Pass4Tes가 제공하는 제품을 사용함으로 여러분은 IT업계하이클래스와 멀지 않습니다. Pass4Tes가 제공하는 인증시험덤프는 여러분을 Salesforce 인증 Integration-Architect 시험을 안전하게 통과는 물론 관련전업지식장악에도 많은 도움이 되며 또한 우리는 일년무료 업뎃서비스를 제공합니다.

만약 아직도 Salesforce Integration-Architect 인증 시험 위하여 많은 시간과 정력을 소모하며 열심히 공부하고 있습니까? 아직도 어떻게하면 Salesforce Integration-Architect 인증 시험을 빠르게 취득할 수 있는 방법을 못찾고 계십니까? 지금 Fast2test에서 Salesforce Integration-Architect 인증 시험을 안전하게 넘을 수 있도록 대책을 내드리겠습니다. 아주 신기한 효과가 있을 것입니다.

>> [Integration-Architect합격보장 가능 덤프](#) <<

Salesforce Integration-Architect퍼펙트 최신버전 자료 & Integration-Architect최신버전 인기 시험자료

Salesforce Integration-Architect 덤프는 고객님의 Salesforce Integration-Architect 시험패스요망에 제일 가까운 시험대비자료입니다. 많은 자료정리 필요없이 Fast2test에서 제공해드리는 깔끔한 Salesforce Integration-Architect 덤프만 있으면 자격증을 절반 취득한것과 같습니다. Salesforce Integration-Architect 덤프를 다운받아 열공하세요.

최신 Salesforce Integration Architecture Designer Integration-Architect 무료샘플문제 (Q123-Q128):

질문 # 123

Universal Containers (UC) is a leading provider of management training globally. UC embarked on a Salesforce transformation journey to allow students to register for courses in the Salesforce community. UC has a learning system that masters all courses and student registration.

UC requested a near real-time feed of student registration from Salesforce to the learning system. The integration architect recommends using Salesforce event.

Which API should be used for the Salesforce platform event solution?

- A. O REST API
- B. SOAP API
- C. Tooling API**
- D. Streaming API

정답: C

설명:

Explanation

The API that should be used for the Salesforce platform event solution is Tooling API.

Tooling API is a specialized API that exposes metadata used in developer tooling that you can access through REST or SOAP.

You can use Tooling API to create, update, or delete platform event definitions and fields⁴ Streaming API is used to subscribe to platform events and receive notifications when they are published⁵

질문 # 124

What should an integration architect consider when recommending Platform Events as an integration solution?

- A. Event Monitoring is used to track user activity, such as logins and running reports.
- B. When an event definition is deleted, it's permanently removed and can't be restored.
- C. Subscribe to an AssetTokenEvent stream to monitor OAuth 2.0 authentication activity.

정답: B

설명:

When recommending Platform Events, an architect must account for the metadata lifecycle and the permanence of administrative actions. Unlike standard or custom objects, which can often be recovered from the Recycle Bin for a limited time, Platform Event definitions are handled with stricter permanence. Once a Platform Event definition is deleted, it is permanently removed from the organization's metadata, and it cannot be restored. This deletion also immediately invalidates any associated triggers, subscriptions, and stored events in the bus.

Beyond metadata management, the architect must consider the Event Retention window. High-volume platform events are stored for 72 hours, allowing subscribers to use a Replay ID to recover missed messages.

However, this durability is predicated on the definition existing; if the definition is deleted, the historical data in the bus becomes inaccessible. Option A refers to Real-Time Event Monitoring, which is a separate product feature used for security auditing rather than general integration. Option B describes a specific system event (AssetTokenEvent) used for IoT device authentication, which is a niche use case and not a general consideration for platform event architecture. Therefore, understanding the permanent nature of metadata deletion is a fundamental "Maintenance" and "Governance" consideration that the architect must highlight to ensure the stability of the enterprise's event-driven landscape.

질문 # 125

Northern Trail Outfitters needs to use Shield Platform Encryption to encrypt social security numbers in order to meet a business requirement.

Which two considerations should an Integration Architect do prior to the implementation of Shield Platform Encryption?

Choose 2 answers

- A. Encrypt all the data so that it is secure.
- B. Review shield platform encryption configurations.
- C. Use Shield Platform Encryption as a user authentication or authorization tool.
- D. Encrypt the data using the most current key.

정답: A,B

설명:

The considerations that an Integration Architect should do prior to the implementation of Shield Platform Encryption are:

Review shield platform encryption configurations.

Encrypt all the data so that it is secure.

Shield Platform Encryption is a feature that allows you to encrypt sensitive data at rest in Salesforce, such as social security numbers, without compromising critical platform functionality. Before implementing Shield Platform Encryption, you should review the shield platform encryption configurations, such as the encryption key management, the encryption policy, and the encrypted fields and files. You should also encrypt all the data that is subject to encryption, not just the data using the most current key. Encrypting all the data ensures that your data is secure and compliant with your business requirements. Encrypting the data using the most current key is not a valid consideration because Shield Platform Encryption uses a deterministic encryption scheme that does not allow you to rotate or re-encrypt your data with a new key. Using Shield Platform Encryption as a user authentication or authorization tool is not a valid consideration because Shield Platform Encryption is not designed for that purpose. Shield Platform Encryption only encrypts data at rest, not in transit or in use.

질문 # 126

A subscription-based media company's system landscape forces many subscribers to maintain multiple accounts and to log in more than once. An Identity and Access Management (IAM) system, which supports SAML and OpenId, was recently implemented to improve the subscriber experience through self-registration and single sign-on (SSO). The IAM system must integrate with Salesforce to give new self-service customers instant access to Salesforce Community Cloud.

Which requirement should Salesforce Community Cloud support for self-registration and SSO?

- A. OpenId Connect Authentication Provider and JIT provisioning
- B. SAML SSO and Just-in-Time (JIT) provisioning
- C. SAML SSO and Registration Handler

정답: A

질문 # 127

An integration architect has built a Salesforce application that integrates multiple systems and keeps them synchronized via Platform Events. What is taking place if events are only being published?

- A. The platform events are published after the Apex transaction completes.
- B. The platform events are published immediately before the Apex transaction completes.
- C. The platform events are being published from Apex.

정답: A

설명:

The timing of Platform Event publishing is a critical detail for an Integration Architect, as it affects data consistency and transaction integrity. In Salesforce, the default and most common behavior for publishing Platform Events from Apex is "Publish After Commit." When an architect chooses the "Publish After Commit" setting (defined at the event level), the events are held in a buffer and are only released to the event bus after the Apex transaction completes successfully. This ensures that if the database transaction fails and rolls back, the event-which might trigger external actions- is never sent. This prevents "ghost" events where an external system is told to process data that was never actually saved to the Salesforce database.

The question implies a standard scenario where events are being "published" into the bus. In this state, the events have passed the transaction boundary. If the events were only "being published from Apex" (Option C), it doesn't describe the state of the delivery or the transaction. Option B is technically incorrect for standard event publishing logic, as Salesforce explicitly separates the event bus from the database commit to maintain atomicity.

Understanding this "After Commit" behavior is vital when designing synchronization patterns. If the architect requires the event to be sent regardless of whether the transaction succeeds (e.g., for logging a failure), they would need to configure the event as "Publish Immediately." However, in a standard synchronization use case where events are "only being published," it signifies that the source transaction has finalized, and the messages are now available for subscribers (like middleware or other Salesforce orgs) to consume.

질문 # 128

.....

다년간 IT업계에 종사하신 전문가들이 자신의 노하우와 경험으로 제작한 Salesforce Integration-Architect덤프는 Integration-Architect 실제 기출문제를 기반으로 한 자료로서 Integration-Architect시험문제의 모든 범위와 유형을 포함하고 있어 높은 적중율을 자랑하고 있습니다. 덤프구매후 불합격 받으시면 구매일로부터 60일내 주문은 덤프비용을 환불해드립니다. IT자격증 취득은 Fast2test덤프가 정답입니다.

Integration-Architect퍼펙트 최신버전 자료 : <https://kr.fast2test.com/Integration-Architect-premium-file.html>

Fast2test의 Salesforce 인증 Integration-Architect시험덤프 공부 가이드 마련은 현명한 선택입니다. Fast2test는 최선을 다하여 여러분이 한번에 Integration-Architect 인증 시험을 패스하도록 도와드릴 것입니다. 우선 우리 Fast2test 사이트에서 Salesforce Integration-Architect 관련 자료의 일부 문제와 답 등 샘플을 제공함으로 여러분은 무료로 다운받아 체험해보실 수 있습니다. 체험 후 우리의 Fast2test에 신뢰감을 느끼게 됩니다. 최강 IT 전문가 팀이 가장 최근의 Integration-Architect 실제 시험 문제를 연구하여 만든 Salesforce Certified Integration Architect Integration-Architect 인기 시험 덤프는 기출문제와 예상문제의 모음 공부자료입니다. Salesforce 인증 Integration-Architect 시험은 유용한 IT 자격증을 취득할 수 있는 시험중의 한 과목입니다.

어디로도 갈데없는 분노와 무력감은 곧 우울함으로 뒤바뀌었다, 내 지금까지 대록을 돌아다니며 많은 사람을 봐

왔지만, 이 아이만큼 재능 있는 친구는 못 봤거든, Fast2test의 Salesforce 인증 Integration-Architect 시험덤프 공부 가이드 마련은 현명한 선택입니다.

적중율 높은 Integration-Architect 합격보장 가능 덤프 시험대비덤프
