Free PDF Quiz Huawei - H13-321_V2.5–Valid Latest Exam Answers

P.S. Free 2026 Huawei H13-321_V2.5 dumps are available on Google Drive shared by VCETorrent: https://drive.google.com/open?id=1GsvkTheJtv9EX8viRXvmXDXuf9JHxyc0

Now you can pass HCIP-AI-EI Developer V2.5 exam without going through any hassle. You can only focus on H13-321_V2.5 exam dumps provided by the VCETorrent, and you will be able to pass the HCIP-AI-EI Developer V2.5 test in the first attempt. We provide high quality and easy to understand H13-321_V2.5 pdf dumps with verified Huawei H13-321_V2.5 for all the professionals who are looking to pass the H13-321_V2.5 exam in the first attempt. The H13-321_V2.5 training material package includes latest H13-321_V2.5 PDF questions and practice test software that will help you to pass the H13-321_V2.5 exam.

As long as you buy our H13-321_V2.5 practice materials and take it seriously to your consideration, we can promise that you will pass your H13-321_V2.5 exam and get your certification in a short time. We can claim that if you study with our H13-321_V2.5 learning guide for 20 to 30 hours as praparation, then you can be confident to pass the exam. So choose our products to help you review, you will benefit a lot from our H13-321_V2.5 study guide.

Latest Huawei H13-321_V2.5 Braindumps Questions | H13-321_V2.5 Actual Exams

Our Huawei H13-321_V2.5 Online test engine is convenient and easy to learn, it supports all web browsers. If you want, you can have offline practice. One of the most outstanding features of HCIP-AI-EI Developer V2.5 H13-321_V2.5 Online test engine is it has testing history and performance review. You can have general review of what you have learnt. Besides, H13-321_V2.5 Exam Braindumps offer you free demo to have a try before buying.

Huawei HCIP-AI-EI Developer V2.5 Sample Questions (Q51-Q56):

NEW QUESTION # 51
When the chi-square test is used for feature selection, SelectKBest and _____ function or class must be imported from the sklearn.feature_selection module. (Enter the function interface name.) chi2 Explanation:
In feature selection for classification tasks, thechi-square (#²)statistical test can be applied to evaluate the independence between features and target labels.
In Python's scikit-learn library, this is implemented using:

Answer:

Explanation:
python
CopyEdit
from sklearn.feature_selection import SelectKBest, chi2
SelectKBest selects the top K features based on scores returned by the chi2 function.

Exact Extract from HCIP-AI EI Developer V2.5:
"In scikit-learn, SelectKBest with chi2 can be used for feature selection by scoring features according to the chi-square statistic."
Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Feature Selection Methods

NEW QUESTION # 52
Huawei Cloud ModelArts is a one-stop AI development platform that supports multiple AI scenarios. Which of the following scenarios are supported by ModelArts?

- A. Video analytics
- B. Image classification
- C. Object detection
- D. Speech recognition

Answer: A,B,C,D

Explanation:
ModelArts provides an integrated environment for data labeling, model training, deployment, and management, supporting various AI application scenarios:
* Image classificationfor categorizing visual content.
* Object detectionfor locating and identifying multiple objects in images or video frames.
* Speech recognitionfor converting speech to text.
* Video analyticsfor automated video content analysis.
Exact Extract from HCIP-AI EI Developer V2.5:
"ModelArts supports a wide range of AI tasks including image classification, object detection, speech recognition, and intelligent video analytics." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: ModelArts Overview

NEW QUESTION # 53
Overfitting is a condition where a model is overly simple and excessive generalization errors occur.

- A. TRUE
- B. FALSE

Answer: B

Explanation:
Overfitting occurs when a model learns the training data too well, including its noise and outliers, to the extent that it negatively impacts performance on unseen data. Contrary to the statement, overfitting is not caused by an "overly simple" model but typically by an overlycomplex modelwith too many parameters relative to the amount of training data. Such models have high variance and low bias, meaning they fit the training data perfectly but fail to generalize to new datasets. In the HCIP-AI EI Developer V2.5 curriculum, overfitting is described as a scenario where the model's complexity captures random fluctuations in training data instead of general patterns, leading to poor predictive performance.
Exact Extract from HCIP-AI EI Developer V2.5:
"Overfitting means that the trained model performs very well on the training dataset but poorly on new data.
It usually results from excessive model complexity, insufficient data, or lack of regularization." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Model Training Challenges

NEW QUESTION # 54
Which of the following has never been used as a method in the history of NLP?

- A. Statistics-based method
- B. Recursion-based method
- C. Deep learning-based method
- D. Rule-based method

Answer: B

Explanation:
Historically, NLP has evolved through three main methodological phases:

* Rule-based methods- used in early systems, relying on manually crafted grammar and lexicons.
* Statistics-based methods- introduced probabilistic models such as HMMs and n-grams.
* Deep learning-based methods- using neural networks, transformers, and embeddings.
A "recursion-based method" has never been recognized as a distinct NLP methodology, even though recursion can appear in linguistic theory, it is not a primary computational approach in NLP history.
Exact Extract from HCIP-AI EI Developer V2.5:
"The evolution of NLP includes rule-based, statistical, and deep learning-based methods. Recursion-based approaches are not considered a formal method in NLP development history." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: NLP Development History

NEW QUESTION # 55
Maximum likelihood estimation (MLE) can be used for parameter estimation in a Gaussian mixture model (GMM).

- A. FALSE
- B. TRUE

Answer: B

Explanation:
A Gaussian mixture model represents a probability distribution as a weighted sum of multiple Gaussian components.
TheMLEmethod can be applied to estimate the parameters of these components (means, variances, and mixing coefficients) by maximizing the likelihood of the observed data. The Expectation- Maximization (EM) algorithm is typically used to perform MLE in GMMs because it can handle hidden (latent) variables representing the component assignments.
Exact Extract from HCIP-AI EI Developer V2.5:
"MLE, implemented through the EM algorithm, is commonly used to estimate the parameters of Gaussian mixture models."
Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Gaussian Mixture Models
