After successful competition of the Salesforce Analytics-Arch-201 certification, the certified candidates can put their career on the right track and achieve their professional career objectives in a short time period. For the recognition of skills and knowledge, more career opportunities, professional development, and higher salary potential, the Salesforce Analytics-Arch-201 Certification Exam is the proven way to achieve these tasks quickly.

### Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Design a Tableau Infrastructure:</b> This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Deploy Tableau Server:</b> This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li> </ul>

## Precise Analytics-Arch-201 Exam Questions offer you high-efficient Study Materials - Pass4sureCert

Each important section of the syllabus has been given due place in our Analytics-Arch-201 practice braindumps. Hence, you never feel frustrated on any aspect of preparation, staying with our Analytics-Arch-201 learning guide. Every Analytics-Arch-201 exam question included in the versions of the PDF, SOFTWARE and APP online is verified, updated and approved by the experts. With these outstanding features of our Analytics-Arch-201 Training Materials, you are bound to pass the exam with 100% success guaranteed.

## Salesforce Certified Tableau Architect Sample Questions (Q164-Q169):

### NEW QUESTION # 164

You're setting up Tableau Server on a Windows system and encounter errors indicating DNS resolution problems. What is the most appropriate initial action to resolve this issue?

- A. Increasing the bandwidth allocation to the Windows server to improve network communication
- B. Changing the domain name of the Windows server to align with the DNS settings
- C. Installing a secondary DNS server to provide redundancy in the network configuration
- **D. Verifying and correcting the DNS settings on the Windows server**

**Answer: D**

Explanation:

Verifying and correcting the DNS settings on the Windows server When encountering DNS resolution problems during Tableau Server setup on Windows, the initial and most appropriate action is to verify and correct the DNS settings on the server. Incorrect DNS settings can prevent the server from resolving domain names properly, leading to network communication errors. Option A is incorrect because changing the domain name of the server is an excessive step before checking the existing DNS settings. Option C is incorrect as increasing bandwidth allocation does not address DNS resolution problems. Option D is incorrect because installing a secondary DNS server, while beneficial for redundancy, does not directly resolve existing DNS configuration issues on the primary server.

### NEW QUESTION # 165

A rapidly expanding retail company is planning to deploy Tableau for its nationwide operations. What is the most important factor to consider for ensuring the scalability of the Tableau deployment?

- **A. Choosing a deployment model that can scale with increasing data volume and user count**

- B. Using a single server regardless of increasing data and user requirements
- C. Focusing only on current data requirements without considering future growth
- D. Limiting the number of users to control system load

**Answer: A**

Explanation:

Choosing a deployment model that can scale with increasing data volume and user count. This option ensures that as the company grows, the Tableau deployment can accommodate increasing data volumes and a higher number of users, which is crucial for a rapidly expanding business. Option A is incorrect because limiting the number of users can hinder operational efficiency and business growth. Option B is incorrect as it fails to consider future growth, which is essential for a scalable and future-proof deployment. Option D is incorrect because relying on a single server for an expanding operation can lead to performance issues and does not support scalability.

#### NEW QUESTION # 166

A company is migrating its Tableau workbooks and data sources from one server to another. Which feature of the Tableau Content Migration Tool is most critical for this process?

- A. The capability to only migrate the most recently accessed workbooks
- B. The option to manually migrate each workbook individually for better control
- C. The ability to change the visual design of workbooks during the migration
- D. The functionality to automatically update data source connections in the workbooks during migration

**Answer: D**

Explanation:

The functionality to automatically update data source connections in the workbooks during migration. Automatically updating data source connections is essential to ensure that workbooks function correctly after migration, maintaining data integrity and continuity. Option A is incorrect because changing the visual design is not the primary function of a migration tool. Option C is incorrect as manual migration of each workbook is time-consuming and prone to errors. Option D is incorrect because it's important to migrate all necessary workbooks, not just the most recently accessed ones.

#### NEW QUESTION # 167

A large retail company with a high volume of daily Tableau users requires a configuration that optimizes query performance and user experience. Which configuration setting should be prioritized?

- A. Reduce the "cache.server.timeout" value to lower the caching time
- B. Increase the "vizqlserver.querylimit" value to allow more concurrent queries
- C. Decrease the "vizqlserver.session.expiry.timeout" value to reduce session timeouts
- D. Increase the "backgrounder.querylimit" value to allow more concurrent queries

**Answer: B**

Explanation:

Increase the "vizqlserver.querylimit" value to allow more concurrent queries. Increasing the "vizqlserver.querylimit" value allows more concurrent queries, which is crucial for a company with a high volume of daily users to improve query performance and user experience. Option A is incorrect as decreasing session timeout may disrupt user experience. Option B is incorrect because "backgrounder.querylimit" affects background tasks, not immediate user query performance. Option C is incorrect as reducing cache time might negatively impact performance for frequently accessed data.

#### NEW QUESTION # 168

During a blue-green deployment of Tableau Server, what is a critical step to ensure data consistency between the blue and green environments?

- A. Implementing load balancing between the blue and green environments
- B. Running performance tests in the green environment
- C. Increasing the storage capacity of the green environment
- D. Synchronizing data and configurations between the two environments before the switch

**Answer: D**

Explanation:

Synchronizing data and configurations between the two environments before the switch Synchronizing data and configurations between the blue and green environments is a critical step in a blue-green deployment. This ensures that when the switch is made from the blue to the green environment, the green environment is up-to-date with the latest data and settings, maintaining data consistency and preventing any loss of information or functionality. Option A is incorrect because while performance testing is important, it does not directly ensure data consistency between the two environments. Option C is incorrect as load balancing between the two environments is not typically part of a blue-green deployment strategy, which focuses on one environment being active at a time. Option D is incorrect because simply increasing storage capacity in the green environment does not directly contribute to data consistency for the deployment.

### NEW QUESTION # 169

• • • • •

The Analytics-Arch-201 certificate is the bridge between "professional" and "unprofessional", and it is one of the ways for students of various schools to successfully enter the society and embark on an ideal career. It is also one of the effective ways for people in the workplace to get more opportunities. But few people can achieve it for the limit of time or other matters. But with our Analytics-Arch-201 Exam Questions, it is as easy as pie. Just buy our Analytics-Arch-201 training guide, then you will know how high-effective it is!
