

# AWS-Solutions-Architect-Associate Exam Reliable Test Simulator–Fantastic Reliable AWS-Solutions-Architect-Associate Braindumps Ebook Pass Success

**Amazon (AWS) Certification Details**

**AWS Solutions Architect Associate (SAA-C03)**

<b>Prior Certification</b> Not Required	<b>Exam Validity</b> 3 Years	<b>Exam Fee</b> \$150 USD
<b>Exam Duration</b> 130 minutes	<b>No. of Questions</b> 60-70	<b>Passing Marks</b> 70-75%
<b>Recommended Experience</b> At least 1 year of hands-on experience designing secure, high-performing, cost-effective, and scalable systems on AWS.		<b>Exam Format</b> Multiple Choice & Multiple Select
<b>Languages</b> English, French, German, Italian, Japanese, Korean, Portuguese, Simplified Chinese, and Spanish

By using our AWS-Solutions-Architect-Associate exam braindumps, it will be your habitual act to learn something with efficiency. With the cumulative effort over the past years, our AWS-Solutions-Architect-Associate study guide has made great progress with passing rate up to 98 to 100 percent among the market. A lot of professional experts concentrate to making our AWS-Solutions-Architect-Associate Preparation materials by compiling the content so they have gained reputation in the market for their proficiency and dedication.

## Understanding functional and technical aspects of AWS Solutions Associate Design for Organizational Complexity

- Design a multi-tier associate solution

Determining a solution design similar to access patterns, determining a scaling strategy for elements used in a design, selecting a suitable database based on specifications and selecting a relevant compute and storage service according to requirements

- Design highly available and/or fault-tolerant associates

Determining the number of resources required to render a fault-tolerant associate over Availability Zones, selecting a convenient configuration to decrease single points of failure, applying AWS services to enhance the authenticity of legacy applications when application adjustments are not possible, selecting an appropriate emergency recovery strategy to meet business needs, and identifying key performance indicators to guarantee the availability of the solution

- Design decoupling mechanisms using AWS services

Determining the specific AWS services which can be leveraged to achieve loose coupling of components and determining when to leverage serverless technologies to allow decoupling

- Choose appropriate resilient storage

Defining a strategy to secure the durability of data, distinguishing how data service consistency will influence the operation of the application, selecting data services that will satisfy the access requirements of the application, and identifying storage services that can be utilised with hybrid or non-cloud-native applications.

## Purchasing Safety

TestKingFree AWS-Solutions-Architect-Associate exam dumps in three different formats has AWS-Solutions-Architect-Associate questions PDF and the facility of Amazon AWS-Solutions-Architect-Associate dumps. We have made these Amazon AWS-Solutions-Architect-Associate questions after counseling a lot of experts and getting their feedback. The 24/7 customer support team is available at TestKingFree for Amazon AWS-Solutions-Architect-Associate Dumps users so that they don't get stuck in any hitch.

The AWS-Solutions-Associate exam is a challenging but rewarding certification exam for IT professionals looking to validate their skills in designing and deploying scalable systems on AWS. With the right preparation and training, candidates can successfully pass the exam and earn the AWS Certified Solutions Architect - Associate (SAA-C02) certification, which can lead to new career opportunities and higher salaries.

## Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q550-Q555):

### NEW QUESTION # 550

Your Amazon EC2 instances must access the AWS API, so you created a NAT gateway in an existing subnet. When you try to access the AWS API, you are unsuccessful.

What could be preventing access?

- A. The instances need an IAM role granting access to the NAT gateway
- B. The instances are not in the same subnet as the NAT gateway
- C. The NAT gateway subnet does not have a route to an Internet gateway
- D. The NAT gateway does not have a route to the virtual private gateway

**Answer: C**

### NEW QUESTION # 551

A company is migrating some of its applications to AWS. The company wants to migrate and modernize the applications quickly after it finalizes networking and security strategies. The company has set up an AWS Direct Connect connection in a central network account.

The company expects to have hundreds of AWS accounts and VPCs in the near future. The corporate network must be able to access the resources on AWS seamlessly and also must be able to communicate with all the VPCs. The company also wants to route its cloud resources to the internet through its on-premises data center.

Which combination of steps will meet these requirements? (Select THREE.)

- A. Provision an internet gateway. Attach the internet gateway to subnets. Allow internet traffic through the gateway.
- B. Provision only private subnets. Open the necessary route on the transit gateway and customer gateway to allow outbound internet traffic from AWS to flow through NAT services that run in the data center.
- C. Share the transit gateway with other accounts. Attach VPCs to the transit gateway.
- D. Provision VPC peering as necessary.
- E. Create a Direct Connect gateway and a transit gateway in the central network account. Attach the transit gateway to the Direct Connect gateway by using a transit VIF.
- F. Create a Direct Connect gateway in the central account. In each of the accounts, create an association proposal by using the Direct Connect gateway and the account ID for every virtual private gateway.

**Answer: B,C,E**

Explanation:

For a large-scale multi-account AWS environment with many VPCs and centralized Direct Connect, AWS recommends using a Transit Gateway (TGW) architecture combined with a Direct Connect gateway (DXGW). This setup allows scalable, centralized connectivity between on-premises and multiple VPCs across accounts.

Step B: Creating a Direct Connect gateway and Transit Gateway in a central network account and connecting them via a transit VIF enables the on-premises network to access all connected VPCs.

Step D: Sharing the transit gateway with other accounts via AWS Resource Access Manager (RAM) allows the central TGW to attach VPCs in multiple accounts, simplifying multi-account connectivity.

Step F: To route cloud resources' internet traffic back through the on-premises data center (for centralized egress), provisioning only private subnets and routing outbound internet traffic through NAT or firewall services in the data center is necessary. This requires

configuring transit gateway and customer gateway routes appropriately.

Option A is partially correct in the use of Direct Connect gateway but association proposals are not scalable for hundreds of VPCs and accounts compared to transit gateway. Option C (internet gateway) is irrelevant here as traffic egress is required via on-premises data center, not directly to the internet. Option E (VPC peering) is not scalable for hundreds of VPCs.

#### NEW QUESTION # 552

You are running a news website in the eu-west-1 region that updates every 15 minutes. The website has a world-wide audience it uses an Auto Scaling group behind an Elastic Load Balancer and an Amazon RDS database. Static content resides on Amazon S3, and is distributed through Amazon CloudFront. Your Auto Scaling group is set to trigger a scale up event at 60% CPU utilization, you use an Amazon RDS extra large DB instance with

10,000 Provisioned IOPS its CPU utilization is around 80%. While freeable memory is in the 2 GB range.

Web analytics reports show that the average load time of your web pages is around 1.5 to 2 seconds, but your SEO consultant wants to bring down the average load time to under 0.5 seconds.

How would you improve page load times for your users? (Choose 3 answers)

- A. Configure Amazon CloudFront dynamic content support to enable caching of re-usable content from your site
- B. Switch Amazon RDS database to the high memory extra large Instance type
- C. Add an Amazon ElastiCache caching layer to your application for storing sessions and frequent DB queries
- D. Set up a second installation in another region, and use the Amazon Route 53 latency-based routing feature to select the right region.
- E. Lower the scale up trigger of your Auto Scaling group to 30% so it scales more aggressively.

Answer: B,C,E

#### NEW QUESTION # 553

A company runs an application that uses Amazon RDS for PostgreSQL. The application receives traffic only on weekdays during business hours. The company wants to optimize costs and reduce operational overhead based on this usage.

Which solution will meet these requirements?

- A. Purchase All Upfront reserved DB instances.
- B. Create a custom AWS Lambda function to start and stop the database based on minimum CPU utilization.
- C. Use the Instance Scheduler on AWS to configure start and stop schedules.
- D. Turn off automatic backups. Create weekly manual snapshots of the database.

Answer: C

Explanation:

[https://aws.amazon.com/solutions/implementations/instance-scheduler-on-aws/?nc1=h\\_ls](https://aws.amazon.com/solutions/implementations/instance-scheduler-on-aws/?nc1=h_ls) The Instance Scheduler on AWS solution automates the starting and stopping of Amazon Elastic Compute Cloud (Amazon EC2) and Amazon Relational Database Service (Amazon RDS) instances. This solution helps reduce operational costs by stopping resources that are not in use and starting them when they are needed<sup>1</sup>. The solution allows you to define custom schedules and periods using a command line interface (CLI) or an SSM maintenance window<sup>1</sup>. You can also choose between different payment options for the reserved DB instances, such as No Upfront, Partial Up front, or All Upfront<sup>2</sup>.

#### NEW QUESTION # 554

A company wants to create an API to authorize users by using JSON Web Tokens (JWTs). The company needs to support dynamic access to multiple AWS services by using path-based routing.

Which solution will meet these requirements?

- A. Deploy a Network Load Balancer behind an Amazon API Gateway HTTP API. Use Amazon Cognito for authorization.
- B. Deploy an Application Load Balancer behind an Amazon API Gateway REST API. Configure IAM authorization.
- C. Deploy an Application Load Balancer behind an Amazon API Gateway HTTP API. Use Amazon Cognito for authorization.
- **D. Deploy a Network Load Balancer behind an Amazon API Gateway REST API. Use an AWS Lambda function as a custom authorizer.**

**Answer: D**
