Candidates must also be able to troubleshoot access network issues and implement network security measures, such as firewalls, VPNs, and access control lists. They must have a good understanding of network management principles and be able to use network management tools to monitor and optimize network performance.

Huawei HCIP-Access V2.5 Sample Questions (Q119-Q124):

NEW QUESTION # 119

When the DHCP Option 82 function is enabled globally and in the VLAN service profile and the port and service port allows the user-side DHCP packets to carry the Option 82 information, what is the processing policy if a user-side DHCP packet with Option 82 is received?

- A. The access device directly forwards the user-side DHCP packet without any processing.
- B. The access device strips the Option 82 information from the user-side DHCP packet and forwards the packet.
- C. The access device strips the Option 82 from the user-side DHCP packet and adds the local user information.
- **D. The access device discards the user-side DHCP packet.**

Answer: D

NEW QUESTION # 120

Which of the following VLAN planning methods can be used in POL networking?

- A. VLAN range division by geographic area
- B. VLAN range division by organization
- C. VLAN range division by logical zone
- **D. VLAN range division by service function**

Answer: D

NEW QUESTION # 121

(Multi-select) Use OTDR to locate the abnormally attenuated location in the optical path, and after the OTDR is connected to the detected line, which of the following parameters can be set.

- **A. Sets the pulse width**
- **B. Set the wavelength**
- **C. Set the measurement range**
- **D. Set the mode**

Answer: A,B,C,D

NEW QUESTION # 122

During troubleshooting, you can obtain multiple requests and response messages in a session by capturing packets. Which of the following options can be used to confirm the mapping between requests and response packets?

- **A. CSeq**
- B. Branch ID
- C. From
- D. Tag

Answer: A

Explanation:

In SIP message correlation, a response matches a request using the CSeq header (method and sequence number) together with the dialog identifiers (Call-ID, From/To with tags). Among the options, CSeq is the direct, standard field used to pair a specific request

References: HCIP-Access V2.5 (SIP message structure and troubleshooting; CSeq-based mapping of requests /responses).

What can cause erratic display in IPTV programs?

- A. Some key frames are lost during line transmission.
- B. Some key frames are lost during program compression.
- C. The receive or transmit optical power of the device is at a critical value.
- D. A rate limit is configured on the device.
