## Pass-Rate AZ-104 Reliable Exam Simulations & Passing AZ-104 Exam is No More a Challenging Task

Our product boosts many advantages and varied functions to make your learning relaxing and efficient. The client can have a free download and tryout of our AZ-104 exam torrent before they purchase our product and can download our study materials immediately after the client pay successfully. AZ-104 exam question provides the free update and the discounts for the old client and our experts check whether our test bank has been updated on the whole day and if there is the update the system will send the update automatically to the client. Thus you can have an efficient learning and a good preparation of the exam. It is believed that our AZ-104 latest question is absolutely good choices for you

The AZ-104 Certification Exam is a great way for professionals to demonstrate their Azure administration skills and knowledge. It is an industry-recognized certification that can help candidates advance their careers in the Azure administration field. Microsoft Azure Administrator certification exam is also a stepping stone for other Microsoft Azure certifications, such as the Azure Solutions Architect and Azure DevOps Engineer certifications.

## Microsoft Azure Administrator Sample Questions (Q346-Q351):

**NEW QUESTION # 346**
You have an Azure virtual machine that runs Windows Server 2019 and has the following configurations:
Name: VM1
Location: West US
Connected to: VNET1
Private IP address: 10.1.0.4
Public IP address: 52.186.85.63

DNS suffix in Windows Server: Adatum.com
You create the Azure DNS zones shown in the following table.
You need to identify which DNS zones you can link to VNET1 and the DNS zones to which VM1 can automatically register.
Which zones should you identify? To answer, select the appropriate options in the answer area.

**Answer:**

Explanation:
Reference:
https://docs.microsoft.com/en-us/azure/dns/private-dns-overview

**NEW QUESTION # 347**
You plan to use Azure Network Watcher to perform the following tasks:
* Task1: Identify a security rule that prevents a network packet from reaching an Azure virtual machine
* Task2: Validate outbound connectivity from an Azure virtual machine to an external host Which feature should you use for each task? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:
Task 1: IP flow verify
The IP flow verify capability enables you to specify a source and destination IPv4 address, port, protocol (TCP or UDP), and traffic direction (inbound or outbound). IP flow verify then tests the communication and informs you if the connection succeeds or fails. If the connection fails, IP flow verify tells you which security rule allowed or denied the communication, so that you can resolve the problem.
Task 2: Connection troubleshoot
The connection troubleshoot capability enables you to test a connection between a VM and another VM, an FQDN, a URI, or an IPv4 address. The test returns similar information returned when using the connection monitor capability, but tests the connection at a point in time, rather than monitoring it over time.

https://docs.microsoft.com/en-us/azure/network-watcher/network-watcher-ip-flow-verify-overview
https://docs.microsoft.com/en-us/azure/network-watcher/network-watcher-connectivity-overview

**NEW QUESTION # 348**
You need to prepare the environment to ensure that the web administrators can deploy the web apps as quickly as possible.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:
Explanation

**NEW QUESTION # 349**
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure virtual machine named VM1 that runs Windows Server 2016.
You need to create an alert in Azure when more than two error events are logged to the System log on VM1 within an hour.
Solution: You create an Azure Log Analytics workspace and configure the data settings. You install the Microsoft Monitoring Agent

on VM1. You create an alert in Azure Monitor and specify the Log Analytics workspace as the source.
Does this meet the goal?

- A. No
- B. Yes

**Answer: B**

Explanation:
Alerts in Azure Monitor can identify important information in your Log Analytics repository. They are created by alert rules that automatically run log searches at regular intervals, and if results of the log search match particular criteria, then an alert record is created and it can be configured to perform an automated response.
The Log Analytics agent collects monitoring data from the guest operating system and workloads of virtual machines in Azure, other cloud providers, and on-premises. It collects data into a Log Analytics workspace.

https://docs.microsoft.com/en-us/azure/azure-monitor/learn/tutorial-response
https://docs.microsoft.com/en-us/azure/azure-monitor/platform/agents-overview

## NEW QUESTION # 350

You have an Azure Active Directory (Azure AD) tenant named contosocloud.onmicrosoft.com.
Your company has a public DNS zone for contoso.com.
You add contoso.com as a custom domain name to Azure AD.
You need to ensure that Azure can verify the domain name.
Which type of DNS record should you create?

- A. NSEC
- B. TXT
- C. DNSKEY
- D. PTR

**Answer: B**

Explanation:
Explanation
TXT : Correct Choice
You need to go to your hosting domain registrar and add in a TXT record.
NSEC3 : Incorrect Choice
This is Part of DNSSEC. This is used for explicit denial-of-existence of a DNS record. It is used to prove a name does not exist.
RRSIG : Incorrect Choice
This contains a cryptographic signature.
DNSKEY : Incorrect Choice
This will verify that the records are originating from an authorized sender.
