About the oncoming SPLK-3002 exam, every exam candidates are wishing to utilize all intellectual and technical skills to solve the obstacles ahead of them to go as well as it possibly could. So the pending exam causes a panic among the exam candidates. The SPLK-3002 exam prepare of our website is completed by experts who has a good understanding of real exams and have many years of experience writing SPLK-3002 Study Materials. They know very well what candidates really need most when they prepare for the exam. They also understand the real exam situation very well. So they compiled SPLK-3002 exam prepare that they hope to do their utmost to help candidates pass the exam and get what job they want.

Splunk SPLK-3002 exam is designed to test the knowledge and skills of IT professionals who wish to become certified Splunk IT Service Intelligence (ITSI) Administrators. Splunk IT Service Intelligence Certified Admin certification exam is a comprehensive assessment of an individual's understanding of the Splunk platform, including ITSI, and their ability to use it to analyze and visualize data from various sources. SPLK-3002 exam measures the candidate's ability to design, configure, and administer ITSI components and integrate them with other Splunk components.

Splunk SPLK-3002 Certification Exam is designed for IT professionals who want to demonstrate their expertise in managing and using Splunk's IT Service Intelligence (ITSI) platform. SPLK-3002 exam covers a range of topics, including ITSI architecture and deployment, data ingestion and normalization, event management, and service analytics. Passing SPLK-3002 exam will validate your skills and knowledge in using Splunk ITSI to improve IT service delivery, increase operational efficiency, and drive business

outcomes.

## SPLK-3002 Latest Braindumps - SPLK-3002 Reliable Exam Syllabus

Different person has different goals, but our Free4Torrent aims to help you successfully pass SPLK-3002 exam. Maybe to pass SPLK-3002 exam is the first step for you to have a better career in IT industry, but for our Free4Torrent, it is the entire meaning for us to develop SPLK-3002 exam software. So we try our best to extend our dumps, and our Free4Torrent elite comprehensively analyze the dumps so that you are easy to use it. Besides, we provide one-year free update service to guarantee that the SPLK-3002 Exam Materials you are using are the latest.

## Splunk IT Service Intelligence Certified Admin Sample Questions (Q51-Q56):

### NEW QUESTION # 51

When working with a notable event group in the Notable Events Review dashboard, which of the following can be set at the individual or group level?

- A. Service, status, owner.
- B. Severity, comments, service.
- **C. Severity, status, owner.**
- D. Severity, status, service.

**Answer: C**

Explanation:

In the Notable Events Review dashboard within Splunk IT Service Intelligence (ITSI), when working with a notable event group, users can set or adjust certain attributes at the individual event level or at the group level.

These attributes include:

\* Severity: The importance or impact level of the notable event or group, which can be adjusted to reflect the current assessment of the situation.

\* Status: The current state of the notable event or group, such as "New," "In Progress," or "Resolved," indicating the progress in addressing the event or group.

\* Owner: The user or team responsible for managing and resolving the notable event or group.

These settings allow for effective management and tracking of notable events, ensuring that they are appropriately prioritized, acted upon, and resolved by the responsible parties.

### NEW QUESTION # 52

In a distributed deployment, the ITSI SA-IndexCreation should get installed on which of the following Splunk instance types?

- A. Indexers and forwarders
- B. Search heads, indexers, and heavy forwarders
- **C. Indexers and search heads**
- D. Search heads, indexers, and universal forwarders

**Answer: C**

Explanation:

In a distributed Splunk Enterprise deployment running Splunk IT Service Intelligence (ITSI), the SA

#IndexCreationapp is responsible for creating the necessary custom indexes (such as itsi\_summary, itsi\_notable, etc.) that ITSI uses to store metrics and notable events. These indexes must exist on the indexer layer because indexers are the only Splunk instance type that can actually host and write indexed data.

Therefore, SA#IndexCreation is installed on all indexers in the deployment to ensure that the index definitions are present wherever indexed data is stored. Meanwhile, the main ITSI app (which contains the UI, KPI scheduling, service modeling, analytics, and anomaly detection) is installed on search heads since search heads orchestrate searches across the distributed environment and provide ITSI's interactive features.

Universal forwarders and heavy forwarders are not appropriate targets for SA#IndexCreation because forwarders do not host writable index locations for ITSI summary and notable event indexes. Thus, the correct installation pattern for SA#IndexCreation in a distributed environment is on both the indexers and search heads, enabling proper index definition and search functionality across

the deployment.

#### NEW QUESTION # 53

Which of the following are characteristics of service templates? (select all that apply)

- A. Service templates contain domain specific dashboards and deep dives.
- B. Service templates can contain specific or generic entity rules.
- C. Service templates contain KPIs and KPI thresholds.
- D. Service templates can be modified after services are instantiated from it.

**Answer: B,C**

Explanation:

Service templates in Splunk IT Service Intelligence (ITSI) are designed to streamline the creation of services by providing pre-defined configurations:

B) Service templates contain KPIs and KPI thresholds: This allows for the standardized deployment of services with predefined performance indicators and their associated thresholds, ensuring consistency across similar services.

C) Service templates can contain specific or generic entity rules: These rules define how entities are associated with services created from the template, allowing for both broad and targeted applicability.

While service templates contain configurations for KPIs, thresholds, and entity rules, the ability to modify templates after services have been instantiated from them is limited. Changes to a template do not retroactively affect services already created from that template. Moreover, service templates do not inherently contain domain-specific dashboards or deep dives; these are created separately within ITSI.

#### NEW QUESTION # 54

What are valid considerations when designing an ITSI Service? (Choose all that apply.)

- A. Service access control requirements for ITSI Team Access should be considered, and appropriate teams provisioned prior to creating the ITSI Service.
- B. Entities, entity meta-data, and entity rules should be planned carefully to support the service design and configuration.
- C. Services, entities, and saved searches are stored in the ITSI app, while events created by KPI execution are stored in the itsi\_summary index.
- D. Backfill of a KPI should always be selected so historical data points can be used immediately and alerts based on that data can occur.

**Answer: A,B,C**

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/Configure/ImplementPerms> A, B, and C are correct answers because service access control requirements for ITSI Team Access should be considered before creating the ITSI Service, as different teams may have different permissions and views of the service data. Entities, entity meta-data, and entity rules should also be planned carefully to support the service design and configuration, as they determine how ITSI maps data sources to services and KPIs.

Services, entities, and saved searches are stored in the ITSI app, while events created by KPI execution are stored in the itsi\_summary index for faster retrieval and analysis. References: ITSI service design best practices, Overview of ITSI indexes

#### NEW QUESTION # 55

Which of the following is a valid type of Multi-KPI Alert?

- A. Rise over run.
- B. Score over composite.
- C. Value over time.
- D. Status over time.

**Answer: C**

Explanation:

Reference:

B is the correct answer because value over time is a valid type of Multi-KPI Alert in ITSI. A Multi-KPI Alert is a type of alert that triggers when multiple KPIs from one or more services meet certain conditions within a specified time range. Value over time is a condition that compares the current value of a KPI to its previous values over a specified time range. For example, you can create a Multi-KPI Alert that triggers when the CPU usage and memory usage of a service are both higher than their average values in the last 24 hours. Reference: [Create Multi-KPI alerts in ITSI], [Multi-KPI alert conditions in ITSI]

## NEW QUESTION # 56

.....

Free4Torrent offers Splunk IT Service Intelligence Certified Admin (SPLK-3002) practice exams (desktop & web-based) which are customizable. It means candidates can set time and Splunk SPLK-3002 questions of the SPLK-3002 practice exam according to their learning needs. The Real SPLK-3002 Exam environment of practice test help test takers to get awareness about the test pressure so that they become capable to counter this pressure during the final exam.
