

# 100% Pass Quiz 2026 312-50v13: Certified Ethical Hacker Exam (CEHv13)–High Pass-Rate Exam Simulator Fee

P.S. Free & New 312-50v13 dumps are available on Google Drive shared by Exam4PDF: <https://drive.google.com/open?id=1gPZbiVHMYF8bdPPPrDCAGN-xHXPc7OQ>

In real life, every great career must have the confidence to take the first step. When you suspect your level of knowledge, and cramming before the exam, do you think of how to pass the ECCouncil 312-50v13 exam with confidence? Do not worry, Exam4PDF is the only provider of training materials that can help you to pass the exam. Our training materials, including questions and answers, the pass rate can reach 100%. With Exam4PDF ECCouncil 312-50v13 Exam Training materials, you can begin your first step forward. When you get the certification of ECCouncil 312-50v13 exam, the glorious period of your career will start.

After cracking the Certified Ethical Hacker Exam (CEHv13) (312-50v13) exam you will receive the credential badge. It will pave your way toward well-paying jobs or promotions in any reputed tech company. At Exam4PDF have customizable Certified Ethical Hacker Exam (CEHv13) (312-50v13) practice exams for the students to review and improve their preparation. The Certified Ethical Hacker Exam (CEHv13) (312-50v13) practice test material product of Exam4PDF are created by experts with the dedication to help customers crack the Certified Ethical Hacker Exam (CEHv13) (312-50v13) exam on the first attempt.

## 312-50v13 Latest Materials | High 312-50v13 Quality

The 312-50v13 online exam simulator is the best way to prepare for the 312-50v13 exam. Exam4PDF has a huge selection of 312-50v13 dumps and topics that you can choose from. The ECCouncil Exam Questions are categorized into specific areas, letting you focus on the 312-50v13 subject areas you need to work on. Additionally, ECCouncil 312-50v13 exam dumps are constantly updated with new 312-50v13 questions to ensure you're always prepared for 312-50v13 exam.

## ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q720-Q725):

### NEW QUESTION # 720

While performing an Nmap scan against a host, Paola determines the existence of a firewall. In an attempt to determine whether the firewall is stateful or stateless, which of the following options would be best to use?

- A. -sA
- B. -sF
- C. -sT
- D. -sX

## Answer: A

Explanation:

-sA (TCP ACK scan)

This scan is different than the others discussed so far in that it never determines open (or even open|filtered) ports. It is used to map out firewall rulesets, determining whether they are stateful or not and which ports are filtered.

The ACK scan probe packet has only the ACK flag set (unless you use --scanflags). When scanning unfiltered systems, open and closed ports will both return a RST packet. Nmap then labels them as unfiltered, meaning that they are reachable by the ACK packet, but whether they are open or closed is undetermined. Ports that don't respond, or send certain ICMP error messages back (type 3, code 0, 1, 2, 3, 9, 10, or 13), are labeled filtered.

<https://nmap.org/book/man-port-scanning-techniques.html>

## NEW QUESTION # 721

You are a Network Security Officer. You have two machines. The first machine (192.168.0.99) has Snort installed, and the second machine (192.168.0.150) has Kiwi Syslog installed. You perform a SYN scan in your network, and you notice that Kiwi Syslog is not receiving the alert message from Snort. You decide to run Wireshark on the Snort machine to check if the messages are going to the Kiwi Syslog machine. What Wireshark filter will show the connections from the Snort machine to Kiwi Syslog machine?

- A. `tcp.srcport==514 && ip.src==192.168.0.99`
- B. `tcp.srcport==514 && ip.src==192.168.150`
- C. `tcp.dstport==514 && ip.dst==192.168.0.150`
- D. `tcp.dstport==514 && ip.dst==192.168.0.99`

## Answer: C

Explanation:

Syslog messages are typically sent over UDP or TCP port 514 to the Syslog server. In this case, Snort (192.168.0.99) should send alerts to Kiwi Syslog (192.168.0.150) using TCP/UDP port 514.

The correct Wireshark filter to check if Snort is sending the messages to the Syslog server is:

`tcp.dstport==514 && ip.dst==192.168.0.150`

Reference - CEH v13 Official Study Guide:

Module 8: Sniffing

Topic: Packet Sniffing and Analysis

Quote:

"Wireshark filters like `tcp.dstport` and `ip.dst` can be used to verify outbound logs and traffic from intrusion detection systems."

Incorrect Options:

A & B: Use incorrect IP addresses or direction

C: Uses incorrect destination IP (should be the Syslog server)

## NEW QUESTION # 722

You need to deploy a new web-based software package for your organization. The package requires three separate servers and needs to be available on the Internet. What is the recommended architecture in terms of server placement?

- A. A web server and the database server facing the Internet, an application server on the internal network
- B. `A web server facing the Internet, an application server on the internal network, a database server on the internal network`
- C. All three servers need to be placed internally
- D. All three servers need to face the Internet so that they can communicate between themselves

## Answer: B

Explanation:

The recommended architecture for secure web application deployment is a multi-tiered setup:

Web server in the DMZ (public-facing)

Application server on the internal network

Database server on the internal network

This design limits the exposure of critical components. Only the web server is exposed to the internet, while application and database servers are shielded by firewalls and only accessible internally.

Reference - CEH v13 Official Study Guide:

Module 10: Hacking Web Servers

Quote:

"Place the web server in the DMZ and keep the application and database servers within the internal network. This reduces the attack surface and provides layered security."

Incorrect Options Explained:

- A). Internal placement makes them inaccessible externally.
- C & D. Exposing the database or all servers to the internet introduces significant risk.

#### NEW QUESTION # 723

What did the following commands determine?

□

- A. These commands demonstrate that the guest account has NOT been disabled
- B. Issued alone, these commands prove nothing
- C. These commands demonstrate that the guest account has been disabled
- D. That the Joe account has a SID of 500
- E. **That the true administrator is Joe**

**Answer: E**

#### NEW QUESTION # 724

Which among the following is the best example of the hacking concept called "clearing tracks"?

- A. During a cyberattack, a hacker injects a rootkit into a server.
- B. **During a cyberattack, a hacker corrupts the event logs on all machines.**
- C. After a system is breached, a hacker creates a backdoor to allow re-entry into a system.
- D. An attacker gains access to a server through an exploitable vulnerability.

**Answer: B**

Explanation:

"Clearing tracks" is a post-exploitation phase in the ethical hacking methodology in which the attacker removes or alters system evidence to hide their activities and avoid detection. This may include:

- \* Deleting or modifying event logs
- \* Clearing bash history or command history
- \* Removing malware traces
- \* Disabling auditing

From CEH v13:

\* Corrupting or erasing event logs ensures that system administrators or forensic investigators cannot trace the intrusion or determine how the system was compromised.

Incorrect Options:

- \* A. Creating a backdoor is part of the "Maintaining Access" phase, not "Clearing Tracks."
- \* B. Injecting a rootkit is part of the "Gaining or Maintaining Access" stage.
- \* C. Exploiting a vulnerability is part of the "Gaining Access" phase.

Reference - CEH v13 Official Courseware:

Module 05: System Hacking

Section: "Clearing Logs and Erasing Evidence"

Subsection: "Track-Clearing Techniques"

Lab: Log Manipulation and Covering Tracks
