It is convenient for our consumers to check Salesforce Order-Management-Administrator Exam Questions free of charge before purchasing the Salesforce Order-Management-Administrator practice exam.

Salesforce Order-Management-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.
Topic 2	<ul style="list-style-type: none">• User Experience and Customization: This section emphasizes leveraging Salesforce's Lightning UI to enhance user experiences. The Salesforce Order Management Administrator Consultant will customize experiences for users and managers through tools like the Lightning Page Editor, Report Builder, and out-of-the-box components. Success in this area ensures optimized workflows and improved operational efficiency.
Topic 3	<ul style="list-style-type: none">• Order Management Basics: In this topic, the Salesforce Order Management Administrator Consultant learns to position Order Management effectively within Salesforce's core architecture. By articulating the extensible platform capabilities, the ability to integrate with third-party systems, and the overall value proposition, this knowledge helps highlight Order Management's seamless adaptability and efficiency. These insights are crucial for demonstrating business value during client engagements.
Topic 4	<ul style="list-style-type: none">• Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.

Online Order-Management-Administrator Lab Simulation & Leader in Qualification Exams & Pass4sure Order-Management-Administrator Pass Guide

On one hand, you may learn the newest technologies in the field with our Order-Management-Administrator Study Guide to help you better adapt to your work, and on the other hand, you will pass the Order-Management-Administrator exam and achieve the certification which is the symbol of competence.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q26-Q31):

NEW QUESTION # 26

An administrator is creating a flow to manage order fulfillment. The administrator creates a fault path to handle a possible error. What object record should the administrator create in the fault path to notify users of an error?

- A. OrderError
- B. Fulfillment Error
- **C. Process Exception**
- D. Order Summary Exception

Answer: C

Explanation:

The object record that the administrator should create in the fault path to notify users of an error is Process Exception. A Process Exception is a record that represents an error or exception that occurred during the order lifecycle, such as payment authorization failure, inventory allocation failure, fulfillment location assignment failure, etc. A Process Exception has a lookup relationship to the Order object, and it contains information such as the exception type, status, message, etc. Verified

NEW QUESTION # 27

A company's service team should not see Process Exceptions on any Order Summaries. How can an administrator meet these requirements?

- A. Add a filter to the Process Exception component on the Order Summary lightning record page to hide the component for the service team's Profile
- B. Modify the service team profiles to remove access to the lightning component and all associated Apex classes
- **C. Create a copy of the Order Summary lightning record page for the service team and remove the Process Exceptions component. Activate the lightning record page by profile for all Service team profiles.**
- D. Modify the Order Summary page layout to remove visibility to the Process Exception component for Service team profiles

Answer: C

Explanation:

Explanation

The best way for the administrator to meet these requirements is to create a copy of the Order Summary lightning record page for the service team and remove the Process Exceptions component. Activate the lightning record page by profile for all Service team profiles. A Process Exception is a record that represents an error or exception that occurred during the order lifecycle, such as payment authorization failure, inventory allocation failure, fulfillment location assignment failure, etc. A Process Exception has a lookup relationship to the Order object, and it contains information such as the exception type, status, message, etc. The Process Exceptions component is a standard component that displays process exceptions related to an order on its record page. The administrator can use the Lightning App Builder to create a copy of the Order Summary lightning record page for the service team and remove the Process Exceptions component from the page layout. The administrator can then activate the lightning record page by profile for all Service team profiles, so that they do not see Process Exceptions on any Order Summaries. Verified References:

NEW QUESTION # 28

A developer needs to create a scheduled job in an external system to move Order data into a Salesforce org every 24 hours. In which two ways can this off-platform job be established without additional third-party tools?

- A. Set up an SFTP server as a waystation, drop the files there using the off-platform job and schedule a job in-platform to process the file
- B. Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data
- C. Authorize a machine against the Salesforce org's APIs with appropriate security measures and create a script to call the APIs
- D. Create a job in the org (on-platform) to drop a file of existing data. Use the off-platform machine to generate a file and identify the details between the two. Push the changes to the org's "Import" directory

Answer: B,C

Explanation:

Two ways that this off-platform job can be established without additional third-party tools are:

Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data. The CLI is a tool that allows developers to interact with Salesforce from the command line. The developer can use the CLI to create scripts that use commands such as `force:data:bulk:upsert` or `force:data:tree:import` to import data from CSV or JSON files into Salesforce.

Authorize a machine against the Salesforce org's APIs with appropriate security measures and create a script to call the APIs. The APIs are interfaces that allow developers to access data and functionality in Salesforce from external systems. The developer can use the APIs, such as REST API or Bulk API, to create a script that authenticates with Salesforce using OAuth 2.0 or JWT, and then performs operations such as insert, update, or delete on Order data.

NEW QUESTION # 29

How can an administrator add visibility rules for the buttons in the Highlights Panel on the Order Summary record page?

- A. Modify the visibility rules of the Highlights Panel Actions in the page layout
- B. Create a custom Highlights Panel component
- C. Navigate to the Order Summary object in Setup and modify the Highlights Panel visibility rules
- D. Modify the Lightning Record Page Highlights Panel using Dynamic Actions

Answer: D

Explanation:

Dynamic Actions allow an administrator to add visibility rules for the buttons in the Highlights Panel on the Lightning Record Page. Dynamic Actions let you configure when and where actions appear on a record page based on criteria such as record field values, user permissions, or device type.

NEW QUESTION # 30

A customer orders 10 products. The products must be shipped to three different locations. Two of the orders are fulfilled at the same location. How many Fulfillment Orders would be created for this order?

- A. One Fulfillment Order per Fulfillment Location, totaling 2
- B. One Fulfillment Order per destination, totaling 3
- C. One Fulfillment Order
- D. One Fulfillment Order per item in the order, totaling 10

Answer: B

Explanation:

The number of Fulfillment Orders that would be created for this order is one per destination, totaling 3. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc. The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. In this case, since the products must be shipped to three different locations, three Fulfillment Orders are created for each destination.
