Free PDF 2026 Salesforce Accurate Salesforce-MuleSoft-Developer-I: Salesforce Certified MuleSoft Developer (Mule-Dev-201) Pass4sure Pass Guide

Frankly speaking, it is a common phenomenon that we cannot dare to have a try for something that we have little knowledge of or we never use. When it comes to our Salesforce-MuleSoft-Developer-I learning braindumps, you don't need to be afraid of that since we will provide free demo for you before you decide to purchase them. In doing so, you never worry to waste your time or money and have a free trial of our Salesforce-MuleSoft-Developer-I Exam Engine to know more and then you can choose whether buy Salesforce-MuleSoft-Developer-I study material or not.

Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q129-Q134):

NEW QUESTION # 129

Where are values of query parameters stored in the Mule event by the HTTP Listener?

- A. Inbound Properties
- B. Variables
- C. Payload

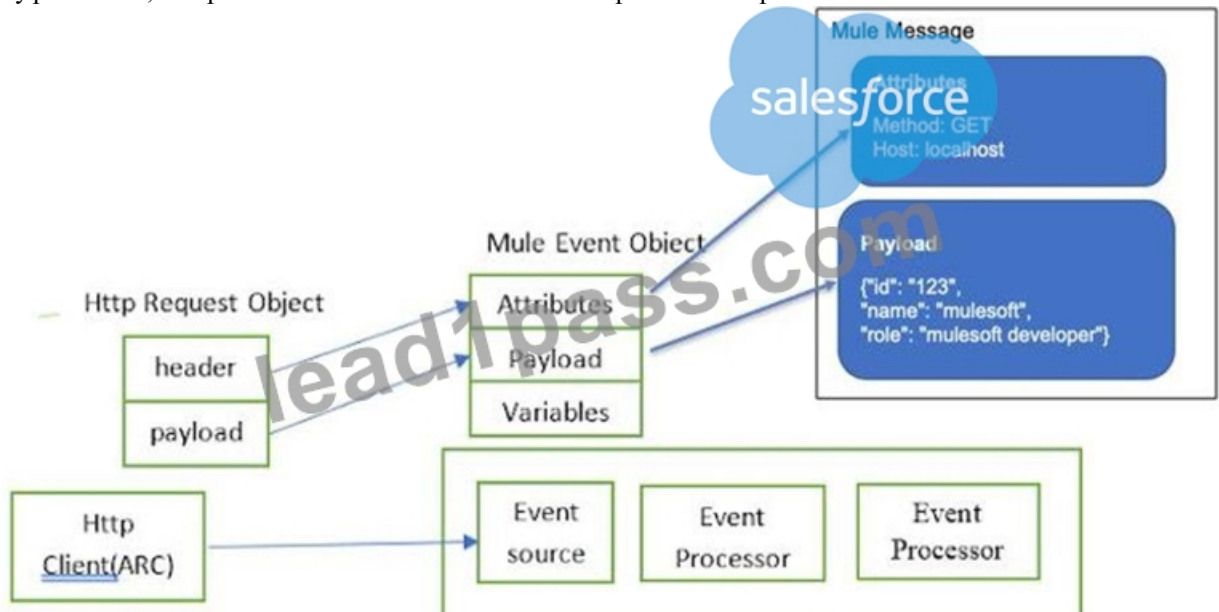

- D. Attributes

Answer: D

Explanation:

Correct answer is Attributes.

Query parameters , URI parameters and headers are some of examples which are part of attributes.

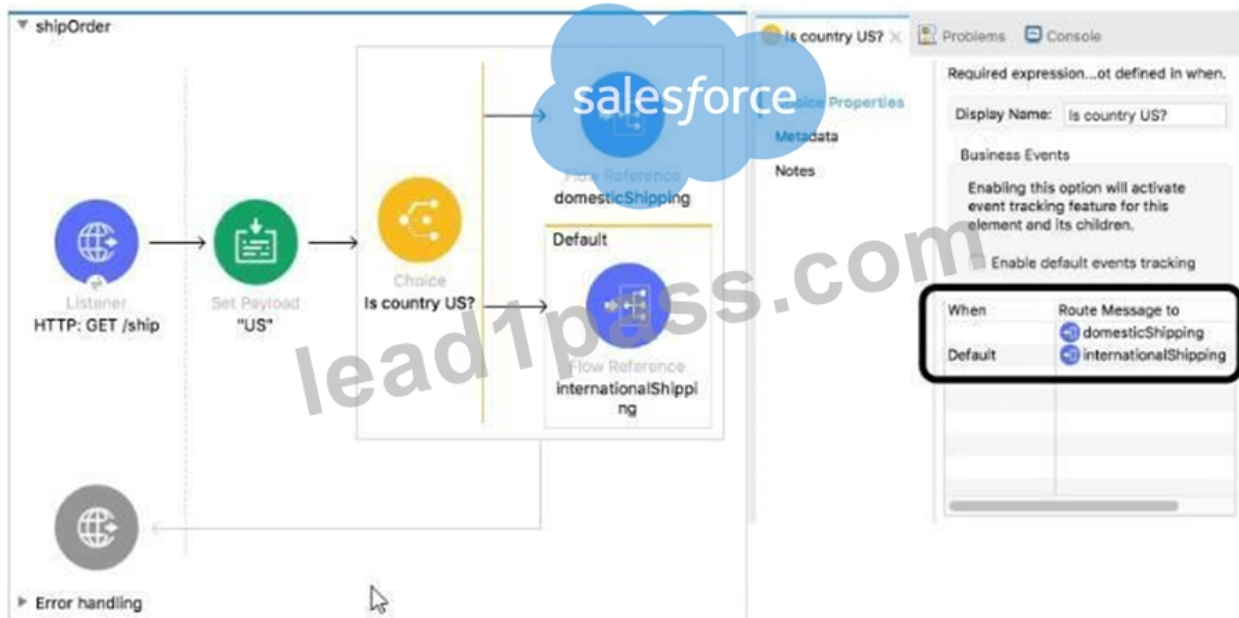

Bottom of Form

Top of Form

NEW QUESTION # 130

Refer to the exhibit.

What is a valid expression for the Choice router's when expression to route events to the domesticShipping flow?

- A. `#[payload = 'US']`
- B. `#[payload == 'US']`
- C. `#[if(payload = 'US')]`
- D. `#[if(payload == 'US')]`

Answer: B

Explanation:

Choice Router

The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most programming languages.

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes.

Properties of <when>

Property Description

Expression (expression)

Expression in DataWeave language to evaluate input. If the expression evaluates to true, this routing option is used:

* <when expression="#[vars.language == 'Spanish']">

Mulesoft Doc Ref: <https://docs.mulesoft.com/mule-runtime/4.3/choice-router-concept> With respect to above information, Option 1 is the correct syntax as others are incorrect because of below reasons

* Single = is not the correct syntax to validate the condition. It should be ==

* If keyword is not required in when condition.

NEW QUESTION # 131

A Utility.dwl is located in a Mule project at src/main/resources/modules. The Utility.dwl file defines a function named encryptString that encrypts a String. What is the correct DataWeave to call the encryptString function in a Transform Message component?

- A. 1. %dw 2.0. output application/json. import modules.Utility. ---5. encryptString("John Smith")
- B. 1. %dw 2.0. output application/json. import modules.Utility. ---5. Utility.encryptString("John Smith")
- C. 1. %dw 2.0. output application/json. import modules::Utility. ---5. Utility::encryptString("John Smith")
- D. 1. %dw 2.0. output application/json. import modules::Utility. ---5. encryptString("John Smith")

Answer: D

Explanation:

Correct answer is

```
%dw 2.0
```

```
output application/json
```

```
import modules::Utility
```

```
---
```

```
Utility::encryptString( "John Smith" )
```

DataWeave 2.0 functions are packaged in modules. Before you begin, note that DataWeave 2.0 is for Mule

4 apps. For Mule 3 apps, refer to DataWeave Operators in the Mule 3.9 documentation. For other Mule versions, you can use the version selector for the Mule Runtime table of contents.

Functions in the Core (dw::Core) module are imported automatically into your DataWeave scripts. To use other modules, you need to import the module or functions you want to use by adding the import directive to the head of your DataWeave script, for example:

```
import dw::core::Strings
```

```
import camelize, capitalize from dw::core::Strings
```

```
import * from dw::core::Strings
```

The way you import a module impacts the way you need to call its functions from a DataWeave script. If the directive does not list specific functions to import or use * from to import all functions from a function module, you need to specify the module when you call the function from your script. For example, this import directive does not identify any functions to import from the String module, so it calls the pluralize function like this: Strings::pluralize("box").

Transform

```
%dw 2.0
```

```
import dw::core::Strings
```

```
output application/json
```

```
---
```

```
{ 'plural': Strings::pluralize("box") }
```

NEW QUESTION # 132

What is the trait name you would use for specifying client credentials in RAML?

- A. cannot be specified in RAML
- B. client-id

- C. headers
- D. client-id-required

Answer: D

Explanation:

client-id-required enforces clients to add client_id and client_secret.

Please refer to below steps.

Add a section called traits: at the root level to define query parameters:

traits:

- client-id-required:

queryParameters:

client_id:

type: string

client_secret:

type: string

2) Reference the trait in each of the methods to specify that each of the methods require these query parameters. After each method in the RAML file, add is: [client-id-required]. For example:

/users:

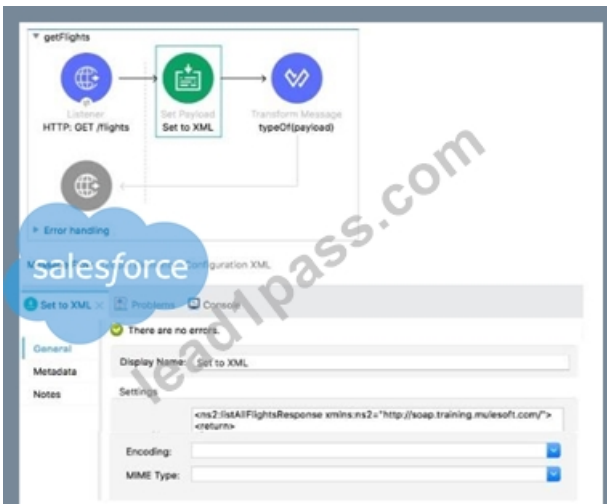

get:

is: [client-id-required]

description: Gets a list of JSONPlaceholder users.

NEW QUESTION # 133

Refer to the exhibits.

```

<flow name="getFlights" >
  <http:listener doc:name="HTTP: GET /flights" config-ref="HTTP_Listener_config" path="/flights" />
  <set-payload value='&lt;ns2:listAllFlightsResponse xmlns:ns2="http://soap.training.mulesoft.com/">
    &lt;return&gt;
      &lt;return&gt;
        &lt;return&gt;
          &lt;return&gt;
            &lt;return&gt;
              &lt;return&gt;
                &lt;return&gt;
              &lt;/return&gt;
            &lt;/return&gt;
          &lt;/return&gt;
        &lt;/return&gt;
      &lt;/return&gt;
    &lt;/ns2:listAllFlightsResponse&gt;' doc:name="Set to XML" />
  <ee:transform doc:name="typeOf(payload)" doc:id="43898508-15e2-4cb7-8d0b-bd9c2929209e" >
    <ee:message><ee:set-payload ><![CDATA[
      output application/json
      ---
      typeOf(payload)]]></ee:set-payload>
    </ee:message>
  </ee:transform>
</flow>

```

A web client submits a request to http://localhost:8081 /flights. What is the result at the end of the flow?

- A. "string"
- B. "Java"
- C. "object"

- D. "XML"

Answer: A

NEW QUESTION # 134

.....

Lead1Pass provides you with Salesforce Salesforce-MuleSoft-Developer-I exam questions in 3 different formats to open up your study options and suit your preparation tempo. The Salesforce Salesforce-MuleSoft-Developer-I PDF is the most convenient format to go through all exam questions easily. It is a compilation of actual Salesforce Salesforce-MuleSoft-Developer-I exam questions and answers.
