問題 #117

You have created a subnet named subnetace1 with 16,382 addresses using 192.168.0.0. Later you realize that you won't require too many addresses, and so you want to reduce addresses to

254. Which of the following command would you use?

- A. `gcloud compute networks subnets expand-ip-range subnetace1 --size=248`
- B. `gcloud compute networks subnets expand-ip-range subnetace1 --prefix-length=28`
- C. `gcloud compute networks subnets expand-ip-range subnetace1 --prefix-length=-12`
- D. There is no command in google cloud to reduce the number of available addresses in a subnet.

答案: D

問題 #118

Your team maintains the infrastructure for your organization. The current infrastructure requires changes. You need to share your proposed changes with the rest of the team. You want to follow Google's recommended best practices. What should you do?

- A. Use Deployment Manager templates to describe the proposed changes and store them in Cloud Source Repositories.
- B. Apply the change in a development environment, run `gcloud compute instances list`, and then save the output in Cloud Source Repositories.
- C. Use Deployment Manager templates to describe the proposed changes and store them in a Cloud Storage bucket.
- D. Apply the change in a development environment, run `gcloud compute instances list`, and then save the output in a shared Storage bucket.

答案: A

解題說明:

Showing Deployment Manager templates to your team will allow you to define the changes you want to implement in your cloud infrastructure. You can use Cloud Source Repositories to store Deployment Manager templates and collaborate with your team. Cloud Source Repositories are fully-featured, scalable, and private Git repositories you can use to store, manage and track changes to your code.

問題 #119

You are running multiple VPC-native Google Kubernetes Engine clusters in the same subnet. The IPs available for the nodes are exhausted, and you want to ensure that the clusters can grow in nodes when needed. What should you do?

- A. Add an alias IP range to the subnet used by the GKE clusters.
- B. Expand the CIDR range of the relevant subnet for the cluster.
- C. Create a new VPC, and set up VPC peering with the existing VPC.
- D. Create a new subnet in the same region as the subnet being used.

答案: B

解題說明:

Every subnet must have a primary IP address range. You can expand the primary IP address range at any time, even when Google Cloud resources use the subnet; however, you cannot shrink or change a subnet's primary IP address scheme after the subnet has been created. The first two and last two IP addresses of a primary IP address range are reserved by Google Cloud.

問題 #120

Your organization has three existing Google Cloud projects. You need to bill the Marketing department for only their Google Cloud services for a new initiative within their group. What should you do?

- A. 1. Verify that you are assigned the Organization Administrator IAM role for your organization's Google Cloud account
2. Create a new Google Cloud Project for the Marketing department
3. Link the new project to a Marketing Billing Account.
- B. 1. Verify that you are assigned the Billing Administrator IAM role for your organization's Google Cloud Project for the Marketing department
2. Link the new project to a Marketing Billing Account
- C. 1. Verify that you are assigned the Billing Administrator IAM role for your organization's Google Cloud account
2. Create a new Google Cloud Project for the Marketing department

3. Set the default key-value project labels to department marketing for all services in this project
- D. 1. Verify that you are assigned the Organization Administrator IAM role for your organization's Google Cloud account
2. Create a new Google Cloud Project for the Marketing department
3. Set the default key value project labels to department marketing for all services in this protect

答案： B

解題說明：

roles/billing.admin role is an owner role for a billing account. Use it to manage payment instruments, configure billing exports, view cost information, link and unlink projects and manage other user roles on the billing account.

問題 #121

You created several resources in multiple Google Cloud projects. All projects are linked to different billing accounts. To better estimate future charges, you want to have a single visual representation of all costs incurred. You want to include new cost data as soon as possible. What should you do?

- A. Configure Billing Data Export to BigQuery and visualize the data in Data Studio.
- B. Fill all resources in the Pricing Calculator to get an estimate of the monthly cost.
- C. Visit the Cost Table page to get a CSV export and visualize it using Data Studio.
- D. Use the Reports view in the Cloud Billing Console to view the desired cost information.

答案： A

解題說明：

<https://cloud.google.com/billing/docs/how-to/export-data-bigquery> "Cloud Billing export to BigQuery enables you to export detailed Google Cloud billing data (such as usage, cost estimates, and pricing data) automatically throughout the day to a BigQuery dataset that you specify."
