SPLK-1002 Latest Test Bootcamp & SPLK-1002 Mock Exam

Our SPLK-1002 test guide is suitable for you whichever level you are in right now. Whether you are in entry-level position or experienced exam candidates who have tried the exam before, this is the perfect chance to give a shot. A growing number of exam

candidates are choosing our SPLK-1002 Exam Questions, why are you still hesitating? As long as you have make up your mind, our Splunk Core Certified Power User Exam study question is available in five minutes, so just begin your review now! This could be a pinnacle in your life.

Splunk is one of the most popular platforms for analyzing machine-generated data. This platform is used by companies across various industries to gain insights into their data and make informed decisions. The Splunk SPLK-1002 Exam is designed for individuals who want to demonstrate their proficiency in using Splunk Core. Splunk Core Certified Power User Exam certification is ideal for professionals looking to advance their careers in fields such as IT operations, security, and business analytics.

Splunk Core Certified Power User Exam Sample Questions (Q113-Q118):

NEW QUESTION # 113

When can a pipe follow a macro?

- A. The current user must own the macro.
- B. Only when sharing is set to global for the macro.
- **C. The macro must be defined in the current app.**
- D. A pipe may always follow a macro.

Answer: C

NEW QUESTION # 114

What does the fillnull command replace null values with, if the value argument is not specified?

- A. N/A
- B. NULL
- **C. 0**
- D. NaN

Answer: C

Explanation:

Reference:

The fillnull command is a search command that replaces null values with a specified value or 0 if no value is specified. Null values are values that are missing, empty, or undefined in Splunk. The fillnull command can replace null values for all fields or for specific fields.

The fillnull command can take an optional argument called value that specifies the value to replace null values with. If no value argument is specified, the fillnull command will replace null values with 0 by default.

NEW QUESTION # 115

Using the Field Extractor (FX) tool, a value is highlighted to extract and give a name to a new field. Splunk has not successfully extracted that value from all appropriate events. What steps can be taken so Splunk successfully extracts the value from all appropriate events? (select all that apply)

- A. Re-ingest the data and attempt to extract from a new dataset.
- **B. Edit the regular expression manually.**
- C. Click on the event where the field was not extracted and choose "Change to Delimited".
- **D. Select an additional sample event with the Field Extractor (FX) and highlight the missing value in the event.**

Answer: B,D

Explanation:

When using the Field Extractor (FX) tool in Splunk and the tool fails to extract a value from all appropriate events, there are specific steps you can take to improve the extraction process. These steps involve interacting with the FX tool and possibly adjusting the extraction method:

A: Select an additional sample event with the Field Extractor (FX) and highlight the missing value in the event. This approach allows Splunk to understand the pattern better by providing more examples. By highlighting the value in another event where it wasn't extracted, you help the FX tool to learn the variability in the data format or structure, improving the accuracy of the field extraction.

D: Edit the regular expression manually. Sometimes the FX tool might not generate the most accurate regular expression for the field extraction, especially when dealing with complex log formats or subtle nuances in the data. In such cases, manually editing the regular

expression can significantly improve the extraction process. This involves understanding regular expression syntax and how Splunk extracts fields, allowing for a more tailored approach to field extraction that accounts for variations in the data that the automatic process might miss.

Options B and C are not typically related to improving field extraction within the Field Extractor tool.

Re-ingesting data (B) does not directly impact the extraction process, and changing to a delimited extraction method (C) is not always applicable, as it depends on the specific data format and might not resolve the issue of missing values across events.

NEW QUESTION # 116

Which of the following statements is true, especially in large environments?

- A. The transaction command is faster and more efficient than the stats command.
- B. Use the transaction command when you want to see the results of a calculation.
- **C. The stats command is faster and more efficient than the transaction command**
- D. Use the stats command when you next to group events by two or more fields.

Answer: C

Explanation:
