Google-Workspace-Administrator Vce Exam, Exam Google-Workspace-Administrator Answers

Our experts are constantly looking for creative way to immortalize our Google-Workspace-Administrator actual exam in this line. Their masterpieces are instrumental to offer help and improve your performance in the real exam. Being dedicated to these practice materials painstakingly and pooling useful points into our Google-Workspace-Administrator Exam Materials with perfect arrangement and scientific compilation of messages, our Google-Workspace-Administrator practice materials can propel the exam candidates to practice with efficiency.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q62-Q67):

NEW QUESTION # 62
Your company has an OU that contains your sales team and an OU that contains your market research team. The sales team is often a target of mass email from legitimate senders, which is distracting to their job duties. The market research team also receives that email content, but they want it because it often contains interesting market analysis or competitive intelligence. Constant Contact is often used as the source of these messages. Your company also uses Constant Contact for your own mass email marketing. You need to set email controls at the Sales OU without affecting your own outgoing email or the market research OU.
What should you do?

- A. Create a blocked senders list at the Sales OU that contains the mass email sender addresses.
- B. Create a blocked senders list as the Sales OU that contains the mass email sender addresses, but bypass this setting for Constant Contact emails.
- C. Create an approved senders list at the Market Research OU that contains the mass email sender addresses.
- D. Create a blocked senders list at the root level, and then an approved senders list at the Market Research OU, both containing the mass email sender addresses.

Answer: B

Explanation:
Access Google Admin Console: Go to admin.google.com and sign in with your administrator account.
Navigate to Email Settings: In the Admin console, go to "Apps" > "Google Workspace" > "Gmail" > "Spam, Phishing, and Malware".
Select the Sales OU: Ensure you are configuring settings for the Sales OU specifically.
Create a Blocked Senders List:
Add Mass Email Sender Addresses: Enter the email addresses or domains of the mass email senders that the sales team finds distracting.
Bypass for Constant Contact: Create a rule to bypass this blocked senders list for emails coming from Constant Contact. This can usually be done by setting up an exception rule within the same settings area.
Apply and Save Settings: Ensure the settings are saved and propagated to the Sales OU.
Verify Configuration: Send test emails to confirm that the Sales OU is filtering unwanted mass emails while still receiving those from Constant Contact.

NEW QUESTION # 63
Your organization went Google?six months ago. Last week, a new feature appeared in users' Gmail, and your CTO was surprised because he did not know the change was happening. The CTO wants to be updated proactively about new features. What is the best source of real-time information to keep the CTO informed?

- A. Google Workspace Update blog
- B. Google Workspace quarterly roadmap
- C. Quarterly business reviews
- D. Cloud Connect Community forums

Answer: A

Explanation:

A is not correct because not all launch announcements are made in CCC forums.

B is not correct because roadmap calls provide customers with warnings about future features, but no solid dates are provided during the call.

C is not correct because QBRs are not typically used for these use cases.

D is correct because this is the source of truth for all new launches.

NEW QUESTION # 64

Your organization wants to ensure that all employees who use Chrome browsers for work adhere to specific security and configuration settings. You need to manage and control the Chrome browsers used within the company while using the least expensive solution. What should you do?

- A. Disable all extensions on employee Chrome browsers to prevent any potential security risks.
- B. Enroll the Chrome browsers in your organization's domain and apply Chrome browser policies.
- C. Remotely wipe all employee devices to ensure that they are using the latest Chrome browser version.
- D. Use a third-party software deployment solution to manage the Chrome browser.

Answer: B

Explanation:

Google Workspace (specifically Chrome Enterprise Core, which is often included or available for free with Google Workspace editions) provides built-in capabilities to manage Chrome browsers across an organization. By enrolling Chrome browsers in your domain, you can apply policies centrally from the Google Admin console, controlling security settings, extensions, updates, and more. This is a first-party, cloud-based solution that doesn't require additional software or licensing costs beyond your existing Google Workspace subscription, making it the "least expensive solution." Here's why the other options are less suitable for managing Chrome browsers with the least expense:

* A. Use a third-party software deployment solution to manage the Chrome browser. While possible, this would incur additional costs for the third-party software, its licensing, and potentially its maintenance. Google Workspace offers native browser management, so a third-party solution is not the

"least expensive."

* B. Remotely wipe all employee devices to ensure that they are using the latest Chrome browser version. Remotely wiping devices is a drastic and disruptive measure, typically used for lost/stolen devices or offboarding. It's not a standard or appropriate method for managing browser versions or applying configuration settings. It would also be highly expensive in terms of lost productivity and IT effort.

* D. Disable all extensions on employee Chrome browsers to prevent any potential security risks.

While disabling extensions can mitigate some risks, it's an overly broad and potentially disruptive action that could hinder employee productivity if legitimate and necessary extensions are disabled.

More importantly, it's just one potential policy you might apply, not the method for managing the browsers centrally and cost-effectively. Chrome browser policies allow for granular control, including allowing/blocking specific extensions.

References from Google Workspace Administrator:

* Set Chrome policies for users or browsers: This is the key administrative function that allows you to manage Chrome browsers. It describes how to apply policies to Chrome browsers enrolled in your organization's domain.

Reference: Chrome Enterprise and Education Help: Set Chrome policies for users or browsers Chrome Enterprise Core: This outlines the free cloud-based management features available for Chrome browsers, which are often integrated with Google Workspace. It explicitly states that "cloud-based management and reporting for $0" are available with Chrome Enterprise Core.

Maximizing Google Chrome Management in Google Workspace: This article further emphasizes that "the basic policies for Google Chrome management are available for free with Google Workspace." Reference: itGenius blog: Maximizing Google Chrome Management in Google Workspace By leveraging the built-in Chrome browser management capabilities within the Google Workspace Admin console, organizations can centrally control Chrome settings and security with no additional software cost, fitting the "least expensive solution" requirement.

NEW QUESTION # 65

Your global marketing team has over 500 employees. They recently started working with Google Analytics and want to move to managed accounts. You decide to use Google Cloud Directory Sync (GCDS) to sync users from your current identity provider. Your organization currently has no Google Workspace licenses linked to the Admin console. You run GCDS for the first time and

receive the following error, "Domain user limit reached." You need to identify and fix the problem.
What should you do?

- A. Check if GCDS has the correct permissions to run a sync on your domain.
- B. Update the delete limits of GCDS, and try again.
- C. Ensure that there is a subscription available and enough licenses to sync the new users.
- D. Wait 48 hours until the domain is fully provisioned.

Answer: C

Explanation:
The error "Domain user limit reached" indicates that there are not enough Google Workspace licenses available to accommodate the new users being synced by GCDS.

NEW QUESTION # 66
A user does not follow their usual sign-in pattern and signs in from an unusual location.
What type of alert is triggered by this event?

- A. Suspicious login activity alert.
- B. User sign-in alert.
- C. Suspicious mobile activity alert.
- D. Leaked password alert.

Answer: A

Explanation:
Identify Suspicious Login Activity:
Google Workspace triggers a suspicious login activity alert when a user signs in from an unusual location or device that is not part of their regular sign-in pattern.
Review Alerts:
Go to the Google Workspace Admin console.
Navigate to "Security" > "Dashboard" > "Suspicious login activity".
Review the details of the alert to determine the nature of the suspicious login.
Take Appropriate Actions:
Investigate the alert to ensure that the login attempt is legitimate.
If the login is deemed suspicious, follow security protocols to secure the user account, such as resetting the password or enabling two-factor authentication.
