AgilePM-Practitioner模擬対策問題 & AgilePM-Practitioner試験準備

Jpexam現在、仕事の要件は過去のどの時期よりも高くなっています。ほとんどの仕事は働く能力と深い主要な知識の両方を必要とするため、ジョブハンターは大きなプレッシャーに直面しています。AgilePM-Practitioner試験に合格すると、理想的な仕事を見つけることができます。AgilePM-Practitionerテスト準備を購入する

と、AgilePM-Practitioner試験に簡単かつ正常に合格し、理想の仕事を見つけて高収入を得ることが夢であることに気付くでしょう。当社APMG-InternationalのAgilePM-Practitionerトレーニングブレイндаンプは高品質で、合格率とヒット率はいずれも98%を超えています。

APMG-International Agile Project Management (AgilePM) Practitioner Exam 認定 AgilePM-Practitioner 試験問題 (Q11-Q16):

質問 # 11

There are several tests planned throughout the project to ensure the solution is fit for purpose and to validate the business solution as it evolves.

Column 1 is a list of tests. For each test in Column 1, select from Column 2 the testing concept that it represents. Each selection from Column 2 can be used once, more than once or not at all.

Column 1

- 1) In order to get an objective view, the financial transaction function is to be tested by someone from Finance who has had no involvement in its development.
- 2) Before the developer works on the printing function for the policy documents, the Sales Manager will review a prototype of the online application form for the new coffee shop insurance product with the solution tester.
- 3) Security test scripts have been provided by the company 's bank. These scripts will be used to test the link from the company 's website to the banking system, which is to be developed specifically to achieve these tests
- 4.

The addition of the new coffee shop insurance product may threaten the stability of the existing website. As a primary route to market this is unacceptable. The website 's capacity to run additional pages is to be verified before any other tests are performed.

5.

The Must Have and Should Have requirements are to be tested before the Could Have requirements.

Column 2

- * Collaborative Testing
- * Repeatable Testing
- * Independent Testing
- * Prioritised Testing
- * Test-Driven Development

	A	B	C	D	E
1.	☐	☐	☐	☐	☐
2.	☐	☐	☐	☐	☐
3.	☐	☐	☐	☐	☐
4.	☐	☐	☐	☐	☐
5.	☐	☐	☐	☐	☐

正解:

解説:

	A	B	C	D	E
1.	☐	☐	☒	☐	☐
2.	☐	☐	☐	☐	☐
3.	☐	☐	☐	☐	☐
4.	☐	☐	☐	☐	☐
5.	☐	☐	☐	☐	☐

Explanation:

- * C. Independent Testing
- * A. Collaborative Testing
- * B. Repeatable Testing
- * D. Prioritised Testing
- * D. Prioritised Testing

Short Comprehensive Explanation :

- * Independent Testing is appropriate when someone from a different department (Finance) with no involvement in the development process conducts the testing to ensure an objective view.
- * Collaborative Testing involves various stakeholders, in this case, the Sales Manager and the solution tester, working together to review and test a prototype, promoting early feedback and shared understanding.
- * Repeatable Testing is used for security testing where predefined test scripts (provided by the bank) are applied to ensure the system meets specific security standards and can be repeated as needed.
- * Prioritised Testing is essential when the project 's stability and core functionality, such as the website 's capacity to handle new features, must be confirmed before other tests are conducted to ensure the most critical aspects are addressed first.
- * Again, Prioritised Testing is used to ensure that the essential requirements (Must Haves and Should Haves) are tested and validated before moving on to less critical ones (Could Haves), aligning with prioritization in Agile methodologies.

The Agile Project Management (AgilePM) framework and principles, as detailed in the AgilePM Practitioner documents and learning resources, guide the application of these testing concepts within an Agile project environment. These resources emphasize the importance of iterative development, stakeholder collaboration, and prioritization of work to ensure project success and alignment with business needs. Specific references to testing approaches and their application within Agile projects can be found in the official AgilePM handbook and practitioner-level training materials available through APMG International and affiliated training providers.

質問 # 12

Using the additional information provided for this question in the Scenario Booklet, answer the following questions about the requirement for a fire exit from the upstairs of the building.

What is an appropriate reason to classify the need for a secondary exit from the upstairs of the building as a Must Have requirement?

- A. A secondary exit from the upstairs of the building will provide a shorter and more direct route into the garden than the main stairway.
- B. The requirement for a secondary exit from the upstairs of the building has to be made a higher priority in order to be moved to an earlier Timebox.
- C. A secondary exit from the upstairs of the building would help ease congestion in busy periods during festivals.
- D. Provision of a secondary exit from the upstairs of the building will ensure compliance with national fire safety regulations.

正解: D

解説:

A: Provision of a secondary exit from the upstairs of the building will ensure compliance with national fire safety regulations.

Rationale:

Compliance with national fire safety regulations is non-negotiable and would be a legal requirement for the operation of the hotel. Therefore, any features required to meet these regulations would automatically be classified as "Must Have" due to their mandatory nature for safety and legal operation.

質問 # 13

The Web Content Manager has provided the Web Developer with a mock up of the 'Contact Us' page, to be created for the new coffee bar insurance product. When producing the code, the Web Developer has created a button that reads 'Delete' instead of 'Cancel'.

What action should the Web Content Manager take?

- A. Hide the problem and hope that this detail can be changed at a later date.
- B. Prepare a defence for when the problem is identified, ensuring the responsibility is with the Web Developer.
- C. Raise an issue to the Project Manager when the solution is deployed.
- D. Discuss the issue with the Web Developer and decide what action is required to change this detail.

正解: D

解説:

The most constructive and collaborative action the Web Content Manager should take is:

D: Discuss the issue with the Web Developer and decide what action is required to change this detail.

Direct communication and collaboration between the Web Content Manager and the Web Developer are essential in Agile environments to promptly address misunderstandings or mistakes. Discussing the issue openly allows for a quick resolution and ensures that the final product aligns with the project's requirements.

This approach fosters a positive working relationship, encourages shared responsibility for the project's success, and avoids unnecessary delays or conflicts.

質問 # 14

Which 2 actions should the Project Manager take to implement the new Must Have requirement?

- A. Add the tasks required to develop the new financial transaction functionality to the Delivery Plan.
- B. Check for any documented standards which need to be applied to the development of online financial transaction functionality.
- C. Update the Delivery Plan to show the new financial transaction functionality as a deliverable.
- D. Consolidate and circulate an agenda for the workshop.
- E. Source and hire a web developer with experience in developing online financial transaction functionality.

正解: A、C

解説:

To effectively implement the new Must Have requirement for financial transaction functionality on the coffee shop insurance product website, the Project Manager should focus on actions that align with their role in planning, execution, and team coordination. The following actions are most appropriate for the Project Manager:

Selected Actions for the Project Manager:

B; Add the tasks required to develop the new financial transaction functionality to the Delivery Plan.

C; Update the Delivery Plan to show the new financial transaction functionality as a deliverable.

B: Integrating the tasks necessary for developing the new functionality into the Delivery Plan is crucial. This ensures that all project activities are accounted for and scheduled, which helps in managing the project's timeline and resources effectively.

C: Reflecting the new financial transaction functionality as a deliverable in the Delivery Plan is important for clarity and focus. It signifies the inclusion of this functionality as a critical component of the project's scope, guiding the team's efforts and priorities.

Why Other Actions Are Less Suitable:

A: While ensuring adherence to documented standards is important, it is typically a collaborative effort involving the Technical Coordinator and Solution Development team, in addition to the Project Manager, to ensure technical compliance.

D: Sourcing and hiring specific expertise, such as a web developer skilled in online financial transactions, is indeed part of the Project

Manager's responsibilities. However, the actions related to the Delivery Plan (options B and C) are more directly aligned with the immediate steps for implementing a new requirement in the project's scope.
E: Consolidating and circulating an agenda for the workshop is a logistical task that the Project Manager might oversee or delegate. However, the actions related to planning and updating the Delivery Plan are more critical to the successful implementation of the new requirement.

質問 # 15

For cognitive learning, which is the BEST example of providing ' learning feedback ' ?

- A. Reviewing learners' ideas in a group discussion.
- B. Discussion at the learners ' next annual performance reviews.
- C. Giving supervisor feedback on return to work.
- D. Testing before and after learning.

正解: A
