Plat-Admn-202최신 업데이트 공부자료, Plat-Admn-202합격보장 가능 덤프공부

우리PassTIP 에서는 여러분들한테 아주 편리하고 시간 절약함과 바꿀 수 있는 좋은 대책을 마련하였습니다. PassTIP에서는 Salesforce Plat-Admn-202인증 시험관련가이드로 효과적으로 Salesforce Plat-Admn-202시험을 패스하도록 도와드리겠습니다. 만약 여러분이 다른 사이트에서도 관련덤프자료를 보셨을 경우 페이지 아래를 보시면 자료 출처는 당연히 PassTIP 일 것입니다. PassTIP의 자료만의 제일 전면적이고 또 최신 업데이트일것입니다.

Salesforce Plat-Admn-202 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
주제 2	<ul style="list-style-type: none">• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
주제 3	<ul style="list-style-type: none">• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
주제 4	<ul style="list-style-type: none">• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
주제 5	<ul style="list-style-type: none">• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.

최신 Salesforce Developer Plat-Admn-202 무료샘플문제 (Q59-Q64):

질문 # 59

The VP of Sales at Universal Containers has asked the app builder to let sales reps create opportunity records directly from the account, with a number of fields pre-populated.

Which feature should the app builder use to allow users to create the opportunity?

- A. A quick action
- B. A custom link
- C. A default action
- D. A custom button

정답: A

설명:

The feature that the app builder should use to allow users to create the opportunity is a quick action. A quick action is a type of

custom button or link that can create or update records, log calls, send emails, or launch flows from a record page or a global menu. The app builder can create a quick action on the account object that creates an opportunity record with pre-populated fields. Option B is incorrect because a default action is not a valid term, but rather a standard action that appears on every record page by default, such as Edit or Delete. Option C is incorrect because a custom button is not suitable for this requirement, as custom buttons can only display a URL or execute JavaScript when clicked. Option D is incorrect because a custom link is not suitable for this requirement, as custom links can only display a URL or execute JavaScript when clicked.

질문 # 60

Universal Containers (UC) needs a picklist field called Status on three separate custom objects. UC has a requirement to share the list of values for this field across each object.

- A. Dependent Picklist
- B. Related Picklist
- **C. Global Picklist Value Set**
- D. Shared Custom Field

정답: C

설명:

When multiple objects require the same picklist values, the correct approach is to create a Global Picklist Value Set (also called a Global Value Set). This allows an organization to maintain one centralized list of picklist values that can be reused across multiple picklist fields on different objects.

Why C is correct:Exact Extract:"Global value sets let you share the same picklist values with more than one picklist field. A global value set is a set of shared values that you define once and use in multiple custom picklist fields." - Salesforce Help | Global Value SetsThis ensures consistent data values, simplifies maintenance, and makes changes automatically available wherever the global picklist is used.

Why C is correct:Exact Extract:"Global value sets let you share the same picklist values with more than one picklist field. A global value set is a set of shared values that you define once and use in multiple custom picklist fields." - Salesforce Help | Global Value SetsThis ensures consistent data values, simplifies maintenance, and makes changes automatically available wherever the global picklist is used.

Why not A (Related Picklist):"Related Picklist" is not a valid Salesforce feature.

Why not B (Shared Custom Field):Salesforce does not provide a "Shared Custom Field" functionality. Each field belongs to a specific object.

Why not D (Dependent Picklist):Dependent picklists control available values based on another field's value. They do not allow reuse of a single value list across multiple objects.

질문 # 61

Ursa Major Solar (UMS) uses a public sharing model for accounts. UMS would like to move to a more restrictive sharing model but wants the Sales team to continue to have access to all account records with the sales record type.

Which two actions should an app builder complete to implement this change?

Choose 2 answers

- **A. Create a criteria-based sharing rule.**
- B. Create an owner-based sharing rule.
- C. Update the Sales profile.
- **D. Update the organization-wide defaults**

정답: A,D

설명:

Update the organization-wide defaults and create a criteria based sharing rule are two actions that an app builder should complete to implement the change of moving to a more restrictive sharing model while allowing the Sales team to access all account records with the sales record type. Updating the organization-wide defaults can set the baseline level of access for accounts, and creating a criteria based sharing rule can grant additional access based on record type. Updating the Sales profile and creating an owner-based sharing rule are not necessary or sufficient actions for this change.

질문 # 62

An app builder wants to create a new field using Schema Builder. Who will get access to the new field by default?

- A. No profiles
- B. All profiles
- C. Standard profiles
- D. Internal profiles

정답: B

설명:

All profiles will get access to the new field by default when it is created using Schema Builder. The app builder can modify the field-level security settings later to restrict access for certain profiles. Standard profiles, no profiles, and internal profiles are not correct options.

질문 # 63

Ursa Major Solar (UMS) uses Cases to track customer complaints, an Issue__c object to represent known problems with its solar panels, and a Case_Issue__c junction object to relate known problems to customer complaints.

Periodically, UMS conducts audits which require the auditing users to view Case_Issue__c records.

Which access levels must be configured to allow UMS users to access Case_Issue__c records?

- A. Read-Only access of Case issue =
- B. Read-Only access on Case and issue__c
- C. Read Only access on Case and case_issue__o
- D. Read-Only access or issue__c and issue__c

정답: B

설명:

D). Read-Only access on Case and Issue__c. Users need read-only access to both Case and Issue__c objects to view associated Case_Issue__c junction object records properly. This is because access to junction object records in Salesforce is determined by the user's access levels to the parent records in a relationship. Steps to configure access:

Navigate to Setup → Profiles or Permission Sets.

Select the profile or permission set of the auditing users.

Under Object Settings, adjust the permissions for Case and Issue__c to at least 'Read-Only'.

Ensure that users have visibility to the Case_Issue__c object itself.

This configuration allows users to view the details of cases and issues as they audit the junction object records.

Explanation:

To ensure auditing users can access records in the Case_Issue__c junction object, the correct data permissions on related records must be established:
