Dumps Tests NCP-DB-6.10 valid exam dumps will help you pass the actual test at first time, and you do not try again and again. Try the Nutanix NCP-DB-6.10 free demo and assess the validity of our NCP-DB-6.10 practice torrent. You will enjoy one year free update after purchase of Nutanix study dumps. The comprehensive contents of NCP-DB-6.10 Pdf Dumps will clear your confusion and ensure a high pass score in the real test.

Getting an authoritative IT certification will make a great difference to your career like NCP-DB-6.10 exam tests. The difficulty and profession of real questions need much time and energy to prepare, which can be solved by our NCP-DB-6.10 dumps torrent. The latest training materials are tested by IT experts and certified trainers who studied NCP-DB-6.10 Exam Questions for many years. The high quality of our vce braindumps are the guarantee of high passing score.

Test NCP-DB-6.10 Simulator Fee & Valid NCP-DB-6.10 Test Guide

To become more powerful and struggle for a new self, getting a professional NCP-DB-6.10 certification is the first step beyond all questions. We suggest you choose our NCP-DB-6.10 test prep ----an exam braindump leader in the field. Since we release the first set of the NCP-DB-6.10 quiz guide, we have won good response from our customers and until now---a decade later, our products have become more mature and win more recognition. And our NCP-DB-6.10 Exam Torrent will also be sold at a discount from time to time and many preferential activities are waiting for you.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q179-Q184):

NEW QUESTION # 179

In an Oracle upgrade scenario using Era, if the source database is on a non-Nutanix platform, is it possible to upgrade it with an Era workflow?

- A. No, the database instance must be Era managed to be upgraded
- B. Yes, only if the non-Nutanix platform is big-endian platform,
- C. Yes, only if the non-Nutanix platform is little-endian platform.
- D. Yes, it is possible to upgrade database instance on a non-Nutanix platform.

Answer: A

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, Nutanix Era is a database management tool that automates and simplifies database operations, including provisioning, patching, upgrading, and more. However, for a database to be managed by Era, it must be registered with Era. This means that if a database is on a non-Nutanix platform, it cannot be directly

upgraded using an Era workflow. It must first be migrated to a Nutanix platform and registered with Era before it can be managed and upgraded using Era.

NEW QUESTION # 180

An administrator needs the ability to clone a source database to a point in time. What is the lowest log frequency in minutes that can be configured in the Era IJI for log catchup operation?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The log frequency in the Era IJI for log catchup operation can be configured to as low as 5 minutes. This allows the system to capture changes to the database at a high frequency, enabling more precise point-in-time recovery options. However, it's important to note that a higher frequency of log catchup operations can lead to increased system load. Therefore, the optimal frequency may vary depending on the specific requirements and capabilities of your system.

Please refer to the Nutanix Database Automation (NCP-DB) Learning documents for more detailed information.

NEW QUESTION # 181

An administrator would like to provide a group of users the ability to add a new VLAN or IP Pool in Era. What minimum role should the administrator assign to this group?

- **A. Infrastructure administrator**
- B. Super Admin
- C. Database Admin
- D. Database Infrastructure Admin

Answer: A

Explanation:

In Nutanix Era, the ability to add a new VLAN or IP Pool is typically associated with the role of an Infrastructure Administrator. This role has the necessary permissions to manage network configurations, including the creation of VLANs and IP Pools. It's important to note that the exact permissions may vary depending on the specific configuration and policies of your organization.

NEW QUESTION # 182

An administrator manages an multi-cluster NDB instance with HA enabled. After failure, more than one API server VM is down. How should the administrator restore full functionality?

- A. Manually distribute connections across remaining clusters.
- B. Restart all database server VMs as NDB HA only tolerates single API server failure.
- **C. Ensure at least one API server VM is online; the rest will recover automatically.**
- D. Call Nutanix support to reset all API server connections.

Answer: C

Explanation:

In a multi-cluster NDB instance with HA enabled, the NDB architecture includes multiple API server VMs to ensure availability. If more than one API server VM is down after a failure, the administrator should ensure at least one API server VM is online. NDB's HA design tolerates multiple API server failures as long as one remains operational, and the remaining VMs will recover automatically through the HA failover mechanism. This leverages Nutanix's distributed architecture and self-healing capabilities to restore full functionality without manual intervention beyond ensuring one VM is running.

NEW QUESTION # 183

An administrator originally configured the storage for an Oracle database running on Nutanix NDB using ASMLib. The administrator would like to scale the size of the database. What should the administrator do to most efficiently increase the size of the database?

- A. Create a new, larger database and migrate.
- B. Extend the size by adding new vDisks.
- C. Mount an iSCSI LUN and extend the database onto the new LUN.
- **D. Leverage the scaling ability built into NDB to resize existing vDisks.**

Answer: D

Explanation:

When an administrator needs to scale the size of an Oracle database running on Nutanix NDB and originally configured using ASMLib (Automatic Storage Management Library), the most efficient approach is to use NDB's built-in scaling ability to resize existing vDisks. NDB supports dynamic resizing of virtual disks (vDisks) associated with database VMs, allowing the administrator to increase storage capacity without disrupting the database or requiring complex migrations. This method leverages Nutanix's storage integration, resizing the underlying vDisks and updating the ASMLib configuration to reflect the new size, ensuring seamless operation.

NEW QUESTION # 184

.....

The advent of our NCP-DB-6.10 exam questions with three versions has helped more than 98 percent of exam candidates get the certificate successfully. They are the PDF version, Software version and the APP online version which are co-related with the customers' requirements. All content of our NCP-DB-6.10 Exam Materials are written based on the real exam specially. And NCP-DB-6.10 simulating questions are carefully arranged with high efficiency and high quality. Besides, NCP-DB-6.10 guide preparations are afforded by our considerate after-sales services.
