NEW QUESTION # 22

Which aspects contribute to the calculation of the validity of a dataset? Choose 2 answers.

- A. Number of empty rows across the dataset sample
- **B. Number of valid and invalid values across the dataset sample**
- C. Use of user ratings and certification
- **D. Use of semantic types across the dataset sample**

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation:

The validity of a dataset in Talend's Trust Score framework is determined by:

- * Number of valid and invalid values across the dataset sample (Option B):
 - * This metric assesses the quality of the data by evaluating the proportion of valid entries compared to invalid ones. A higher number of valid values indicates better data quality.
 - * Use of semantic types across the dataset sample (Option C):
 - * Semantic types help in understanding the meaning and context of data fields. Consistent and correct application of semantic types ensures that data is interpreted accurately, contributing to its validity.
- Why not other options?
- * Option A: User ratings and certification pertain to the popularity axis, reflecting user trust and endorsement, not the intrinsic validity of the data.
 - * Option D: The number of empty rows relates to the completeness axis, indicating missing data, rather than directly affecting validity.

NEW QUESTION # 23

Which options can you use to add a Joblet to your talend Job?

Choose 3 answers

- **A. Type the Joblet name on the Studio canvas, then select it from the Palette drop-down menu.**
- **B. Drag the Joblet from the Repository tree view to designer canvas.**
- C. Right-click the Joblet from Palette and select the Add option.
- D. Use a tRunJob component and select the Joblet from the drop-down menu.
- **E. Drag the Joblet from Palette to the design workspace.**

Answer: A,B,E

Explanation:

To add a Joblet to your Talend Job, you can use one of these options:

- * Type the Joblet name on the Studio canvas, then select it from the Palette drop-down menu. This will create a Joblet container on your canvas that contains all the components and links of your Joblet.
- * Drag the Joblet from Repository tree view to designer canvas. This will also create a Joblet container on your canvas that contains all components and links of your Joblet.
- * Drag Joblet from Palette to design workspace. This will open a dialog box where you can select an existing Joblet from Repository or create a new one.

You cannot use a tRunJob component and select Joblet from drop-down menu, nor right-click Joblet from Palette and select Add option. These methods are not available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Joblets - 7.3]

Explanation:

The tRESTRRequest component supports OpenAPI Specification (OAS)/Swagger 2.0 for initializing component endpoints, API mappings, and documentation.

- * OAS/Swagger 2.0 file (Correct Answer - Option D):
- * tRESTRRequest allows API-first development by importing a Swagger 2.0 (OAS) definition.
- * This enables automatic configuration of API endpoints, request parameters, and response structures.
- * Why not other options?
- * CSV definition file (Option A): Not a valid API definition format.
- * XML definition file (Option B): XML files are not standard for REST API definitions.
- * WSDL file (Option C): WSDL is used for SOAP-based web services, not REST.
