

Pass Workday-Prism-Analytics Test | Latest Workday-Prism-Analytics Exam Fee

DOWNLOAD the newest Easy4Engine Workday-Prism-Analytics PDF dumps from Cloud Storage for free:
<https://drive.google.com/open?id=1Pg1fs7XCBFtGSOVMBqY6I6O1-LtT2dOz>

The Workday Workday-Prism-Analytics Certification is a valuable credential in the modern world. The Workday Workday-Prism-Analytics certification exam offers a great opportunity for beginners and experienced professionals to validate their skills and knowledge level. With the one certification Workday Pro Prism Analytics Exam exam you can upgrade your expertise and knowledge.

To choose the IT industry is to choose a high salary and a brighter future. And few people can resist the temptation. So, more and more people are interested in the certification exams. Workday Workday-Prism-Analytics Certification is growing popular among IT fields. Easy4Engine gives the candidates to provide the exam materials with best price and high quality practice tests. Our products are cost-effective and we will provide free updates for a year. Our certification training materials are available. We Easy4Engine is a leading supplier of answer's dumps providing with the most accurate training materials --- questions and answers.

Latest Pass Workday-Prism-Analytics Test offer you accurate Latest Exam Fee | Workday Pro Prism Analytics Exam

It is not easy for you to make a decision of choosing the Workday-Prism-Analytics study materials from our company, because there are a lot of study materials about the exam in the market. However, if you decide to buy the Workday-Prism-Analytics study materials from our company, we are going to tell you that it will be one of the best decisions you have made in recent years. As is known to us, the Workday-Prism-Analytics Study Materials from our company are designed by a lot of famous experts and professors in the field.

Workday Pro Prism Analytics Exam Sample Questions (Q44-Q49):

NEW QUESTION # 44

What is the primary purpose of window functions in Prism?

- A. To filter rows based on specified conditions.
- B. To provide row-level access control.
- **C. To perform calculations across a set of rows related to the current row while partitioning the data.**
- D. To manipulate strings and dates within a query.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Window functions in Workday Prism Analytics are a powerful feature used in dataset transformations to perform advanced calculations. According to the official Workday Prism Analytics study path documents, the primary purpose of window functions is to perform calculations across a set of rows related to the current row while partitioning the data. These functions allow users to compute values such as running totals, rankings, or aggregations (e.g., SUM, COUNT, RANK) within a defined "window" of rows, which can be partitioned by specific columns and ordered as needed. Window functions operate without collapsing the dataset (unlike group-by aggregations), preserving the original row structure while adding calculated results.

The other options do not describe the purpose of window functions:

A: To provide row-level access control: Row-level access control is managed through security domains and policies, not window functions.

B: To manipulate strings and dates within a query: String and date manipulations are handled by other functions (e.g., CONCAT, DATEADD), not window functions.

C: To filter rows based on specified conditions: Filtering is achieved using WHERE clauses or filter stages, not window functions. Window functions are essential for complex analytical calculations, such as ranking employees within a department or calculating cumulative totals, making them a key tool in Prism's data transformation capabilities.

NEW QUESTION # 45

You want to remove data within a Prism data source without deleting any dependent custom reports. What task can you use to do this?

- A. Delete Dataset
- B. Inactivate Dataset
- **C. Delete Published Rows**
- D. Unpublish Dataset

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, removing data from a Prism data source (PDS) without affecting dependent custom reports requires a careful approach to preserve the data source's structure and dependencies.

According to the official Workday Prism Analytics study path documents, the task to use is Delete Published Rows (option D). This task removes the data rows within the Prism data source while keeping the data source's metadata (e.g., field definitions) and structure intact. Since custom reports depend on the data source's structure rather than the specific data rows, deleting the published rows will not break the reports. After deleting the rows, you can republish the dataset with updated data, and the reports will continue to function with the new data, assuming the structure remains unchanged.

The other options are incorrect:

- * A. Inactivate Dataset: Inactivating a dataset disables it but does not remove data from the published data source, and it may still affect reports by making the data source inaccessible.
- * B. Delete Dataset: Deleting the dataset entirely will also delete the Prism data source, breaking any dependent custom reports.
- * C. Unpublish Dataset: Unpublishing the dataset removes the Prism data source, which will break dependent reports until the dataset is republished.

The Delete Published Rows task ensures that data is removed from the Prism data source without impacting the dependent custom reports, allowing for seamless data updates.

NEW QUESTION # 46

A Prism administrator wants to hide a field that contains employee salary information but still allow the Prism data writers to view average salaries for employees by cost center. What is the reason for hiding this field?

- A. To hide Prism-calculated fields used for interim processing.
- B. To hide unpopulated or sparse data fields.
- C. To use computed values instead of base values.
- D. To protect sensitive data.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, hiding a field is a common practice to control access to sensitive information while still allowing necessary analytics to be performed. According to the official Workday Prism Analytics study path documents, the primary reason for hiding a field like employee salary information is to protect sensitive data. Employee salary is considered personally identifiable information (PII) or sensitive data, and hiding the field ensures that individual salary details are not exposed to unauthorized users or in published data sources. However, by hiding the field, Prism data writers can still use it in calculations—such as computing the average salary by cost center—because hidden fields remain accessible for transformation and aggregation purposes within the dataset but are not visible in the final output or to end users of the published data source.

The other options do not align with the scenario:

- * B. To hide Prism-calculated fields used for interim processing: The salary field is a base field, not a calculated field used for interim processing, so this reason does not apply.
- * C. To hide unpopulated or sparse data fields: There is no indication that the salary field is unpopulated or sparse; the concern is about its sensitivity, not its data quality.
- * D. To use computed values instead of base values: Hiding the field does not inherently involve replacing it with computed values; the goal is to restrict visibility while still allowing computations like averages.

Hiding the salary field protects sensitive data while enabling aggregated analytics, aligning with Prism's security and governance capabilities.

NEW QUESTION # 47

You want to use a custom report containing prompts as a source connection for a table. What must you ensure to make this possible?

- A. The prompts are marked as required.
- B. The prompts are mapped at the data change task level.
- C. The custom report prompts have default values assigned on the report definition.
- D. The report is built on an indexed data source.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when using a custom report with prompts as a source connection for a table, the custom report must be configured to ensure compatibility with the Prism data ingestion process. According to the official Workday Prism Analytics study path documents, the key requirement is that the custom report prompts have default values assigned in the report definition. This is necessary because Prism Analytics does not support interactive prompting during data ingestion. Default values ensure that the report can run automatically without requiring user input, allowing the Data Change task to retrieve the data consistently and load it into the target table.

The other options are not correct in this context:

- * A. The report is built on an indexed data source: While indexed data sources can enhance performance for certain reports, they are not a requirement for using a custom report as a source for a Prism table.
- * B. The prompts are mapped at the data change task level: Prompts are not mapped in the Data Change task; instead, the task relies on the report's default values to execute the data retrieval.
- * D. The prompts are marked as required: Marking prompts as required does not address the need for automatic execution; default

values are still needed to avoid manual intervention.

By assigning default values to prompts in the custom report definition, the report can be seamlessly integrated as a source connection for Prism Analytics, ensuring reliable data loading into the table.

NEW QUESTION # 48

What security domain enables the ability to create a dataset?

- A. Prism Datasets: Create
- B. Prism: Tables Create
- C. Prism Datasets: Publish
- D. Prism: Manage Data Source

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, the ability to create a dataset is governed by specific security domains within the Prism Analytics functional area. According to the official Workday Prism Analytics study path documents, the security domain that explicitly enables users to create datasets is the "Prism Datasets: Create" domain.

This domain grants users the necessary permissions to initiate the creation of both base and derived datasets within the Prism Analytics Data Catalog.

The process of creating a dataset involves defining the metadata and processing logic to manipulate data, which can include Workday or external (non-Workday) data sources. The "Prism Datasets: Create" domain ensures that only authorized users, such as Prism data analysts or administrators, can perform this task, aligning with Workday's configurable security framework. Other domains, such as "Prism Datasets: Publish," are responsible for publishing datasets to make them available as Prism Data Sources for reporting, while

"Prism: Manage Data Source" pertains to managing the data sources themselves, not creating datasets.

Similarly, "Prism: Tables Create" is related to creating tables, which is a distinct entity from datasets in Prism Analytics.

This distinction is critical, as datasets and tables serve different purposes in the data management workflow.

Datasets include metadata and a subset of example rows, while tables contain metadata and all data rows. The "Prism Datasets: Create" domain is specifically designed to control access to dataset creation, ensuring secure and governed data preparation.
