

# Pass4sure PT0-003 Study Materials, PT0-003 Test Vce

P.S. Free 2026 CompTIA PT0-003 dumps are available on Google Drive shared by PracticeDump: [https://drive.google.com/open?id=1wsghtbuRg5zfbC-FPYSJb9bC2Z\\_1IX95](https://drive.google.com/open?id=1wsghtbuRg5zfbC-FPYSJb9bC2Z_1IX95)

Passing CompTIA actual test will make you stand out from other people and you will have access to the big companies. But it is not an easy thing for you to prepare PT0-003 practice test. The best way for you is choosing a training tool to practice PT0-003 Study Materials. If you have no idea about the training tools, PracticeDump will be your best partner in the way of passing the IT certification.

To attempt the CompTIA PT0-003 exam optimally and ace it on the first attempt, proper exam planning is crucial. Since the CompTIA PT0-003 exam demands a lot of time and effort, we designed the CompTIA PT0-003 Exam Dumps in such a way that you would not have to go through sleepless study nights or disturb your schedule.

## PT0-003 Test Vce - PT0-003 Exam Sample

PracticeDump CompTIA PT0-003 exam materials contain the complete unrestricted dump. So with it you can easily pass the exam. PracticeDump CompTIA PT0-003 exam training materials is a good guidance. It is the best training materials. You can use the questions and answers of PracticeDump CompTIA PT0-003 Exam Training materials to pass the exam.

## CompTIA PenTest+ Exam Sample Questions (Q71-Q76):

### NEW QUESTION # 71

A penetration tester wants to accomplish ARP poisoning as part of an attack. Which of the following tools will the tester most likely utilize?

- A. Nmap
- B. Netcat
- C. Wireshark

- **D. Ettercap**

**Answer: D**

Explanation:

ARP poisoning is a technique that exploits the weakness of the ARP protocol to redirect network traffic to a malicious host. Ettercap is a tool that can perform ARP poisoning and other network attacks, such as DNS spoofing, SSL stripping, and password sniffing. Wireshark, Netcat, and Nmap are not designed for ARP poisoning, although they can be used for other purposes, such as packet analysis, network communication, and port scanning. References: The Official CompTIA PenTest+ Student Guide (Exam PT0-002) eBook, Chapter 5, Section 5.2.1: ARP Poisoning; Best PenTest+ certification study resources and training materials, Section 2: ARP Poisoning.

## NEW QUESTION # 72

A penetration tester has prepared the following phishing email for an upcoming penetration test:

Which of the following is the penetration tester using MOST to influence phishing targets to click on the link?

- **A. Authority and urgency**
- B. Scarcity and fear
- C. Familiarity and likeness
- D. Social proof and greed

**Answer: A**

## NEW QUESTION # 73

SIMULATION

You are a penetration tester running port scans on a server.

INSTRUCTIONS

Part 1: Given the output, construct the command that was used to generate this output from the available options.

Part 2: Once the command is appropriately constructed, use the given output to identify the potential attack vectors that should be investigated further.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

□

**Answer:**

Explanation:

Part 1 - 192.168.2.2 -O -sV --top-ports=100 and SMB vulns

Part 2 - Weak SMB file permissions

<https://subscription.packtpub.com/book/networking-and-servers/9781786467454/1/ch01lvl1sec13/fingerprinting-os-and-services-running-on-a-target-host>

## NEW QUESTION # 74

A penetration tester finished a security scan and uncovered numerous vulnerabilities on several hosts. Based on the targets' EPSS and CVSS scores, which of the following targets is the most likely to get attacked?

Host | CVSS | EPSS

Target 1 | 4 | 0.6

Target 2 | 2 | 0.3

Target 3 | 1 | 0.6

Target 4 | 4.5 | 0.4

- A. Target 3: CVSS Score = 1 and EPSS Score = 0.6
- B. Target 2: CVSS Score = 2 and EPSS Score = 0.3
- C. Target 4: CVSS Score = 4.5 and EPSS Score = 0.4
- **D. Target 1: CVSS Score = 4 and EPSS Score = 0.6**

**Answer: D**

Explanation:

Based on the CVSS (Common Vulnerability Scoring System) and EPSS (Exploit Prediction Scoring System) scores, Target 1 is the most likely to get attacked.

\* CVSS:

\* Definition: CVSS provides a numerical score to represent the severity of a vulnerability, helping to prioritize the response based on the potential impact.

\* Score Range: Scores range from 0 to 10, with higher scores indicating more severe vulnerabilities.

\* EPSS:

\* Definition: EPSS estimates the likelihood that a vulnerability will be exploited in the wild within the next 30 days.

\* Score Range: EPSS scores range from 0 to 1, with higher scores indicating a higher likelihood of exploitation.

\* Analysis:

\* Target 1: CVSS = 4, EPSS = 0.6

\* Target 2: CVSS = 2, EPSS = 0.3

\* Target 3: CVSS = 1, EPSS = 0.6

\* Target 4: CVSS = 4.5, EPSS = 0.4

\* Target 1 has a moderate CVSS score and a high EPSS score, indicating it has a significant vulnerability that is quite likely to be exploited.

Pentest References:

\* Vulnerability Prioritization: Using CVSS and EPSS scores to prioritize vulnerabilities based on severity and likelihood of exploitation.

\* Risk Assessment: Understanding the balance between impact (CVSS) and exploit likelihood (EPSS) to identify the most critical targets for remediation or attack.

By focusing on Target 1, which has a balanced combination of severity and exploitability, the penetration tester can address the most likely target for attacks based on the given scores.

## NEW QUESTION # 75

A penetration tester assesses an application allow list and has limited command-line access on the Windows system. Which of the following would give the penetration tester information that could aid in continuing the test?

- A. nltest.exe
- B. icacis.exe
- C. rundll.exe
- D. mmc.exe

**Answer: A**

Explanation:

When a penetration tester has limited command-line access on a Windows system, the choice of tool is critical for gathering information to aid in furthering the test.

mmc.exe (Microsoft Management Console):

Primarily used for managing Windows and its services. It's not typically useful for gathering information about the system from the command line in a limited access scenario.

icacis.exe:

This tool is used for modifying file and folder permissions. While useful for modifying security settings, it does not directly aid in gathering system information or enumeration.

nltest.exe:

This is a powerful command-line utility for network testing and gathering information about domain controllers, trusts, and replication status. Key functionalities include:

Listing domain controllers: `nltest /dclist:<DomainName>` Querying domain trusts: `nltest /domain_trusts`

Checking secure channel: `nltest /sc_query:<DomainName>`

These capabilities make nltest very useful for understanding the network environment, especially in a domain context, which is essential for penetration testing.

rundll.exe:

This utility is used to run DLLs as programs. While it can be used for executing code, it does not provide direct information about the system or network environment.

Conclusion: nltest.exe is the best choice among the given options as it provides valuable information about the network, domain controllers, and trust relationships. This information is crucial for a penetration tester to plan further actions and understand the domain environment.

## NEW QUESTION # 76

.....

Many exam candidates feel hampered by the shortage of effective PT0-003 preparation quiz, and the thick books and similar materials causing burden for you. Serving as indispensable choices on your way of achieving success especially during this PT0-003 Exam, more than 98 percent of candidates pass the exam with our PT0-003 training guide and all of former candidates made measurable advance and improvement.
