

With three versions of products, our AZ-700 learning questions can satisfy different taste and preference of customers with different use: PDF & Software & APP versions. Without ambiguous points of questions make you confused, our AZ-700 practice materials can convey the essence of the content suitable for your exam. With our AZ-700 exam guide, you will achieve what you are expecting with ease.

Section	Objectives
Design and implement hybrid networking	- Hybrid connectivity architecture • 1. Point-to-site VPN configuration • 2. Site-to-site VPN configuration • 3. ExpressRoute design considerations - On-premises integration • 1. DNS resolution between on-prem and Azure • 2. Routing between environments
Design and implement routing and load balancing	- Load balancing solutions • 1. Application Gateway • 2. Azure Load Balancer • 3. Azure Front Door - Routing configuration • 1. User-defined routes (UDR) • 2. System routes and route tables

Section	Objectives
Design and implement hybrid networking	- Hybrid connectivity architecture • 1. Point-to-site VPN configuration • 2. Site-to-site VPN configuration • 3. ExpressRoute design considerations - On-premises integration • 1. DNS resolution between on-prem and Azure • 2. Routing between environments
Design and implement routing and load balancing	- Load balancing solutions • 1. Application Gateway • 2. Azure Load Balancer • 3. Azure Front Door - Routing configuration • 1. User-defined routes (UDR) • 2. System routes and route tables

- Monitoring and diagnostics

- 1. Network Watcher tools
- 2. Log Analytics integration
- 3. Azure Monitor for networks

Design and implement network security and monitoring

- Network security controls

- 1. Azure Firewall configuration
- 2. Network Security Groups (NSG)
- 3. DDoS Protection Standard

- Virtual network design

- 1. VNet and subnet planning
- 2. IP addressing strategies (CIDR)
- 3. VNet peering configuration

Design and implement core networking infrastructure

- Name resolution and DNS

- 1. Azure DNS zones
- 2. Private DNS zones

- Private connectivity

- 1. Private endpoints configuration
- 2. Azure Private Link

Design and implement private access to Azure services

- Service access controls

- 1. Service endpoints
- 2. Access restriction policies

AZ-700 New Question, AZ-700 Valid Exam Materials

We boost a professional expert team to undertake the research and the production of our AZ-700 learning file. We employ the senior lecturers and authorized authors who have published the articles about the test to compile and organize the AZ-700 prep guide dump. Our expert team boosts profound industry experiences and they use their precise logic to verify the test. They provide comprehensive explanation and integral details of the answers and questions. Each question and answer are researched and verified by the industry experts. Our team updates the AZ-700 Certification material periodically and the updates include all the questions in the past thesis and the latest knowledge points. So our service team is professional and top-tanking.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q313-Q318):

NEW QUESTION # 313

You have Azure App Service apps in the West US Azure region as shown in the following table.

Name	App Service Plan	Number of instances
App1	ASP1	3
App2	ASP1	3
App3	ASP2	2
App4	ASP3	1

You need to ensure that all the apps can access the resources in a virtual network named VNet1 without forwarding traffic through

the internet.

How many integration subnets should you create?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: E

Explanation:

One per App Service Plan: The feature supports only one virtual interface per worker. One virtual interface per worker means one regional virtual network integration per App Service plan. All the apps in the same App Service plan can only use the same virtual network integration to a specific subnet. If you need an app to connect to another virtual network or another subnet in the same virtual network, you need to create another App Service plan. The virtual interface used isn't a resource that customers have direct access to.

<https://docs.microsoft.com/en-us/azure/app-service/overview-vnet-integration#how-regional-virtual-network-integration-works>

NEW QUESTION # 314

What should you implement to meet the virtual network requirements for the virtual machines that connect to Vnet4 and Vnet5?

- A. a virtual network peering
- B. a private link service
- C. a service endpoint
- D. a private endpoint
- E. a routing table

Answer: A

Explanation:

There is no virtual network peering between VM4's VNet (VNet3) and VM5's VNet (VNet4). To enable the VMs to communicate over the Microsoft backbone network a VNet peering is required between VNet3 and VNet4.

NEW QUESTION # 315

You have an Azure subscription that contains a virtual network named Vnet1. Vnet1 has a /24 IPv4 address space.

You need to subdivide Vnet1. The solution must maximize the number of usable subnets.

What is the maximum number of IPv4 subnets you can create, and how many usable IP addresses will be available per subnet? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Usable IP addresses: 7, 1, 3, 7

IPv4 subnets: 128, 16, 32, 64, 128

Answer:

Explanation:

Answer Area

Microsoft

Usable IP addresses: 7

IPv4 subnets: 128

Explanation:

Answer Area

Microsoft

Usable IP addresses: 7

IPv4 subnets: 128

NEW QUESTION # 316

You have an Azure virtual network named Vnet1 that contains two subnets named Subnet1 and Subnet2. You have the NAT gateway shown in the NATgateway1 exhibit, (Click the NATgateway1 tab)

NATgateway1

Microsoft

Delete Refresh

Essentials

Resource group (change) : RG1

Location : North Europe (UK)

Subscription (change) : Microsoft

Subscription ID : 169d1bba-ba4c-471c-b513-092eb7063265

Virtual network : Vnet1

Subnets : 1

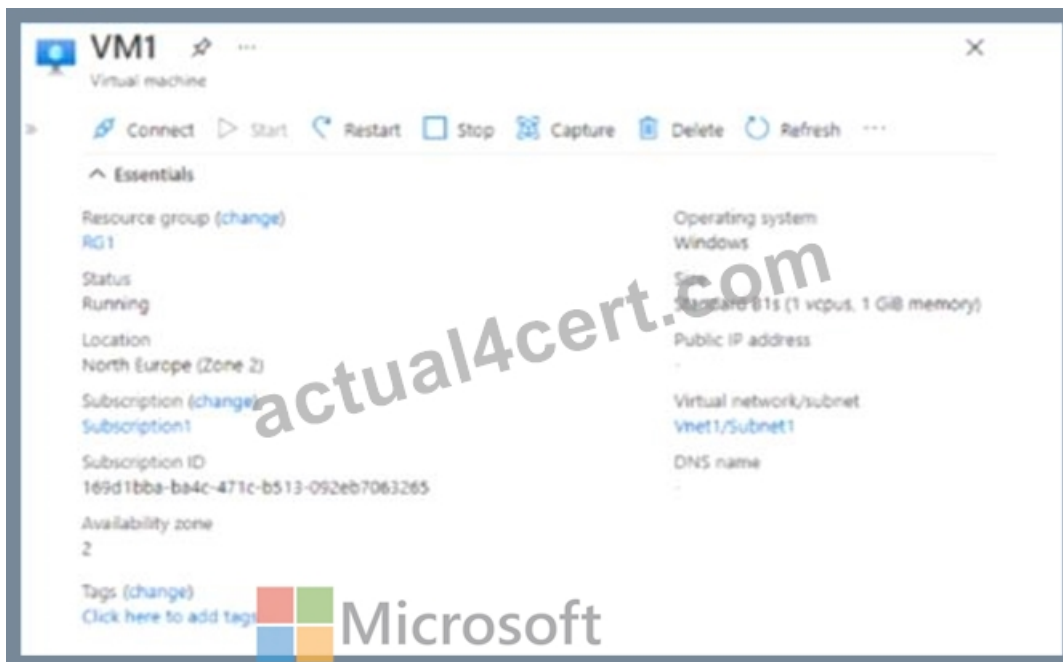

Public IP addresses : 0

Public IP prefixes : 1

Tags (change) : Click here to add tags

JSON View

You have the virtual machine shown in the VM1 exhibit, (Click the VM1 tab)

Subnet1 is configured as shown in the Subnet1 exhibit, (Click the Subnet1 tab)

For each of the following statements, select Yes if the statement is true. Otherwise, select No

Statements	Yes	No
VM1 can communicate outbound by using NATgateway1.	☐	☐
The virtual machines in Subnet2 communicate outbound by using NATgateway1.	☐	☐
All the virtual machines that use NATgateway1 to connect to the internet use the same public IP address.	☐	☐

Answer:

Explanation:

Statements	Yes	No
VM1 can communicate outbound by using NATgateway1.	☒	☐
The virtual machines in Subnet2 communicate outbound by using NATgateway1.	☒	☐
All the virtual machines that use NATgateway1 to connect to the Internet use the same public IP address.	☐	☒

NEW QUESTION # 317

You have an Azure application gateway.

You need to create a rewrite rule that will remove the origin port from the HTTP header of incoming requests that are being forwarded to the backend pool.

How should you configure each setting? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
