Topic 3	<ul style="list-style-type: none"> Cybersecurity: Cybersecurity, also known as IT security or computer security, involves safeguarding computer systems, networks, and data from unauthorized access, theft, damage, or disruption to ensure the integrity and availability of digital information.
Topic 4	<ul style="list-style-type: none"> Data Security: Data security refers to protecting digital information—such as that stored in databases or networks—from destruction, unauthorized access, or malicious attacks, ensuring confidentiality and integrity.
Topic 5	<ul style="list-style-type: none"> Risk Management: Risk management is the systematic process of identifying, evaluating, and implementing strategies to reduce or control the impact of potential uncertainties on organizational goals.
Topic 6	<ul style="list-style-type: none"> Self Confidence: Self-confidence is the belief in one's abilities, competence, and value, reflecting a sense of assurance and inner strength.

Reliable ISO-IEC-27001-Foundation Test Book, ISO-IEC-27001-Foundation Valid Test Preparation

Our ISO-IEC-27001-Foundation learning guide allows you to study anytime, anywhere. If you are concerned that your study time cannot be guaranteed, then our ISO-IEC-27001-Foundation learning guide is your best choice because it allows you to learn from time to time and make full use of all the time available for learning. Our ISO-IEC-27001-Foundation learning guide is for the world and users are very extensive. In order to give users a better experience, we have been constantly improving. The high quality and efficiency of ISO-IEC-27001-Foundation Test Guide has been recognized by users. The high passing rate of ISO-IEC-27001-Foundation exam training is its biggest feature. As long as you use ISO-IEC-27001-Foundation test guide, you can certainly harvest what you want thing.

APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Identify the missing word(s) in the following sentence.

"Information security, cybersecurity and privacy protection - [?]" is the title of ISO/IEC 27005.

- A. Information security controls
- B. Guidelines for information security management systems auditing
- C. Information security management systems - Requirements
- **D. Guidance on managing information security risks**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27005 standards:

ISO/IEC 27005:2022 is titled:

"Information security, cybersecurity and privacy protection - Guidance on managing information security risks." This standard provides structured methodologies for identifying, analyzing, evaluating, and treating risks, in alignment with ISO/IEC 27001's risk management requirements (Clause 6.1.2 and 6.1.3). It supports organizations in implementing the risk management process that underpins an ISMS. Options A and B are titles of other ISO standards (ISO/IEC 27007 for auditing, ISO/IEC 27001 for requirements). Option D refers to ISO/IEC 27002 (controls).

Thus, the correct answer is C: Guidance on managing information security risks.

NEW QUESTION # 43

When are the information security policies required to be reviewed, according to the Policies for information security control?

- A. According to a schedule defined by the Certification Body
- B. Every six months
- **C. At planned intervals and if significant changes occur**
- D. Annually

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.1 (Policies for information security) specifies:

"Information security policy and topic-specific policies should be defined, approved by management, published, communicated to and acknowledged by relevant personnel and relevant interested parties, and reviewed at planned intervals and if significant changes occur." This clearly identifies the review frequency requirement: planned intervals and whenever there are significant changes. Options A and B (six-monthly or annually) are not prescribed by ISO - timing is left to the organization. Option C is also wrong, since Certification Bodies do not dictate policy review schedules.

Therefore, the verified correct answer is D.

NEW QUESTION # 44

Identify the missing word in the following sentence.

According to ISO/IEC 27000, the definition of risk [?] is a "process to comprehend the nature of risk and to determine the level of risk."

- A. Management
- **B. Analysis**
- C. Assessment
- D. Evaluation

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27000 standards:

ISO/IEC 27000 defines:

- * Risk analysis: "process to comprehend the nature of risk and to determine the level of risk" (Clause 3.58).
- * Risk assessment: the overall process of risk identification, risk analysis, and risk evaluation.
- * Risk evaluation: compares results of risk analysis against risk criteria to determine priority.
- * Risk management: coordinated activities to direct and control an organization with regard to risk.

Therefore, the missing word in the given definition is "analysis".

This is important for ISMS implementation: organizations must understand the distinctions. Risk analysis is the core technical evaluation stage, while assessment is the broader process including evaluation, and management refers to the overall governance of risks.

Thus, the correct verified answer is B: Analysis.

NEW QUESTION # 45

Which action is a required response to an identified residual risk?

- A. By default, it shall be controlled by information security awareness and training
- **B. It shall be reviewed by the risk owner to consider acceptance**
- C. Top management shall delegate its treatment to risk owners
- D. The organization shall change practices to avoid the risk occurring

Answer: B

Explanation:

Clause 6.1.3 (e) specifies:

"The organization shall obtain risk owners' approval of the information security risk treatment plan and acceptance of the residual information security risks." This confirms that residual risks - those remaining after risk treatment - must be reviewed and formally accepted by the designated risk owner. Option A is incorrect; awareness training is not a default control for all residual risks. Option B misrepresents leadership responsibility; top management ensures processes exist, but risk owners formally approve residual risk. Option D (avoiding risk) is a treatment option, not the mandated requirement for residual risks.

Thus, the required response is C: Review and acceptance by the risk owner.

NEW QUESTION # 46

What is the name of the control clause used to control information security breaches within Annex A of ISO/IEC 27001?

- **A. Information security event reporting**
- B. Reporting information security incidents
- C. Information security event management
- D. Response to information security events

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A in ISO/IEC 27001 refers directly to ISO/IEC 27002 for control guidance. In ISO/IEC 27002:2022, Clause 6.8 is titled: "Information security event reporting - Information security events should be reported through appropriate management channels as

quickly as possible." This control ensures breaches, incidents, or suspected issues are reported for action. The other options (B, C, D) are not the exact titles in Annex A. The official title is Information security event reporting, confirming
