

# Exam Topics NetSec-Pro Pdf - NetSec-Pro Exam Engine

DOWNLOAD the newest PracticeMaterial NetSec-Pro PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1Wh39qSb59WHoKvVgIKdXuKRNDt3unU4J>

It is estimated conservatively that the passing rate of the exam is over 98 percent with our NetSec-Pro study materials as well as considerate services. We not only provide all candidates with high pass rate study materials, but also provide them with good service. The thoughtfulness of our NetSec-Pro Study Materials services is insuperable. What we do surly contribute to the success of NetSec-Pro practice materials.

## Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>NGFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Infrastructure Management and CDSS: This section tests the abilities of security operations specialists and infrastructure managers in maintaining and configuring Cloud-Delivered Security Services (CDSS) including security policies, profiles, and updates. It includes managing IoT security with device IDs and monitoring, as well as Enterprise Data Loss Prevention and SaaS Security focusing on data encryption, access control, and logging. It also covers maintenance and configuration of Strata Cloud Manager and Panorama for network security environments including supported products, device addition, reporting, and configuration management.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.</li> </ul>

## Palo Alto Networks NetSec-Pro Exam Engine & NetSec-Pro Exam Tutorial

No matter the worker generation or students, they are busy in dealing with other affairs, so spending much time on a NetSec-Pro exam may make a disturb between their work and life. However if you buy our NetSec-Pro exam engine, you just only need to spend 20-30 hours to practice training material and then you can feel secure to participate in this exam. We can make sure the short time on NetSec-Pro training engine is enough for you to achieve the most outstanding result.

## Palo Alto Networks Network Security Professional Sample Questions (Q27-Q32):

### NEW QUESTION # 27

In a distributed enterprise implementing Prisma SD-WAN, which configuration element should be implemented first to ensure optimal traffic flow between remote sites and headquarters?

- A. Enable split tunneling for all branch locations.
- B. Configure static routes between all the branch offices.
- C. Deploy redundant ION devices at each location.
- **D. Implement dynamic path selection using real-time performance metrics.**

**Answer: D**

Explanation:

Dynamic path selection is the foundation of SD-WAN, leveraging real-time performance data to dynamically route traffic over the best available path.

"Dynamic path selection continuously monitors performance metrics (loss, latency, jitter) and makes real-time routing decisions to ensure application SLAs are met across the WAN." (Source: Prisma SD-WAN Dynamic Path Selection) Establishing dynamic path selection first ensures the rest of the SD-WAN optimizations (e.g., failover, QoS) work effectively.

### NEW QUESTION # 28

How does Strata Logging Service help resolve ever-increasing log retention needs for a company using Prisma Access?

- A. It increases resilience due to decentralized collection and storage of logs.
- B. Log traffic using the licensed bandwidth purchased for Prisma Access reduces overhead.
- **C. It can scale to meet the capacity needs of new locations as business grows.**
- D. Automatic selection of physical data storage regions decreases adoption time.

**Answer: C**

Explanation:

The Strata Logging Service offers scalable log storage to accommodate data growth, which ensures organizations can retain logs for compliance and threat hunting as their environments expand.

"The Strata Logging Service is designed to scale dynamically to accommodate growing log retention needs, allowing enterprises to maintain comprehensive visibility as they expand their network footprint." (Source: Strata Logging Service Overview)

#### NEW QUESTION # 29

A network security engineer wants to forward Strata Logging Service data to tools used by the Security Operations Center (SOC) for further investigation. In which best practice step of Palo Alto Networks Zero Trust does this fit?

- A. Standards and Designs
- B. Map and Verify Transactions
- C. Implementation
- **D. Report and Maintenance**

**Answer: D**

Explanation:

The "Report and Maintenance" step of the Zero Trust model emphasizes ongoing monitoring, analysis, and reporting to ensure the environment remains secure over time.

"The Report and Maintenance phase includes continuous monitoring, log forwarding, and sharing of security telemetry to third-party tools to maintain and validate Zero Trust implementation." (Source: Zero Trust Best Practices) By forwarding logs to SOC tools, the engineer ensures comprehensive visibility and proactive threat hunting.

#### NEW QUESTION # 30

Which two security services are required for configuration of NGFW Security policies to protect against malicious and misconfigured domains? (Choose two.)

- **A. Advanced DNS Security**
- **B. Advanced Threat Prevention**
- C. SaaS Security
- D. Advanced WildFire

**Answer: A,B**

Explanation:

Protecting against malicious and misconfigured domains requires two critical services:

Advanced Threat Prevention

Provides signature-based and advanced analysis to identify threats, including DNS-based attacks.

"Advanced Threat Prevention enables the NGFW to detect and prevent exploits and malware-based communications, including those leveraging DNS." (Source: Advanced Threat Prevention) Advanced DNS Security Specifically designed to detect and sinkhole malicious and misconfigured DNS queries.

"DNS Security uses real-time intelligence to block DNS-based threats, protect against data exfiltration, and automatically sinkhole suspicious domain lookups." (Source: DNS Security) By combining these services in security policies, NGFWs ensure robust protection against domain-based threats and misconfigurations.

#### NEW QUESTION # 31

Which GlobalProtect configuration is recommended for granular security enforcement of remote user device posture?

- **A. Configuring host information profile (HIP) checks for all mobile users**
- B. Configuring a rule that blocks the ability of users to disable GlobalProtect while accessing internal applications
- C. Implementing multi-factor authentication (MFA) for all users attempting to access internal applications
- D. Applying log at session end to all GlobalProtect Security policies

**Answer: A**

Explanation:

Host Information Profile (HIP) checks are used in GlobalProtect to collect and evaluate endpoint posture (OS, patch level, AV status) to enforce granular security policies for remote users.

"The HIP feature collects information about the host and can be used in security policies to enforce posture-based access control. This ensures only compliant endpoints can access sensitive resources." (Source: GlobalProtect HIP Checks) This enables fine-grained, context-aware access decisions beyond user identity alone.
