Test 156-551 Questions & 156-551 Valid Test Materials

As a member of the people working in the 156-551 industry, do you have a headache for passing some CheckPoint certification exams? Generally, 156-551 certification exams are used to test the examinee's related 156-551 professional knowledge and experience and it is not easy pass these exams. For the examinees who are the first time to participate 156-551 certification exam, choosing a good pertinent training program is very necessary. TestValid can offer a specific training program for many examinees participating in CheckPoint certification exams. Our training program includes simulation test before the formal examination, specific training course and the current exam which has 95% similarity with the real exam. Please add TestValid to you shopping car quickly.

CheckPoint Check Point Certified VSX Specialist - R81 (CCVS) Sample Questions (Q78-Q83):

NEW QUESTION # 78

Which commands help trace packet flow through inspection chains for a specific Virtual System?

(Choose two)

- A. fw monitor
- B. fw ctl conn -s
- C. netstat -p
- D. vsenv followed by fw ctl zdebug + drop

Answer: A,D

Explanation:

fw monitor and fw ctl zdebug (run after entering the appropriate VS context) are used to trace packet movement and detect drops or misrouting. These tools are critical in resolving traffic flow and inspection chain issues.

NEW QUESTION # 79

What is the primary purpose of the Gaia kernel VRF (Virtual Routing and Forwarding) in VSX?

- A. Isolate routing tables per Virtual System
- B. Load balancing across VSs
- C. Create VLANs inside a VS
- D. Route multicast traffic

Answer: A

Explanation:

VRF (Virtual Routing and Forwarding) enables isolated routing domains for each Virtual System in VSX. This ensures that each VS maintains its own routing table, which is crucial for supporting multitenancy and preventing routing conflicts.

NEW QUESTION # 80

What must be defined when removing a Virtual System using the VSX Provisioning Tool?

- A. Object UUID
- B. VSX Gateway hostname
- C. Associated policy
- D. VSID

Answer: D

Explanation:

To remove a Virtual System using the VSX Provisioning Tool, you must specify its unique VSID.

This ID identifies the Virtual System on the gateway and ensures the correct object is deleted without affecting others.

NEW QUESTION # 81

What is required before using a physical interface in VSX for VLAN sub interfaces?

- A. Delete existing VS mappings
- B. Enable trunk mode
- C. Assign IP from each VLAN
- D. Enable bonding

Answer: B

Explanation:

Before assigning VLAN-tagged sub interfaces to Virtual Systems, the physical interface on the VSX Gateway must be configured in trunk mode. This allows the passage of multiple VLANs over the same physical link.

NEW QUESTION # 82

Which of the following should be identical across all VSX cluster members? (Choose two)

- A. Interface topology
- B. Management IP addresses
- C. VSX Gateway object names
- D. Policy packages assigned to VSs

Answer: A,D

Explanation:

VSX cluster members must have identical interface topologies and apply the same policy package per VS to ensure consistent behavior and failover success. Variance in these parameters may cause policy mismatch or connectivity issues.
