

# PAP-001 Exam Practice Training Materials - PAP-001 Test Dumps - Free4Torrent

BTW, DOWNLOAD part of Free4Torrent PAP-001 dumps from Cloud Storage: [https://drive.google.com/open?id=1N\\_1AhfMJ-fFe0cfQPAnSTZPD61OMRgji](https://drive.google.com/open?id=1N_1AhfMJ-fFe0cfQPAnSTZPD61OMRgji)

From the moment you visit on our website, you are enjoying our excellent service on our PAP-001 study guide. And no matter what kind of the problems you come to, we will solve it for you. We want to eliminate all unnecessary problems for you, and you can learn without any problems. You may have enjoyed many services, but the professionalism of our PAP-001 simulating exam will conquer you. Our company has always upheld a professional attitude, which is reflected in our PAP-001 exam braindumps, but also reflected in our services.

PAP-001 training materials are famous for high quality, and we have received many good feedbacks from our customers. PAP-001 exam materials are compiled by skilled professionals, and they possess the professional knowledge for the exam, therefore, you can use them at ease. In addition, PAP-001 training materials contain both questions and answers, and it's convenient for you to have a check after practicing. You can receive download link and password within ten minutes after paying for PAP-001 Exam Braindumps, it's convenient. If you don't receive, you can contact us, and we will solve this problem for you as quickly as possible.

## Realistic Ping Identity PAP-001 Valid Test Online Are Leading Materials & Trusted PAP-001: Certified Professional - PingAccess

We consider the actual situation of the test-takers and provide them with high-quality PAP-001 learning materials at a reasonable price. Choose the PAP-001 test guide absolutely excellent quality and reasonable price, because the more times the user buys the PAP-001 test guide, the more discounts he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the PAP-001 learning questions, our staff will help solve them as soon as possible.

### Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Integrations: This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.</li> </ul>

## Ping Identity Certified Professional - PingAccess Sample Questions (Q31-Q36):

### NEW QUESTION # 31

What is the default port for the administrative console?

- A. 0
- **B. 1**
- C. 2
- D. 3

**Answer: B**

Explanation:

When PingAccess is first installed, the Administrative Console (the web-based UI for managing configuration) is bound to a default port of 9000. This is documented in the installation and configuration guides:

\* Exact Extract from documentation:

"By default, the administrative console is available at `https://<host>:9000`." (PingAccess Installation Guide - Default Ports) This means that unless the administrator has explicitly changed the port in `run.properties` or during installation, the console will always be available on port 9000.

Option Analysis:

\* A. 9000#Correct. Default administrative console port.

\* B. 3000#Incorrect. This is not a PingAccess default port.

\* C. 9090#Incorrect. Sometimes used by other Ping products for APIs, but not the PingAccess admin console.

\* D. 3030#Incorrect. Not a default PingAccess port.

Reference: PingAccess Installation Guide - Default Administrative Console Port (9000).

### NEW QUESTION # 32

Which two protocols does PingAccess use for authentication and authorization? (Choose 2 answers.)

- A. WS-Fed
- B. WS-Trust
- C. SAML
- **D. OAuth2**
- **E. OIDC**

**Answer: D,E**

Explanation:

PingAccess is designed to work with modern identity protocols. It does not support legacy WS-\* protocols directly.

Exact Extract:

"PingAccess integrates with OAuth 2.0 and OpenID Connect (OIDC) to provide authentication and authorization for web and API resources."

\* Option A (SAML) is incorrect - PingAccess does not natively consume SAML assertions; SAML can be used indirectly via PingFederate.

\* Option B (WS-Fed) is not supported.

\* Option C (WS-Trust) is not supported.

\* Option D (OAuth2) is correct - used for authorization and token validation.

\* Option E (OIDC) is correct - used for user authentication and sessions.

### NEW QUESTION # 33

An administrator is setting up PingAccess to terminate SSL for a proxied application. What action must the administrator take to configure an existing certificate for that application?

- A. Assign the Key Pair to the Virtual Host
- B. Set the secure flag to Yes in the Site configuration
- C. Assign the Key Pair to the Agent Listener
- D. Enable Require HTTPS in the Application configuration

**Answer: A**

Explanation:

PingAccess terminates SSL at the Virtual Host level. To configure an existing certificate, the administrator must assign the appropriate Key Pair (which contains the certificate and private key) to the Virtual Host.

Exact Extract:

"SSL termination occurs on the engine listener through virtual hosts. Assign the certificate's key pair to the virtual host to secure proxied applications."

\* Option A is correct - assign the key pair to the Virtual Host for SSL termination.

\* Option B is incorrect - Require HTTPS enforces secure access but does not configure SSL termination.

\* Option C is incorrect - Agent Listener is for PingAccess Agents, not proxied apps.

\* Option D is incorrect - secure flag affects cookie settings, not SSL certificates.

Reference: PingAccess Administration Guide - Virtual Hosts and Key Pairs

### NEW QUESTION # 34

An administrator is setting up a new PingAccess cluster with the following:

\* Administrative node hostname: pa-admin.company.com

\* Replica administrative node hostname: pa-admin2.company.com

Which two options in the certificate would be valid for the administrative node key pair? (Choose 2.)

- A. Subject = pa-admin2.company.com
- B. Subject = pa-admin.company.com
- C. Subject Alternative Names = pa-admin.company.com, pa-admin2.company.com
- D. Issuer = pa-admin.company.com
- E. Subject = \*.company.com

**Answer: C,E**

Explanation:

Exact Extract (from PingAccess documentation):

"The key pair that you create for the CONFIG QUERY listener must include both the administrative node and the replica administrative node. To make sure the replica administrative node is included, you can either use a wildcard certificate or define subject alternative names in the key pair that use the replica administrative node's DNS name." Why B and D are correct:

\* \*B. Subject = .company.com- A wildcard certificate for \*.company.com is valid for both pa-admin.

company.com and pa-admin2.company.com, satisfying the documented requirement that the key pair include both hostnames for the CONFIG QUERY listener.

\* \*D. Subject Alternative Names = pa-admin.company.com, pa-admin2.company.com- Explicitly placing both DNS names in the SAN extension also satisfies the requirement that the certificate cover both the administrative node and the replica administrative node.

Why the other options are incorrect:

\* A. Issuer = pa-admin.company.com- The Issuer field identifies the certificate authority (CA) that signed the certificate, not the service hostname. Setting the issuer to a host value is not how X.509 server certificates are validated and would not meet the hostname matching requirement.

\* C. Subject = pa-admin.company.com- While this covers the administrative node, it does not include the replica administrative node. Without a wildcard or SAN entries, it fails the requirement that the key pair include both hostnames.

\* E. Subject = pa-admin2.company.com- Similarly, this would only cover the replica administrative node and not the primary administrative node, failing the requirement.

### NEW QUESTION # 35

A business requires logs to be written to a centralized Oracle database. Which two actions must the PingAccess administrator take to enable this? (Choose 2 answers.)

- A. Copy the database driver JAR file to the PA\_HOME/lib directory.
- B. Enable the Audit flag in the Resource.
- C. Configure log4j2.xml and log4j2.db.properties.
- D. Remove the logs located in PA\_HOME/log.
- E. Import the database certificate into the Trusted Certificate Group.

Answer: A,C

Explanation:

PingAccess supports logging directly to a relational database using Log4j database appenders. To enable this:

- \* Configure log4j2.xml to use a JDBC Appender.
- \* Configure log4j2.db.properties with the database connection information.
- \* Provide the appropriate database driver in the PA\_HOME/lib directory.

Exact Extract:

"To log to a database, configure log4j2.xml and log4j2.db.properties, and place the JDBC driver JAR file in PA\_HOME/lib."

- \* Option A is correct - both files must be configured.
- \* Option B is incorrect - existing logs do not need removal.
- \* Option C is incorrect - enabling audit is unrelated to database logging.
- \* Option D is correct - the Oracle JDBC driver must be installed in PA\_HOME/lib.
- \* Option E is incorrect unless TLS is used to connect to the DB, but it is not required for standard DB logging setup.
