own mistakes each time you attempt the desktop SAP Certified Associate - Back-End Developer - ABAP Cloud (C-ABAPD-2507) practice exam. It expertly is designed C-ABAPD-2507 practice test software supervised by a team of professionals. There is 24/7 customer service to help you in any situation. You can customize your desired C-ABAPD-2507 Exam conditions like exam length and the number of questions.
