

Free Professional-Cloud-Developer Braindumps | Professional-Cloud-Developer Exam Simulator Free

What's more, part of that Test4Cram Professional-Cloud-Developer dumps now are free: https://drive.google.com/open?id=1b_EX6MDIV_lAxjQumEnHx33780V3q2fZ

The contents of Professional-Cloud-Developer test questions are compiled strictly according to the content of the exam. The purpose of our preparation of our study materials is to allow the students to pass the exam smoothly. Professional-Cloud-Developer test questions are not only targeted but also very comprehensive. Although experts simplify the contents of the textbook to a great extent in order to make it easier for students to learn, there is no doubt that Professional-Cloud-Developer Exam Guide must include all the contents that the examination may involve. We also hired a dedicated staff to constantly update Professional-Cloud-Developer exam torrent. With Professional-Cloud-Developer exam guide, you do not need to spend money on buying any other materials. During your preparation, Professional-Cloud-Developer exam torrent will accompany you to the end.

Target Audience and Prerequisites

The Google Professional Cloud Developer certification exam is intended for those App Developers who are involved in designing and building applications to run on Google Cloud Platform. These specialists should be familiar with the Google Cloud Platform products, such as Cloud Storage, Compute Engine, Security Key Enforcement, as well as BigQuery.

There are no obligatory requirements that the candidates need to meet to become eligible for the qualifying test. Nevertheless, the target individuals are recommended to have three or more years of industry experience, including one or more years of experience in designing and managing solutions using Google Cloud. Besides that, the students need to develop a comprehensive understanding of the exam topics.

Building & Testing Apps

- Building: It covers the skills in managing source control, improving and reviewing continuous efficiency in the integration pipeline, as well as creating different secure container images through code.
- Write Efficient Code: The potential candidates should understand algorithm design, software development methodologies, modern app patterns, and debugging & profiling code.
- Testing: Here, an applicant needs to have the skills in unit testing, performance testing, integration testing, and load testing.
- Set up a Local Development Environment: This subsection measures your skills in creating different Google Cloud projects, using developing tools and command-line interfaces, Cloud Shell tools, and Google Cloud Console, as well as imitating Google Cloud services for the development of the local application.

Google Professional Cloud Developer Certified Professional salary

The average salary of a Google Professional Cloud Developer Certified Expert in

- England - 135,632 POUND
- United State - 181,247 USD
- India - 27,42,327 INR
- Europe - 145,347 EURO

Quiz Google Professional-Cloud-Developer Marvelous Free Braindumps

We assume all the responsibilities that our practice materials may bring. They are a bunch of courteous staff waiting for offering help 24/7. You can definitely contact them when getting any questions related with our Professional-Cloud-Developer practice materials. If you haplessly fail the exam, we treat it as our responsibility then give you full refund and get other version of practice material for free. That is why we win a great deal of customers around the world. Especially for those time-sensitive and busy candidates, all three versions of Professional-Cloud-Developer practice materials can be chosen based on your preference. Such as app version, you can learn it using your phone everywhere without the limitation of place or time.

Google Certified Professional - Cloud Developer Sample Questions (Q311-Q316):

NEW QUESTION # 311

You need to configure a Deployment on Google Kubernetes Engine (GKE). You want to include a check that verifies that the containers can connect to the database. If the Pod is failing to connect, you want a script on the container to run to complete a graceful shutdown. How should you configure the Deployment?

- A. Create the Deployment with an initContainer that checks the service availability. Configure a PreStop lifecycle handler that runs the shutdown script if the Pod is failing.
- B. Create two jobs: one that checks whether the container can connect to the database, and another that runs the shutdown script if the Pod is failing.
- C. Create the Deployment with a livenessProbe for the container that will fail if the container can't connect to the database. Configure a PreStop lifecycle handler that runs the shutdown script if the container is failing.
- D. Create the Deployment with a PostStart lifecycle handler that checks the service availability. Configure a PreStop lifecycle handler that runs the shutdown script if the container is failing.

Answer: C

Explanation:

<https://cloud.google.com/architecture/best-practices-for-running-cost-effective-kubernetes-applications-on-gke#m>

NEW QUESTION # 312

Your team is developing a Cloud Function triggered by Cloud Storage Events. You want to accelerate testing and development of your Cloud Function while following Google-recommended best practices. What should you do?

- A. Create a new Cloud Function that is triggered when Cloud Audit Logs detects the cloudfunctions. functions. sourceCodeSet operation in the original Cloud Function Send mock
- B. Make a copy of the Cloud Function, and rewrite the code to be HTTP-triggered Edit and test the new version by triggering the HTTP endpoint. Send mock requests to the new function to evaluate the functionality.
- C. Install the Functions Frameworks library, and configure the Cloud Function on localhost. Make a copy of the function, and make edits to the new version Test the new version using curl.
- D. Make a copy of the Cloud Function in the Google Cloud Console Use the Cloud console's in-line editor to make source code changes to the new function Modify your web application to call the new function and test the new version in production.

Answer: C

Explanation:

requests to the new function to evaluate the functionality.

NEW QUESTION # 313

You are developing a microservice-based application that will run on Google Kubernetes Engine (GKE). Some of the services need to access different Google Cloud APIs. How should you set up authentication of these services in the cluster following Google-recommended best practices? (Choose two.)

- A. Access the Google service account keys from a secret management service.
- **B. Enable Workload Identity in the cluster via the gcloud command-line tool.**
- **C. Use gcloud to bind the Kubernetes service account and the Google service account using roles/iam.workloadIdentity.**
- D. Use the service account attached to the GKE node.
- E. Store the Google service account keys in a central secret management service.

Answer: B,C

Explanation:

Explanation

<https://cloud.google.com/kubernetes-engine/docs/how-to/workload-identity>

NEW QUESTION # 314

Your company's corporate policy states that there must be a copyright comment at the very beginning of all source files. You want to write a custom step in Cloud Build that is triggered by each source commit. You need the trigger to validate that the source contains a copyright and add one for subsequent steps if not there.

What should you do?

- A. Build a new Docker container that examines the files in a Cloud Storage bucket and then checks and adds a copyright for each source file. Changed files are explicitly committed back to the source repository.
- B. Build a new Docker container that examines the files in a Cloud Storage bucket and then checks and adds a copyright for each source file. Changed files are written back to the Cloud Storage bucket.
- **C. Build a new Docker container that examines the files in /workspace and then checks and adds a copyright for each source file. Changed files are explicitly committed back to the source repository.**
- D. Build a new Docker container that examines the files in /workspace and then checks and adds a copyright for each source file. Changed files do not need to be committed back to the source repository.

Answer: C

Explanation:

https://cloud.google.com/build/docs/configuring-builds/pass-data-between-steps#passing_data_using_workspace To pass data between build steps, store the assets produced by the build step in /workspace and these assets will be available to any subsequent build steps.

NEW QUESTION # 315

You want to create 'fully baked' or 'golden' Compute Engine images for your application. You need to bootstrap your application to connect to the appropriate database according to the environment the application is running on (test, staging, production). What should you do?

- A. Embed the appropriate database connection string in the image. Create a different image for each environment.
- **B. When creating the Compute Engine instance, create a metadata item with a key of "DATABASE" and a value for the appropriate database connection string. In your application, query the metadata server for the "DATABASE" value, and use the value to connect to the appropriate database.**
- C. When creating the Compute Engine instance, create a metadata item with a key of "DATABASE" and a value for the appropriate database connection string. In your application, read the "DATABASE" environment variable, and use the value to connect to the appropriate database.
- D. When creating the Compute Engine instance, add a tag with the name of the database to be connected. In your application, query the Compute Engine API to pull the tags for the current instance, and use the tag to construct the appropriate database connection string.

Answer: B

Explanation:

<https://cloud.google.com/compute/docs/metadata/querying-metadata>
