SPLK-2003 New Dumps Ebook & Prep SPLK-2003 Guide

SPLK-2003 exam certification is very useful in your daily work in IT industry. When you decide to attend the SPLK-2003 exam test, it is not an easy thing at begin. First, you should have a detail study plan and have a basic knowledge of the SPLK-2003 actual test. Here, Splunk SPLK-2003 test pdf dumps are recommended to you for preparation. SPLK-2003 Pdf Torrent will tell you the basic question types in the actual test and give the explanations where is available. With the help of the SPLK-2003 vce dumps, you will be confident to attend the SPLK-2003 actual test and get your certification with ease.

Splunk Phantom Certified Admin Sample Questions (Q95-Q100):

NEW QUESTION # 95

Within the 12A2 design methodology, which of the following most accurately describes the last step?

- A. List of the apps used by the playbook.
- B. List of the actions of the playbook design.
- **C. List of the outputs of the playbook design.**
- D. List of the data needed to run the playbook.

Answer: C

Explanation:

Explanation

The correct answer is C because the last step of the 12A2 design methodology is to list the outputs of the playbook design. The outputs are the expected results or outcomes of the playbook execution, such as sending an email, creating a ticket, blocking an IP, etc. The outputs should be aligned with the objectives and goals of the playbook. See Splunk SOAR Certified Automation Developer for more details.

NEW QUESTION # 96

How can the DECIDED process be restarted?

- A. In Administration > Server Settings.
- B. By restarting the playbook daemon.
- **C. By restarting the automation service.**
- D. On the System Health page.

Answer: C

Explanation:

DECIDED process is a core component of the SOAR automation engine that handles the execution of playbooks and actions. The DECIDED process can be restarted by restarting the automation service, which can be done from the command line using the service phantom restart command. Restarting the automation service also restarts the playbook daemon, which is another core component of the SOAR automation engine that handles the loading and unloading of playbooks. Therefore, option D is the correct answer, as it restarts both the DECIDED process and the playbook daemon.

In Splunk SOAR, if the DECIDED process, which is responsible for playbook execution, needs to be restarted, this can typically be done by restarting the automation (or phantom) service. This service manages the automation processes, including playbook execution. Restarting it can reset the DECIDED process, resolving issues related to playbook execution or process hangs.

NEW QUESTION # 97

Which of the following are the steps required to complete a full backup of a Splunk Phantom deployment? Assume the commands are executed from /opt/phantom/bin and that no other backups have been made.

- A. On the command line enter: `rode sudo python ibackup.pyc --setup`, then `sudo phenv python ibackup.pyc --backup`.
- B. Within the UI: Select from the main menu Administration > System Health > Backup.
- **C. On the command line enter: `sudo phenv python ibackup.pyc --backup -backup-type full`, then `sudo phenv python ibackup.pyc --setup`.**
- D. Within the UI: Select from the main menu Administration > Product Settings > Backup.

Answer: C

Explanation:

Explanation

The correct answer is B because the steps required to complete a full backup of a Splunk Phantom deployment are to first run the `--backup --backup-type full` command and then run the `--setup` command.

The `--backup` command creates a backup file in the `/opt/phantom/backup` directory. The `--backup-type full` option specifies that the backup file includes all the data and configuration files of the Phantom server.

The `--setup` command creates a configuration file that contains the encryption key and other information needed to restore the backup file. See Splunk SOAR Certified Automation Developer Track for more details.

NEW QUESTION # 98

When configuring a Splunk asset for SOAR to connect to a Splunk Cloud instance, the user discovers that they need to be able to run two different on_poll searches. How is this possible?

- A. Configure the second query in the Splunk App for SOAR Export.
- B. Install a second Splunk app and configure the query in the second app.
- **C. Configure a second Splunk asset with the second query.**
- D. Enter the two queries in the asset as comma separated values.

Answer: C

Explanation:

In Splunk SOAR, when needing to run multiple on_poll searches to a Splunk Cloud instance, the recommended approach is to configure a second Splunk asset specifically for the second query.

This method allows each Splunk asset to maintain its own settings and query configurations, ensuring that each search can be managed and optimized independently. This separation also helps in troubleshooting and maintaining clarity in the configuration.

When configuring a Splunk asset for SOAR to connect to a Splunk Cloud instance and there is a need to run two different on_poll searches, the appropriate action is to configure a second Splunk asset with the second query. This allows each Splunk asset to have its own unique on_poll search configuration, enabling them to run independently and retrieve different sets of data as required. The other options, such as installing a second app or entering queries as comma-separated values, are not standard practices for managing multiple on_poll searches in Splunk SOAR.

NEW QUESTION # 99

When is using decision blocks most useful?

- A. When processing different data in parallel.
- B. When evaluating complex, multi-value results or artifacts.
- **C. When selecting one (or zero) possible paths in the playbook.**
- D. When modifying downstream data in one or more paths in the playbook.

Answer: C

Explanation:

Explanation

Decision blocks are most useful when selecting one (or zero) possible paths in the playbook. Decision blocks allow the user to define one or more conditions based on action results, artifacts, or custom expressions, and execute the corresponding path if the condition is met. If none of the conditions are met, the playbook execution ends. Decision blocks are not used for processing different data in parallel, evaluating complex, multi-value results or artifacts, or modifying downstream data in one or more paths in the playbook. Reference, page 15.

NEW QUESTION # 100

.....

First and foremost, we have high class operation system so we can assure you that you can start to prepare for the SPLK-2003 exam with our study materials only 5 to 10 minutes after payment. Second, once we have compiled a new version of the SPLK-2003 test question, we will send the latest version of our SPLK-2003 Training Materials to our customers for free during the whole year after purchasing. Last but not least, our worldwide after sale staffs will provide the most considerate after sale service for you in twenty four hours a day, seven days a week.
