## Don't Miss Amazing Offers Get Real Juniper JN0-105 Exam Questions Today

With the protection of content and learning methods on our JN0-105 study guide, you will not have to worry about your exam at all. Of course, if you have any suggestions for our JN0-105 training materials, you can give us feedback. Our team of experts will certainly consider your suggestions. Perhaps the next version upgrade of JN0-105 Real Exam is due to your opinion. In order to thank you for your support, we will also provide you with some benefits.

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q29-Q34):

### NEW QUESTION # 29

Which two addresses are included in an Ethernet frame header? (Choose two.)

- A. source MAC address
- B. source IP address
- C. destination IP address
- D. destination MAC address

Answer: A,D

Explanation:

An Ethernet frame header includes the source MAC address (B) and the destination MAC address (D). These addresses are used to deliver the frame from one Ethernet device to another directly connected Ethernet device on the same network segment. Ethernet frames do not include IP addresses, as those are part of the IP packet encapsulated within the Ethernet frame.

### NEW QUESTION # 30

You have just increased the MTU size of interface ge-0/0/0 and committed the configuration.

Which command would help you identify the applied MTU change?

- A. show interfaces ge-0/0/0
- B. show interfaces ge-0/0/0 terse
- C. monitor traffic interface ge-0/0/0
- D. monitor interface ge-0/0/0

**Answer: A**

Explanation:

After increasing the MTU size of an interface and committing the configuration, the command to verify the applied MTU change is D, "show interfaces ge-0/0/0." This command displays detailed information about the interface, including the current MTU size, making it the best choice for verifying the applied changes.

### NEW QUESTION # 31

Which two common routing policy actions affect the flow of policy evaluation? (Choose two.)

- A. next policy
- B. community
- C. next term
- D. next hop

**Answer: A,C**

Explanation:

In Junos OS routing policy evaluation, "next policy" (A) and "next term" (C) are common actions that affect the flow of policy evaluation. "Next policy" directs the evaluation to the next policy in the sequence, whereas "next term" moves the evaluation to the next term within the current policy, allowing for granular control over routing decisions.

### NEW QUESTION # 32

After the factory default configuration is loaded, which configuration object must be created prior to the first commit?

- A. root authentication
- B. loopback IP address
- C. host name
- D. out-of-band connectivity

**Answer: A**

Explanation:

In Juniper Networks devices, when the factory default configuration is loaded, the first step before committing any configuration is to set up root authentication. This is crucial because it secures the device by ensuring that only authorized users have administrative access. Without setting up a root password, the device will not allow any commit operations, which is a safety measure to prevent unauthorized access. This requirement emphasizes the importance Juniper places on security right from the initial setup of the device.

### NEW QUESTION # 33

Exhibit

```
user@router> show route 192.168.36.1
```

```
inet.0: 5 destinations, 6 routes (5 active, 0 holddown, 0 hidden) += Active Route, - = Last Active, * = Both
```

```
192.168.36.1/32 *[Static/5] 00:00:31
```

```
> to 10.1.1.2 via ge-0/0/10.0 [OSPF/IO] 00:02:21, metric 1 > to 10.1.1.2 via ge-0/0/10.0 Referring to the exhibit, which route(s) will be selected by Junos for packet forwarding?
```

- A. The Junos OS randomly selects one route.
- B. The static route will be selected.
- C. The Junos OS selects both routes.
- D. The OSPF route will be selected.
