NCA-6.10 Valid Exam Question - Exam NCA-6.10 Testking

The prep material created by the ExamBoosts are the best choice because we provide you with Nutanix NCA-6.10 exam preparation material in 3 different formats. This is helpful for you since every candidate has a different study style and the diversity of Nutanix Certified Associate v6.10 (NCA-6.10) exam preparation formats can aid the study pattern.

Nutanix Certified Associate v6.10 Sample Questions (Q28-Q33):

NEW QUESTION # 28

Which option is supported by Nutanix for Data-at-Rest encryption?

- A. Storage Pool-only Encryption
- B. Data-only Encryption
- **C. Software-only Encryption**
- D. Cluster-only Encryption

Answer: C

Explanation:

The correct answer is D. Software-only Encryption.

Nutanix supports Data-at-Rest Encryption (DARE) through both hardware-based and software-based methods. Among the supported solutions, software-only encryption is a widely used and officially supported method, especially when Self-Encrypting Drives

(SEDs) are not in use.

Key facts about Nutanix DARE:

- * Enables encryption of data written to physical media.
- * Works at the CVM and controller layer, ensuring all I/O is encrypted before being persisted.
- * Software-based encryption can be enabled via Prism Central or command-line using Native Key Management (NKM) or external KMIP-compliant key managers.
- * Hardware encryption (SED) is optional and not required for DARE.

Clarifications:

- * A. Storage Pool-only Encryption: Not valid; encryption applies at the cluster level, not only to storage pools.
- * B. Data-only Encryption: Ambiguous and not a Nutanix-supported term.
- * C. Cluster-only Encryption: Misleading; encryption is applied to data at rest, not to the "cluster" object.

Prism UI Navigation Path:

Settings > Security > Encryption

Official Reference:

- * Nutanix Security Guide - Data-at-Rest Encryption
- * Nutanix Bible - Encryption Section
- * Excerpt: "Nutanix supports software-only data-at-rest encryption using Native Key Management or external KMIP key managers, without requiring self-encrypting drives."

NEW QUESTION # 29

An administrator has spent time correcting specific issues that have been identified by NCC Health Checks in Prism Element. How can just the checks that previously did not pass be executed again to confirm they are all resolved?

- A. Run LCM Pre-Upgrade to trigger NCC Checks.
- **B. Select Only Failed And Warning Checks.**
- C. Select Run Check for each check worked.
- D. Run ncc health checks run_all.

Answer: B

NEW QUESTION # 30

What is true when adding a storage-only node to the cluster?

- **A. It must have the same hypervisor as the other nodes in the cluster.**
- B. It can have a different hypervisor than the other nodes in the cluster.
- C. Nutanix Files must be deployed.
- D. Nutanix Objects must be deployed.

Answer: A

Explanation:

The correct answer is C. It must have the same hypervisor as the other nodes in the cluster.

When adding a storage-only (SO) node to a Nutanix cluster:

- * It must run the same hypervisor as the existing nodes.
- * The SO node does not host VMs but participates in the storage layer to increase capacity and performance.
- * Nutanix currently does not support mixed hypervisors (e.g., combining AHV with ESXi) within the same cluster, even for storage-only nodes.

Clarifications:

- * A & B: Neither Nutanix Files nor Objects are required for adding storage-only nodes.
- * D: Cross-hypervisor configuration is unsupported at the cluster level.

Official Reference:

- * Nutanix Hardware Administration Guide - Storage-Only Node Requirements
- * Excerpt: "All nodes in a cluster, including storage-only nodes, must run the same hypervisor type."

NEW QUESTION # 31

An administrator needs to create a VM Template from an existing VM.

What is required for this action to be successful?

- A. Sysprep or Cloud-init script.
- **B. The VM is powered off.**
- C. Windows OS is installed.
- D. The VM is powered on.

Answer: B

Explanation:

To create a VM template from an existing VM in Nutanix, the VM must be powered off. This ensures that the template is consistent and does not include any transient data or activity from the VM. Once the VM is powered off, the administrator can use the Prism UI to take a snapshot and designate it as a template.

- * A. Sysprep or Cloud-init script: These are optional for post-deployment configuration, not mandatory for creating a template.
- * B. The VM is powered on: This is incorrect, as the VM must be powered off.
- * C. Windows OS is installed: The OS type is irrelevant for creating a template.
- * D. The VM is powered off: Correct, as creating a template requires the VM to be in a powered-off state.

NEW QUESTION # 32

Which storage protocol is supported for a datastore when using ESXi as the hypervisor within a Nutanix cluster?

- A. iSCSI
- **B. NFS**
- C. SMB
- D. LVM

Answer: B

Explanation:

When using ESXi as the hypervisor in a Nutanix cluster, the supported storage protocol for a datastore is NFS (Network File System). Nutanix exposes its distributed storage to ESXi hosts using NFS for VM storage.

This protocol is simple to configure and provides high performance and reliability through Nutanix's data services.

Other options:

- * iSCSI: Not typically used for ESXi datastores but can be utilized for specific use cases like external storage connectivity.
- * SMB: Not supported for ESXi datastores.
- * LVM: Logical Volume Management is not used in this context.
