

# Precise 2V0-17.25 Latest Test Answers Offers you high-effective Actual VMware VMware Cloud Foundation 9.0 Administrator Exam Products

Get 2025 Update VCP-VCF 2V0-17.25 Dumps To Study The Latest Questions

**Exam** : **2V0-17.25**

**Title** : VMware Cloud Foundation  
9.0 Administrator

<https://www.passcert.com/2V0-17.25.html>

1/6

BONUS!!! Download part of VCEEngine 2V0-17.25 dumps for free: <https://drive.google.com/open?id=1WoWO8sSF3OFJEKBLVykrmghlHkljHtq>

The 2V0-17.25 prep guide adopt diversified such as text, images, graphics memory method, have to distinguish the markup to learn information, through comparing different color font, as well as the entire logical framework architecture, let users of the 2V0-17.25 training dump on the premise of grasping the overall layout, better clues to the formation of targeted long-term memory, and through the cycle of practice, let the knowledge more deeply printed in my mind. The 2V0-17.25 Exam Questions are so scientific and reasonable that you can easily remember everything of the 2V0-17.25 exam.

## VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.</li> </ul>

## Quiz 2026 VMware Useful 2V0-17.25: VMware Cloud Foundation 9.0 Administrator Latest Test Answers

If you have any doubts about the 2V0-17.25 pdf dump, please feel free to contact us, our team I live 24/7 to assist you and we will try our best to satisfy you. Now, you can download our 2V0-17.25 free demo for try. If you think our 2V0-17.25 study torrent is valid and worthy of purchase, please do your right decision. VCEngine will give you the best useful and latest 2V0-17.25 Training Material and help you 100% pass. Besides, your information is 100% secure and protected, we will never share it to the third part without your permission.

### VMware Cloud Foundation 9.0 Administrator Sample Questions (Q45-Q50):

#### NEW QUESTION # 45

An administrator configures a Local Content Library on vCenter Server A, enables publishing, and creates Subscribed Content Libraries on vCenter Server B and vCenter Server C using the publishing URL. However, the contents of the subscribed libraries on vCenter B and C are not synchronizing with the source library on vCenter A.

Which step should the administrator take to troubleshoot the issue?

- A. Recreate the Subscribed Content Libraries on vCenter B and C with a new publishing URL from vCenter Server A to reset the synchronization configuration.
- B. Enable bidirectional synchronization on the Content Library settings to ensure updates are propagated back and forth between vCenter Server A and the subscribed libraries.
- C. Manually export the library content from vCenter Server A and import it into the subscribed libraries on vCenter B and C to initialize synchronization.
- D. Verify that network connectivity exists between vCenter Server A and the other two vCenters, and ensure that the required ports for Content Library synchronization are open.

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When subscribed Content Libraries are not synchronizing with the source Local Content Library, the primary troubleshooting step, as described in the official VMware documentation, is to verify network connectivity between the source vCenter (vCenter Server A) and the subscribing vCenters (vCenter Server B and C). The administrator must ensure that all required network ports for Content Library synchronization are open and accessible. Without proper network communication, the subscribing vCenters cannot retrieve or sync content from the published library.

Other steps, such as recreating the libraries, enabling bidirectional sync, or manually importing content, do not address the core issue of connectivity and port access, which is essential for automated synchronization to function correctly.

**NEW QUESTION # 46**

When planning to migrate from an external Platform Services Controller (PSC) architecture to an embedded PSC in vCenter Server Appliance (VCSA), which critical step must be performed first to ensure a supported migration path?

- **A. Confirming that the vCenter and PSC are at the same version and build**
- B. Detaching all ESXi hosts from vCenter prior to migration
- C. Placing the PSC in Maintenance Mode
- D. Adding an extra vNIC to the PSC for data replication

**Answer: A**

Explanation:

The external PSC and vCenter must match in version/build before an embedded migration. Having them mismatched can lead to migration failure. Maintenance Mode (C) doesn't apply to PSC, and removing hosts first (D) isn't a requirement.

**NEW QUESTION # 47**

Which statement describes Harbor?

- A. Harbor requires all images be pulled from GitHub for validation.
- B. Harbor is an image scanner used to verify that images are free from vulnerabilities and patches.
- **C. Harbor is an open source registry that secures artifacts with policies and RBAC, scans images for vulnerabilities, and signs images as trusted.**
- D. Harbor, formerly known as Bitnami, is an image catalog for downloading verified open-source packages.

**Answer: C**

Explanation:

According to the VCF 9.0 Container Registry Documentation, Harbor is defined as:

"Harbor is an open source registry that secures artifacts with policies and role-based access control, ensures images are scanned and free from vulnerabilities, and signs images as trusted." This description aligns exactly with option A. Harbor is not Bitnami (B), though it integrates with open-source images. It includes vulnerability scanning but is not only an image scanner (C). It does not require GitHub as a source (D); Harbor can integrate with multiple registries.

Therefore, Harbor's primary role within VCF is to act as a secure image registry with RBAC, scanning, and signing capabilities.

**NEW QUESTION # 48**

An administrator needs to ensure that specific virtual machines within a VMware Cloud Foundation (VCF) environment use storage that can tolerate at least two host failures within a vSAN cluster. Due to financial limitations, the configuration used must prioritize providing the highest level of usable disk space for the datastore.

Which three steps should be performed to meet the requirements? (Choose three.)

- A. Set Failures to Tolerate to "2 failures - RAID-1 (Mirroring)" in the policy configuration.
- **B. Apply the storage policy to the target VMs.**
- **C. Create a new VM Storage Policy in the vSphere Client.**
- **D. Set Failures to Tolerate to "2 failures - RAID-6 (Erasure Coding)" in the policy configuration.**
- E. Configure the policy to use thin provisioning.
- F. Reconfigure the existing Default Storage Policy in the vSphere Client.

**Answer: B,C,D**

Explanation:

To meet the requirement for at least two host failures tolerance while also maximizing usable disk space in a vSAN cluster, the recommended configuration is to use RAID-6 (Erasure Coding) with a "2 failures" policy.

The necessary steps as described in VMware documentation are:

Create a new VM Storage Policy in the vSphere Client (D): Administrators should create a new policy rather than modify the default, to apply specific rules for select VMs.

Set Failures to Tolerate to "2 failures - RAID-6 (Erasure Coding)" in the policy configuration (C): This setting ensures that data can survive up to two host failures and provides higher usable capacity than RAID-1 mirroring.

Apply the storage policy to the target VMs (B): The new policy must be applied to the required virtual machines to ensure they benefit from the specified level of protection.

Using RAID-6 (Erasure Coding) is preferred for capacity efficiency, especially when compared to RAID-1, and aligns with the financial consideration of maximizing usable disk space. Thin provisioning is not directly related to fault tolerance or disk space efficiency in the context of failures to tolerate, and modifying the default policy is not best practice for granular requirements.

#### NEW QUESTION # 49

An administrator must ensure the network team can fully utilize the Network Operations feature in VCF. What component must be installed and configured?

- A. NSX Networking
- B. VCF Operations Collector
- C. VCF Operations for Networks
- D. vDefend Firewall

**Answer: C**

Explanation:

VCF Operations for Networks (formerly vRNI) provides visibility into network traffic flows, NSX fabric health, application dependency mapping, and micro-segmentation planning. It integrates directly into VCF Operations dashboards under Network Operations.

The vDefend firewall is unrelated, as it provides workload-level security. The VCF Operations Collector is required for telemetry ingestion but does not provide full Network Operations. NSX itself provides the underlying virtual networking, but it must be monitored through VCF Operations for Networks.

#### NEW QUESTION # 50

.....

Computers are changing our life day by day. We can do many things on computers. Technology changes the world. If you have dream to be a different people, obtaining a VMware certification will be the first step. 2V0-17.25 learning materials will be useful for you. As you can see the Forbes World's Billionaires List shows people starting bare-handed are mostly engaging in IT field. 2V0-17.25 Learning Materials may be the first step to help you a different road to success.
