P.S. Free & New NCLEX-RN dumps are available on Google Drive shared by RealExamFree: <https://drive.google.com/open?id=1mh5dDfeDWMMeOPIS4rEWeWHSacwi21Ov>

RealExamFree is a very good website to provide a convenient service for the NCLEX certification NCLEX-RN exam. RealExamFree's products can help people whose IT knowledge is not comprehensive pass the difficulty NCLEX certification NCLEX-RN exam. If you add the NCLEX Certification NCLEX-RN Exam product of RealExamFree to your cart, you will save a lot of time and effort. RealExamFree's product is developed by RealExamFree's experts' study of NCLEX certification NCLEX-RN exam, and it is a high quality product.

Passing the NCLEX-RN Exam is a critical step towards becoming a licensed registered nurse. In addition to passing the exam, nurses must also meet other requirements for licensure, such as completing a nursing program and passing a criminal background check. Once licensed, nurses must also fulfill continuing education requirements to maintain their license and stay up-to-date on the latest developments in nursing practice.

As a matter of fact, you only to spend about 20 to 30 hours on studying our NCLEX-RN Practice Engine and you will get your certification easily. Our NCLEX-RN training guide can help you lead a better life.

The National Council Licensure Examination (NCLEX-RN) is a standardized test that assesses the competency of registered nurses

(RNs) in the United States of America. NCLEX-RN Exam is developed and administered by the National Council of State Boards of Nursing (NCSBN). It is designed to evaluate the knowledge, skills, and abilities of entry-level RNs to ensure they are competent and safe to practice nursing.

## NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q348-Q353):

### NEW QUESTION # 348

A 52-year-old client's abdominal aortic aneurysm ruptured. She received rapid massive blood transfusions for bleeding. One potential complication of blood administration for which she is especially at risk is:

- A. Hypocalcemia
- B. Circulatory overload
- C. Air embolus
- D. Hypokalemia

**Answer: A**

Explanation:

Section: Questions Set C

Explanation:

(A) Air embolism is a potential complication of blood administration, but it is fairly rare and can be prevented by using good IV technique. (B) Circulatory overload is a potential complication of blood administration, but because this client is actively bleeding, she is not at high risk for overload. (C) Hypocalcemia is a potential complication of blood administration that occurs in situations where massive transfusion has occurred over a short period of time. It occurs because the citrate in stored blood binds with the client's calcium. Another potential complication for which this client is especially at risk is hypothermia, which can be prevented by using a blood warmer to administer the blood. (D) Hypokalemia is not a complication of blood administration.

### NEW QUESTION # 349

A client had abdominal surgery this morning. The nurse notices that there is a small amount of bloody drainage on his surgical dressing. The nurse would document this as what type of drainage?

- A. Serosanguinous
- B. Sanguinous
- C. Catarrhal
- D. Purulent

**Answer: B**

Explanation:

Explanation

(A) Drainage from a surgical incision usually proceeds from sanguinous to serosanguinous. (B) Purulent drainage usually indicates infection and should not be seen initially from a surgical incision. (C) Drainage from a surgical incision is initially sanguinous, proceeding to serosanguinous, and then to serous. (D) Catarrhal is a type of exudate seen in upper respiratory infections, not in surgical incisions.

### NEW QUESTION # 350

A behavioral modification program is recommended by the multidisciplinary team working with a 15-year-old client with anorexia nervosa. A nursing plan of care based on this modality would include:

- A. Encouraging her to verbalize her feelings concerning food and food intake
- B. Restriction to the unit until she has gained 2 lb
- C. Provision for a high-calorie, high-protein snack between meals
- D. Role playing the client's eating behaviors

**Answer: B**

Explanation:

Explanation

(A) This answer is incorrect. Role playing is based on learning but is not based on the behavioral modification model. (B) This answer is correct. The behavioral modification model is based on negative and positive reinforcers to change behavior. (C) This answer is incorrect. Verbal catharsis is not an intervention based on behavioral modification. (D) This answer is incorrect. Although an acceptable nursing intervention, it is not based on behavioral modification.

#### NEW QUESTION # 351

After 7 hours in restraints and a total of 30-mg haloperidol in divided doses, a client complains of stiffness in his neck and his tongue "pulling to one side." These extrapyramidal symptoms (EPS) will most likely be relieved by the administration of:

- A. Thiothixene (Navane)
- B. Lorazepam (Ativan)
- C. **Benzotropine (Cogentin)**
- D. Flurazepan (Dalmane)

**Answer: C**

Explanation:

(A) Lorazepam is an antianxiety agent that produces muscle relaxation and inhibits cortical and limbic arousal. It has no action in the basal ganglia of the brain. (B) Benzotropine acts to reduce EPS by blocking excess CNS cholinergic activity associated with dopamine deficiency in the basal ganglia by displacing acetylcholine at the receptor site. (C) Thiothixene is an antipsychotic known to block dopamine in the limbic system, thereby causing EPS. (D) Flurazepan is a hypnotic that acts in the limbic system, thalamus, and hypothalamus of the CNS to produce sleep. It has no known action in the basal ganglia.

#### NEW QUESTION # 352

A schizophrenic client has made sexual overtures toward her physician on numerous occasions. During lunch, the client tells the nurse, "My doctor is in love with me and wants to marry me." This client is using which of the following defense mechanisms?

- A. **Projection**
- B. Displacement
- C. Reaction formation
- D. Suppression

**Answer: A**

Explanation:

Explanation

(A) Displacement involves transferring feelings to a more acceptable object. (B) Projection involves attributing one's thoughts or feelings to another person. (C) Reaction formation involves transforming an unacceptable impulse into the opposite behavior. (D) Suppression involves the intentional exclusion of unpleasant thoughts or experiences.
