## VMCE\_v12真題材料 - VMCE\_v12考題寶典

我們在工作中始終要牢記，擁有一份工作就要懂得感恩的道理，這樣，你一定會收穫很多。然而 Veeam 的 VMCE\_v12 考試是一科很難通過的考試，但是你也不用過分擔心。只要你利用了適當的方法，輕鬆地通過考試也不是不可能的。那麼你知道什麼是適當的方法嗎？使用 VMCE\_v12 的 VMCE\_v12 考試資料就是一種最好不過的方法。我們一直以來幫助了很多參加IT認定考試的考生，並且得到了大家的一致好評。

## 最新的 VMCE VMCE\_v12 免費考試真題 (Q87-Q92):

### 問題 #87

A company has backup issues because the Veeam Backup & Replication Configuration Database crashes, causing corruption to the configuration database. Sometimes the administrator has to recreate the backup jobs after a crash. The administrator needs to redesign the Veeam Backup & Replication solution to minimize issues with the configuration database. How should the administrator configure the Veeam Backup & Replication Configuration Database?

- A. Use a PostgreSQL cluster and back up using the configuration backup tool.
- B. Use Microsoft SQL Server installed directly on the Veeam Backup & Replication server and make hourly backups using application-aware processing.
- **C. Use a Microsoft SQL Always On Availability Group and back up using the configuration backup tool**
- D. Use PostgreSQL installed on a separate server and make hourly backups using application-aware processing.

答案： C

解題說明：

Always On Availability Group provides automatic failover and redundancy for the SQL instance hosting the Veeam DB, eliminating a single point of failure.

Configuration backup tool (the scheduled "Configuration Backup" job in Veeam) still runs against the AG listener, giving you point-in-time snapshots of the DB schema and metadata in case you need to restore to an earlier state.

#### 問題 #88

Which Veeam replication failover function ensures that changes made during a failover are copied to the original production VM?

- A. Permanent failover
- **B. Fallback**
- C. Undo failover
- D. Undo fallback

答案： B

解題說明：

In Veeam replication, the function that ensures changes made during a failover are copied back to the original production VM is Fallback. This process involves reversing the replication direction after a failover, ensuring that any changes made while running on the replica are synchronized back to the original VM.

#### 問題 #89

A customer wants to start an on-demand lab from backup files for several mission critical VMs.

What SureBackup feature should be configured to identify the necessary VMs?

- A. Virtual Lab
- **B. Application Group**
- C. Secure Restore
- D. Staged Restore

答案： B

解題說明：

When starting an on-demand lab from backup files for mission-critical VMs, the appropriate SureBackup feature to configure is A: Application Group. An Application Group in Veeam Backup & Replication is a predefined group of VMs that are started together in the SureBackup job. This feature is designed to ensure that interdependent VMs, such as those comprising a multi-tier application, are started in a sequence that respects their operational dependencies, allowing for comprehensive verification and testing. The Application Group can include the mission-critical VMs and any associated VMs required for the application environment to function correctly, ensuring that all components are available and interact as expected within the isolated on-demand lab environment. This setup facilitates effective testing or troubleshooting in a manner that closely mirrors the production environment without impacting live operations.

#### 問題 #90

For Veeam agent backup jobs, what feature is only available with Veeam Agent for Microsoft Windows?

- A. File-level backup
- **B. Backup from storage snapshots**
- C. Application-aware processing of
- D. Volume backup

答案： B

解題說明：

You can use Veeam Backup & Replication and Veeam Agent for Microsoft Windows operating in the managed mode (within the Veeam Agent management scenario) to create backups from native storage snapshots.

Native storage snapshots allow the following:

Veeam Backup & Replication to use backup proxy servers to process storage systems.

Veeam Agent to use hardware Volume Shadow Copy Service (VSS) provider and capabilities of native snapshots that are created on production storage systems to create backups.

問題 #91

What is the primary benefit of configuring replica seeding?

- A. Reduced WAN traffic
- B. Encrypted WAN traffic
- C. Compressed WAN traffic
- D. Deduplicated WAN traffic

答案： A

解題說明：

The primary benefit of configuring replica seeding in Veeam Backup & Replication is reduced WAN traffic.

Replica seeding allows for the initial replica to be created using a backup copy that is transported to the DR site, which significantly reduces the amount of data that needs to be transferred over the WAN during the initial replication process.
