As we all know, for candidates all they do is to pass the exam. If you choose us, we will help you pass the exam successfully. With the pass rate is 98.65% for Associate-Cloud-Engineer study materials, we can ensure you pass the exam, and we also pass guarantee and money back guarantee if you fail to pass the exam. Besides, we have the skilled professionals to compile and verify the Associate-Cloud-Engineer Exam Brindumps, they have covered most knowledge points of the exam. Associate-Cloud-Engineer study materials contain both questions and answers, and you can have a quickly check after practicing.

Google Associate-Cloud-Engineer Certification Exam is an excellent opportunity for IT professionals to validate their skills and knowledge in cloud computing. It is a valuable credential for individuals who want to advance their careers in the IT industry and gain recognition for their expertise in Google Cloud technologies. With the increasing demand for cloud computing professionals, obtaining this certification can open up new career opportunities and help individuals stay competitive in the job market.

Google Associate Cloud Engineer exam is a certification offered by Google Cloud Platform for individuals who want to demonstrate their knowledge and skills in cloud computing. Google Associate Cloud Engineer Exam certification is designed for individuals with a basic understanding of cloud technologies and the ability to use Google Cloud Platform (GCP) services. Associate-Cloud-Engineer Exam Tests an individual's knowledge in setting up a cloud solution environment, deploying applications, monitoring operations, and managing GCP projects.

Newest Associate-Cloud-Engineer Valid Exam Forum offer you accurate Exam Paper Pdf | Google Associate Cloud Engineer Exam

Perhaps it was because of the work that there was not enough time to learn, or because the lack of the right method of learning led to a lot of time still failing to pass the Associate-Cloud-Engineer examination. Whether you are the first or the second or even more taking Associate-Cloud-Engineer examination, our Associate-Cloud-Engineer exam prep not only can help you to save much time and energy but also can help you pass the exam. In the other words, passing the exam once will no longer be a dream.

Google Associate Cloud Engineer Exam Sample Questions (Q284-Q289):

NEW QUESTION # 284

Your company runs one batch process in an on-premises server that takes around 30 hours to complete. The task runs monthly, can be performed offline, and must be restarted if interrupted.

You want to migrate this workload to the cloud while minimizing cost. What should you do?

- A. Migrate the workload to a Compute Engine VM.
Start and stop the instance as needed.

- B. Migrate the workload to a Compute Engine Preemptible VM.
- C. Create an Instance Template with Preemptible VMs On.
Create a Managed Instance Group from the template and adjust Target CPU Utilization.
Migrate the workload.
- D. Migrate the workload to a Google Kubernetes Engine cluster with Preemptible nodes.

Answer: A

Explanation:

Install the workload in a compute engine VM, start and stop the instance as needed, because as per the question the VM runs for 30 hours, process can be performed offline and should not be interrupted, if interrupted we need to restart the batch process again. Preemptible VMs are cheaper, but they will not be available beyond 24hrs, and if the process gets interrupted the preemptible VM will restart.

NEW QUESTION # 285

You need a dynamic way of provisioning VMs on Compute Engine. The exact specifications will be in a dedicated configuration file. You want to follow Google's recommended practices. Which method should you use?

- A. Cloud Composer
- B. Unmanaged Instance Group
- C. Deployment Manager
- D. Managed Instance Group

Answer: D

NEW QUESTION # 286

A cloud engineer has been assigned to work on a running project. He wants to know which VMs are running in the project. How could the cloud engineer get the information of the all VMs running in the project?

- A. Execute the command `gcloud list instances`
- B. Execute the command `gcloud compute instances list`
- C. Execute the command `gcloud compute list`
- D. Execute the command `gcloud instances list`

Answer: B

NEW QUESTION # 287

You need to provide a cost estimate for a Kubernetes cluster using the GCP pricing calculator for Kubernetes.

Your workload requires high IOPs, and you will also be using disk snapshots. You start by entering the number of nodes, average hours, and average days. What should you do next?

- A. Select Add GPUs. Fill in persistent disk storage and snapshot storage.
- B. Fill in local SSD. Add estimated cost for cluster management.
- C. Select Add GPUs. Add estimated cost for cluster management.
- D. Fill in local SSD. Fill in persistent disk storage and snapshot storage.

Answer: D

Explanation:

NEW QUESTION # 288

You are building an archival solution for your data warehouse and have selected Cloud Storage to archive your data. Your users need to be able to access this archived data once a quarter for some regulatory requirements. You want to select a cost-efficient option. Which storage option should you use?

- A. Cold Storage
- B. Nearline Storage
- C. Multi-Regional Storage
- D. Regional Storage

Answer: A

Explanation:

Nearline, Coldline, and Archive offer ultra low-cost, highly-durable, highly available archival storage. For data accessed less than once a year, Archive is a cost-effective storage option for long-term preservation of data.

Coldline is also ideal for cold storage-data your business expects to touch less than once a quarter. For warmer storage, choose Nearline: data you expect to access less than once a month, but possibly multiple times throughout the year. All storage classes are available across all GCP regions and provide unparalleled sub-second access speeds with a consistent API.
