Nowadays, there are more and more people realize the importance of DevOps-SRE, because more and more enterprise more and more attention it. If someone pass the DevOps-SRE exam and own relevant certificates that mean he had good grasp of this field of knowledge, that is to say, he will be popular and valued by more enterprise. In order to help most candidates who want to Pass DevOps-SRE Exam, so we compiled such a study materials to make exam simply. Our DevOps-SRE guide torrent has gone through strict analysis and summary according to the past exam papers and the popular trend in the industry and are revised and updated according to the change of the syllabus and the latest development conditions in the theory and the practice.

At the information age, knowledge is wealth as well as productivity. All excellent people will become outstanding one day as long as one masters skill. In order to train qualified personnel, our company has launched the DevOps-SRE Study Materials for job seekers. We are professional to help tens of thousands of the candidates get their DevOps-SRE certification with our high quality of DevOps-SRE exam questions and live a better life.

Latest Peoplecert DevOps-SRE Exam Book | New DevOps-SRE Test Notes

You may be also one of them, you may still struggling to find a high quality and high pass rate PeopleCert DevOps Site Reliability Engineer (SRE) study question to prepare for your exam. Your search will end here, because our study materials must meet your requirements. Our product is elaborately composed with major questions and answers. Our study materials are choosing the key from past materials to finish our DevOps-SRE Torrent prep. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the DevOps-SRE exam torrent. Then, you will have enough confidence to pass it. So start with our DevOps-SRE torrent prep from now on. We can succeed so long as we make efforts for one thing.

Questions (Q66-Q71):

NEW QUESTION # 66

Which of the following BEST defines a Service Level Indicator (SLI)?

- A. A subjective measure of the consequences if the level of service is not achieved
- B. A quantitative target value for aspects of the level of service that are provided
- C. A quantitative measure of some aspect of the level of service that is provided
- D. A subjective assessment of the performance aspects of the level of service required

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Google's definition is explicit: "An SLI is a carefully defined QUANTITATIVE measure of some aspect of the level of service provided." (SRE Book - Chapter: Service Level Objectives). Examples include error rate, latency, throughput, and availability. SLIs are measurements, not targets-targets are SLOs.

Option D repeats Google's definition almost exactly.

Option C incorrectly describes an SLO (a target), not an SLI.

Options A and B mention subjective assessments-SRE explicitly rejects subjectivity in measurement, stating: "SLIs must be objective and measurable." Thus, D is the correct and SRE-authentic answer.

NEW QUESTION # 67

Identify the missing word(s) in the following sentence:

Site reliability engineering is a _____ approach to IT operations.

- A. structural engineering
- B. simulation engineering
- C. security engineering
- D. software engineering

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Google's SRE definition is explicit: "Site Reliability Engineering is what happens when you ask a software engineer to design an operations team." (SRE Book - Introduction). This clearly defines SRE as a software engineering approach applied to operational problems. The goal is to use software techniques-automation, coding, testing, version control, CI/CD, observability-to improve reliability and reduce toil. The book emphasizes: "SRE applies software engineering to operations work." (SRE Book - What Is SRE?).

Option C is the only answer fully aligned with the official definition.

Options A, B, and D do not correspond to the SRE definition provided by Google.

Thus, the correct missing phrase is software engineering.

NEW QUESTION # 68

Identify the defense-in-depth (DiD) layer where data flows in from, and out to, other networks, including the Internet.

- A. Perimeter layer
- B. Physical layer
- C. Host layer
- D. Data layer

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Defense-in-Depth (DiD) is a layered security strategy referenced in SRE's discussions of secure infrastructure and resilience. The perimeter layer is responsible for controlling and monitoring traffic flowing into and out of the network from external sources, such as the public Internet. This includes firewalls, intrusion detection systems, load balancers, and boundary network controls.
While SRE focuses primarily on reliability, the SRE Book stresses the importance of resilient system boundaries: "Perimeter protections are critical where external traffic enters the system." (SRE Book - Security and Infrastructure considerations).
Option C correctly identifies the Perimeter Layer as the network boundary where data flows in/out from other networks-including the Internet.
Option A (Host layer) secures individual machines.
Option B (Physical layer) refers to hardware, power, racks, etc.
Option D (Data layer) protects stored data, not ingress/egress traffic.
Thus, C is correct.

NEW QUESTION # 69
Which of the following describes work that would be considered "toil"?

- A. Work that is devoid of enduring value
- B. Engineering work that does not add enduring value
- C. Work that has some enduring value but requires manual tasks
- D. Engineering work to add service features

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
"Toil" in SRE has a very specific meaning. According to the Site Reliability Engineering Book, Chapter
"Eliminating Toil":
"Toil is the kind of work tied to running a production service that tends to be manual, repetitive, automatable, tactical, has no enduring value, and scales linearly as the service grows." The key phrase is "no enduring value." Toil does not produce lasting improvement, even though it may be necessary in the short term. It consumes engineering effort without making the system better over time.
Why the other options are incorrect:
* B Work that has some enduring value cannot be classified as toil by definition.
* C Engineering work that adds service features is explicitly non-toil, because SRE defines feature work as "project work," not operational toil.
* D Seems close but is misleading: engineering work without enduring value is poor engineering, not necessarily toil. Toil refers to operations workload specifically.
Thus, A is the correct and precise definition of toil.

NEW QUESTION # 70
Which of the following BEST describes the capabilities and scope of DevOps continuous monitoring?

- A. The use of multiple monitoring tools and an event management process for all applications
- B. The application of widespread system event monitoring by automating the end-user transactions
- C. The combination of tools and the process for rapid incident detection and response of cloud services
- D. The deployment of a set of integrated monitoring tools and event thresholds for infrastructure

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
SRE and DevOps share a common view of continuous monitoring-a holistic approach that enables rapid detection, diagnosis, and response across all parts of the system. The SRE Book states: "Monitoring must enable fast detection of anomalies, quick diagnosis,

and effective incident response." Continuous monitoring includes application metrics, infrastructure signals, logs, traces, service health, and user-experience telemetry.

Option B captures this accurately: a combination of tools and processes enabling rapid incident detection and response, especially for cloud services.

Option A is partially correct but too narrow (only end-user transactions).

Option C is generic and does not emphasize continuous or rapid detection.

Option D describes infrastructure monitoring only-not full DevOps/SRE continuous monitoring.

Thus, B is the correct answer.
