최신 HPE Technical HPE0-S59 무료샘플문제 (Q45-Q50):

질문 # 45

You plan to configure a Link Aggregation Group (LAG) for two connections within a server profile for a compute node running an ESXi system.

What is required from the VMware side to enable LAG?

- A. Load balancing cluster
- B. Dedicated VMKernel port
- C. vSphere Standard license
- D. Virtual Distributed Switch

정답: D

설명:

To configure a Link Aggregation Group (LAG) for two connections within a server profile for a compute node running an ESXi

system, a Virtual Distributed Switch (VDS) is required from the VMware side. VDS allows for the configuration of LAGs and provides advanced network features such as centralized management and monitoring, which are essential for setting up and managing LAGs.

질문 # 46

Your customer plans to deploy ESXi systems to HPE Synergy and HPE ProLiant servers using HPE OneView for VMware vCenter Server.

Which statement about HPE OneView for VMware vCenter Server functionality is true for this environment?

- A. Individual systems can be added to HPE OneView for VMware vCenter Server through an ILO management processor
- B. HPE Synergy requires HPE Composer 2 for full functionality of HPE OneView for VMware vCenter Server
- C. Only systems managed using HPE Oneview can use HPE Oneview for VMware vCenter Server functionalities
- D. HPE ProLiant servers need an HPE OneView for VMware vCenter Server license for full functionality

정답: C

설명:

HPE OneView for VMware vCenter Server integrates HPE OneView with VMware vCenter to provide centralized management of HPE infrastructure within VMware environments. However, it is essential to understand that HPE OneView for VMware vCenter can only manage systems that are already managed by HPE OneView.

This means that only systems that are part of an HPE OneView management environment can take full advantage of HPE OneView for VMware vCenter Server functionalities. These functionalities include integration with VMware vCenter for streamlined provisioning, monitoring, and management of HPE servers and storage.

질문 # 47

Your customer has an HPE Synergy platform deployed and managed using HPE OneView. The customer also has HPE Superdome Flex with RMC deployed. They plan to deploy a second nPar and HPE Superdome Flex

280. They plan to manage new components using HPE OneView.

What must be done to achieve this goal?

- A. The customer must add a second Rack Management Controller for HPE Superdome Flex 280
- B. The customer must use iLO5 to add HPE Superdome Flex systems to HPE OneView
- C. The customer should deploy an HPE OneView appliance for HPE Superdome Flex management
- D. The customer has to add HPE Superdome Flex to the HPE OneView used to manage HPE Synergy

정답: D

설명:

To manage HPE Superdome Flex systems, including the new Superdome Flex 280, using HPE OneView, the customer should deploy a dedicated HPE OneView appliance specifically for HPE Superdome Flex management. This approach ensures that the Superdome Flex systems are properly integrated and managed within the HPE OneView environment, allowing for consistent and centralized management alongside other HPE infrastructure.

질문 # 48

Which statement about a new HPE SimpliVity deployment is true?

- A. All new HPE SimpliVity models support deduplication and compression
- B. All new HPE SimpliVity models are based on AMD CPUs
- C. New HPE SimpliVity deployments give customer flexible choice of hypervisor
- D. New HPE SimpliVity deployments are licensed per node not per physical socket

정답: A

질문 # 49

Your customer has the following HPE Synergy setup:

- 15 HPE Synergy 12000 frames with 50Gb connectivity to each server

- 2 HPE Composer 2 modules
- 15 HPE D3940 Storage Modules, one per frame
- 2 HPE 12Gb SAS switches per frame

Which statement about this setup is true?

- 정답: A**

With 15 HPE Synergy 12000 frames, the customer must create multiple logical enclosures to manage the setup efficiently. HPE Synergy typically supports up to five frames per logical enclosure, meaning that at least five logical enclosures would be necessary to manage all 15 frames. This ensures proper organization, management, and scalability of the resources.
