## **WGU Information Technology Management QGC1 Sample Questions (Q93-Q98):**

### **NEW QUESTION # 93**

When should a product management team utilize a prototype?

- A. While creating a way to show how the various features in a new application will work together.
- B. When testing various user interface designs for a new application
- C. While creating training on a new application for IT Technicians
- D. **When a preliminary model is needed to seek user feedback**

#### **Answer: D**

Explanation:

- \* Purpose of Prototypes in Product Management:
- \* Prototypes provide a working model of the product to collect user feedback.
- \* This helps the product management team refine the application and address usability issues.
- \* Why Other Options Are Incorrect:
  - \* Option A: Showing feature interaction is a secondary purpose but not the primary reason for using a prototype.
  - \* Option C: Testing user interfaces may involve prototypes, but the main purpose is feedback collection.
  - \* Option D: Prototypes are not typically used for creating training materials.

### **NEW QUESTION # 94**

Which type of testing in the systems development life cycle (SDLC) focuses on how different components of the software work together?

- A. **Integration testing**
- B. Acceptance testing
- C. Unit testing
- D. Parallel testing

#### **Answer: A**

Explanation:

Integration testing focuses on ensuring that different modules or components of the system work together correctly. This validates that individual units, once combined, interact seamlessly and produce the expected results.

Option B (Parallel testing): Compares old and new systems running together.

Option C (Unit testing): Tests individual components in isolation.

Option D (Acceptance testing): Validates the entire system with user requirements.

Thus, the type of testing that ensures components work together is Integration testing.

### **NEW QUESTION # 95**

During which phase of the systems development life cycle (SDLC) does an organization turn a project's focus to a physical or technical point of view by defining the architecture that will support the system?

- A. **Design**
- B. Implementation
- C. Development

- D. Maintenance

**Answer: A**

Explanation:

The Design phase of the SDLC shifts the project from a logical/business focus to a physical/technical perspective. In this phase, system architecture, database designs, user interfaces, and network requirements are defined to provide the technical blueprint for system development.

Option A (Maintenance): Focuses on updates and fixes after deployment.

Option B (Development): Involves building the system using code.

Option D (Implementation): Deploys the system into production.

Thus, the phase that defines the architecture is the Design phase.

**NEW QUESTION # 96**

What are the other elements in the triple constraint along with cost?

- A. Procurement and compliance
- B. Quality and resources
- C. Risk and integration
- D. Scope and time

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In project management, the triple constraint (often shown as a triangle) traditionally consists of:

Scope - What work and deliverables are included.

Time - The schedule or duration of the project.

Cost - The budget and financial resources.

These three are interdependent:

If scope increases without adjustment, time and cost are likely to increase.

Compressing time may increase cost or require scope reduction.

Reducing cost may affect the scope or timeline that can be supported.

Therefore, when cost is one point of the triple constraint, the other two elements are scope and time.

Why the other options are incorrect:

A . Procurement and compliance - These are project management considerations but not part of the classic triple constraint.

B . Risk and integration - These are knowledge areas in project management, not the three core constraints.

C . Quality and resources - Quality is often impacted by the triple constraint, and resources support it, but neither are the traditional two other points.

Thus, Option D. Scope and time correctly identifies the other elements of the triple constraint along with cost.

**NEW QUESTION # 97**

Which three primary elements of information infrastructure support ongoing operations? Choose 3 answers.

- A. Disaster recovery plans
- B. Augmentation plans
- C. Authentication plans
- D. Backup and recovery plans
- E. Business continuity plans

**Answer: A,D,E**

Explanation:

Primary Elements of Information Infrastructure:

Business Continuity Plans (BCP): Ensure that critical business operations continue during and after a disruption.

Disaster Recovery Plans (DRP): Focus on restoring IT systems and data after a disaster.

Backup and Recovery Plans: Protect against data loss and enable data restoration after failures.

Why Other Options Are Incorrect:

Option B (Augmentation plans): Not a standard element of information infrastructure.

Option C (Authentication plans): Authentication is part of security protocols, not infrastructure support.
