Lead2Passed is aware that in today's routines many UiPath Certified Professional Agentic Automation Associate (UiAAA) UiPath-AAAv1 exam candidates are under time pressures. Therefore, Lead2Passed offers UiPath Exams questions in three formats that are UiPath-AAAv1 desktop practice test software, web-based practice test, and PDF dumps. These formats of our UiPath Certified Professional Agentic Automation Associate (UiAAA) UiPath-AAAv1 updated exam study material give you multiple training options so that you can meet your UiPath UiPath-AAAv1 exam preparation objectives. Keep reading because we have discussed the specifications of Lead2Passed UiPath-AAAv1 exam questions preparation material in three user-friendly formats.

These practice tools are developed by professionals who work in fields impacting UiPath certification, giving them a foundation of knowledge and actual competence. Our UiPath UiPath-AAAv1 Exam Questions are created and curated by industry specialists. Lead2Passed Is Here To Provide Top-Notch UiPath UiPath-AAAv1 Exam Questions

UiPath-AAAv1 Exam Topics - UiPath-AAAv1 Certification Practice

Our website just believe in offering cost-efficient and time-saving UiPath-AAAv1 exam braindumps to our customers that help them get high passing score easier. Our valid UiPath-AAAv1 test questions can be instantly downloaded and easy to understand with our

100% correct exam answers. One-year free update right will enable you get the latest UiPath-AAA v1 VCE Dumps anytime and you just need to check your mailbox.

UiPath Certified Professional Agentic Automation Associate (UiAAA) Sample Questions (Q40-Q45):

NEW QUESTION # 40

How long does a key-value pair stored in Agent Memory remain available before it expires by default?

- A. Until the agent version is updated, after which key-value pairs are automatically cleared
- **B. 12 months**
- C. 6 months
- D. 3 months

Answer: B

Explanation:

C is correct - according to UiPath documentation, key-value pairs stored in Agent Memory persist for 12 months by default. Agent Memory is a persistent storage layer allowing agents to:

- * Recall decisions or context across runs
- * Store user preferences, status, or temporary flags
- * Maintain statefulness without relying on external databases

This capability is especially useful for:

- * Omnichannel customer interactions
- * Preference-aware recommendations
- * Tracking previously taken actions for continuity

Although memory storage is long-lasting (12 months), developers can:

- * Manually reset or expire entries
- * Use different memory scopes (e.g., per-user, per-agent)
- * Design memory-aware flows for personalization

Option D is incorrect - memory is not auto-cleared on version updates.

A and B understate the retention policy - default expiration is clearly documented as 12 months unless changed manually.

Agent Memory is a powerful enabler of context-rich, stateful automations, especially for conversational or ongoing interactions.

NEW QUESTION # 41

Which of the following is a benefit of UiPath-built agents?

- **A. They allow for quick agent creation using a low-code development application.**
- B. They require extensive coding expertise for development.
- C. They are limited to handling structured workflows only.
- D. They cannot integrate with UiPath Orchestrator.

Answer: A

Explanation:

D is correct - a major advantage of UiPath-built agents is their low-code creation model, which allows business users and developers to quickly create, test, and deploy agents.

Key points from UiPath's Agentic Automation platform:

Agents are built in Studio Web, using a drag-and-drop UI and agent designer canvas.

Low-code tools allow teams to design agent prompts, behavior logic, tool connections, and escalations without deep programming skills.

Agents integrate with UiPath Orchestrator for full lifecycle management.

UiPath's low-code stack is designed to:

Lower the barrier to AI adoption

Accelerate time-to-value

Allow cross-functional teams to collaborate on intelligent automation

Options A and B are incorrect - agents support both structured and unstructured workflows, and fully integrate with Orchestrator.

C is false - low-code is a core value prop.

NEW QUESTION # 42

Why is goal-oriented execution important in autonomous systems?

- A. It prioritizes quick execution over producing quality results.
- **B. It aligns actions and processes with predefined objectives effectively.**
- C. It ensures that all tasks are equally prioritized without regard for outcomes.
- D. It focuses more on adapting tasks randomly rather than achieving goals.

Answer: B

Explanation:

Dis correct -goal-oriented execution is a core design principle in autonomous and agentic systems, including those built in UiPath's agent framework. It ensures that every decision, action, or tool invocation is aligned with a clearly defined outcome, such as resolving a ticket, completing a form, or drafting a report.

In UiPath's agent design methodology, agents are given:

- * A defined role (e.g., invoice reviewer, feedback classifier)
- * A goal (e.g., triage input, approve/reject based on rules)
- * Constraints and context to operate within

This focus ensures agents don't just act reactively - they pursue a target state and adapt dynamically based on available information and decision rules.

Option A misunderstands autonomy - randomness undermines reliability.

B ignores the prioritization mechanism that's critical for agents.

C confuses speed with success - in goal-oriented systems, the right outcome is more important than speed alone.

Goal alignment is what enables agents to reason, prioritize, and escalate intelligently - making autonomous execution not only possible but scalable and safe.

NEW QUESTION # 43

A company launches a marketing campaign powered by generative AI and agentic AI technologies. What best describes how their roles differ?

- A. Generative AI focuses on improving customer sentiment analysis, while agentic AI refines campaign content.
- B. Agentic AI designs campaign materials, while generative AI handles customer queries in real-time.
- C. Both generative AI and agentic AI collaborate to create promotional materials.
- **D. Generative AI produces outputs like text or images, while agentic AI focuses on intelligent automation, decision-making, and dynamic task execution.**

Answer: D

Explanation:

The correct answer is A - UiPath clearly differentiates Generative AI from Agentic AI based on function and scope:

- * Generative AI focuses on content creation: generating emails, blog posts, social posts, or product descriptions using LLMs.
- * Agentic AI wraps this output with contextual automation - it interprets, makes decisions, triggers actions, and interacts across systems.

In this marketing scenario:

- * Generative AI might write an email campaign or social caption.
- * Agentic AI would decide when to send it, to whom, and based on which signals or workflows - possibly also adjusting the content based on campaign performance, customer segments, or behavior.

UiPath's Agentic Automation model positions agentic AI as the "doer" - an orchestrator of dynamic workflows, not just a content engine. That's why it underpins use cases like intelligent triage, escalation, or campaign coordination.

Options B, C, and D conflate or reverse these roles, which don't align with UiPath's design guidance.

NEW QUESTION # 44

What is the primary recommendation for using <https://www.google.com/search?q=bpmn.uipath.com> to access the Maestro modeling canvas?

- A. Always use <https://www.google.com/search?q=bpmn.uipath.com> as the primary tool for modeling processes with full implementation features.
- B. Utilize <https://www.google.com/search?q=bpmn.uipath.com> exclusively for creating agentic processes with implementation capabilities.

- C. Use <https://www.google.com/search?q=bpmn.uipath.com> as a sandbox since the tool does not offer implementation capabilities.
- D. Use <https://www.google.com/search?q=bpmn.uipath.com> only to import predefined process templates from Studio Web.

Answer: C

Explanation:

Bis correct - the bpmn.uipath.com canvas is a lightweight sandbox environment for drafting and visualizing agentic processes, but does not include full implementation capabilities. It is part of UiPath's broader Maestro experience, designed for early-stage discovery, collaboration, and ideation.

Key characteristics:

- * Drag-and-drop BPMN modeling
- * Ability to outline agents, decisions, automations, escalations
- * Useful for collaborating with stakeholders before technical development begins
- * Lacks direct execution, tool integration, or runtime support

It is not a replacement for Studio Web or Automation Cloud, which are used for:

- * Full implementation
- * Connecting to tools, prompts, or systems
- * Deployment and testing

Option A is incorrect - implementation requires transition into Studio Web.

C is false - the tool is for modeling, not template import/export.

D misrepresents its role - it's not the full-featured modeling tool, but a discovery-phase sandbox.

Best practice: use bpmn.uipath.com to design collaboratively, then export or map the flow into Studio, or Maestro production canvas for build-out and testing.
